SW-Announce

RCR

Bugtrack

Support

Salestalk

Our mailing lists are managed by a program called Majordomo.

You can get a list of commands that Majordomo supports by sending an email message with a single line "help" to majordomo@dieboldes.com.

If have questions about using Majordomo or setting up your email, contact Josh Gardner and he will be happy to help you out.

The lists are closed to Diebold Election Systems staff. Do not CC customers when posting to the lists, or forward messages from the lists to customers without permission.

Lists we maintain are:

Announce

announce@dieboldes.com

The announce list is for general announcements. Submissions to announce should be of the "notice" variety -- much like a company bulletin board. The Diebold Election Systems Newsletter and press releases are good examples. Messages sent to the announce list should not be followed up on the announce list. If you have a question, bug, or feature request, send them to the appropriate list, not announce. The exception to this would be the original submitter correcting errors in the announcement.

SW Announce

sw-announce@dieboldes.com

The sw-announce list is for announcements of

new software releases. Submissions to sw-announce include a description of the changes in the software release, and the passwords to retrieve the release from our ftp site. Posting to the sw-announce list is restricted to the development group. If you have a support question, bug, or feature request related to a recent software announcement, send them to the appropriate list, not sw-announce.

RCR

The RCR list is only available as a historical archive. New messages cannot be posted; all RCRs should be submitted through Bugzilla. RCRs will not receive attention without a Bugzilla submission.

RCR submissions must contain:

1) A subject line that contains a synopsis of the request.
2) The account requesting the feature, if applicable.
3) The motivation for the request - why it is needed.
4) A detailed description of the change or enhancement.
5) The date the request is needed, and the nature of the deadline.

An RCR submission must describe only one new feature or enhancement. Minor related items can slide in of course, but unrelated features are verboten. In particular, do not forward "feature request lists" submitted by customers. Sort out the requests and submit them as separate posts.

The subject line is critical. "New Report" is not an acceptable subject line for a RCR submission. The development group uses the subject line to track the status of the feature. We will lose your submission without a

proper subject line. If you have something to contribute to the discussion, be sure to do it using the same subject as the original submission.

The description and motivation part of the RCR are important. The better job you do in describing how you would like the software to work, the better chance development has at satisfying your request. The submission must contain both the why and the how of the feature. That is, a RCR defines a solution to a problem, not just the problem itself. It is not enough to say that the software needs to be able to do so-and-so. You need to tell the developers how you want it to look and work. Think of an RCR as a mini-design document. Now, you don't have to get carried away: some requests are fairly self-evident, and the developers can work with you to get the fine strokes worked out. Just remember that if you don't know how the product would look after the problem is solved, the developers probably don't either. Feature development is a dynamic collaborative process. If there are details of the new feature that are not obvious or there is more than one way to solve the problem, this will result in follow-ups to the original submission. If the missing details are not provided or there is no consensus on a preferred solution, this will stall the development process. Everyone is welcome to submit input on a request.

Bugtrack

The bugtrack list is only available as a historical archive. New bugs should be submitted though Bugzilla. Bugs will not receive attention without a Bugzilla submission.

Bugtrack submissions must contain:

1) A subject line that contains a synopsis of the bug.
2) The version of the software that contains the bug and the version in which the bug first appeared.
3) A description of the bug, including all error messages.
4) A test case and steps necessary to reproduce the bug.

A bugtrack submission must describe only one bug. It is possible for the same bug to manifest itself in more than one way, and this may result in more than one report, but single posts with unrelated bugs will be ignored. In particular, do not forward "bug lists" submitted by customers. Sort out and reproduce each bug, then post separate reports.

The subject line is critical. "GEMS 1.14.7.1 problem" is not an acceptable subject line for a bugtrack submission. The development group uses the subject line to track the status of the bug. We will lose your request without a proper subject line. If you have something to contribute to the discussion, be sure to do it using the same subject as the original submission.

If you did not catch the exact error message or were not actually present when the bug appeared, then reproduce the bug yourself and write down the details before posting. If you are not sure in which version the bug first appeared, narrow it down by testing earlier releases.

Development must be able to reproduce a bug in order to fix it. If you cannot reproduce the problem, it is very unlikely that development will be able to reproduce it either. Keep one or more toy databases you know worked in previous releases handy for testing. If a bug

manifests itself in one database but not another, determine what settings trigger the problem by comparing the differences between the database that works and the one that doesn’t. Start with the working database and then make changes until it breaks. Try to narrow your test case to a minimal database that exhibits the problem. Specifically, don’t post a 2MB 1000-precinct VIBS database if a one-precinct one-race database also fails.

Support

support@dieboldes.com

The support list is for operations related discussion that is not otherwise bugs or feature requests. If you don't know if your question is a bug or rcr, post to support and ask. The issue can always be escalated to those lists later. All development and ESD personnel are welcome and expected to respond to this list if they know the answer or have something to contribute to the discussion. It is always better to send a question to the support list, even if you think it is simple or stupid. If you don't know the answer to the question, the chances are other people on the list don't know the answer either, and would also gain from seeing the response. Even if you know full well that there is only one person who knows the answer to your question, again post it to the support list, not him or her. Chances are very good that you are not the only one who needs to know the answer, or will need the answer three weeks from now. Consider the support list as a repository of communal knowledge.

Salestalk

salestalk@dieboldes.com

The salestalk list is for discussion regarding

sales and selling-related topics. This includes questions about sales prospects, material for RFPs, status updates, and whatever else it is that sales people talk about.

Mailing lists back up

- **To**: <announce@dieboldes.com>
- **Subject**: **Mailing lists back up**
- **From**: **"Ken Clark"** <ken@dieboldes.com>
- Date: Tue, 26 Jan 1999 16:20:47 -0600
- Importance: Normal

Our server machine responsible for (among other things) the mail server and mailing lists was the victim of an Internet attack yesterday. I have spend most of the last couple of days getting things back to normal.

The mail server was restored this morning, and the mailing list and ftp site should now be functional again. I unfortunately had to reconstruct the members of the mailing lists from memory, so I suspect at least someone got inadvertadly dropped (of course, if you were such a person, you wouldn't be reading this). If you talk to anyone who thinks he/she is not getting any messages from the lists, they are probably correct. Get them to either send me an email, or just subscribe themselves using majordomo (as described in a mail a week or two ago).

Sorry for any inconvenience folks.

Ken Clark

Mailing List Descriptions

- **To**: <**announce@dieboldes.com**>
- **Subject**: **Mailing List Descriptions**
- **From**: **"Ken Clark" <ken@dieboldes.com>**
- Date: Wed, 27 Jan 1999 09:56:31 -0600
- Importance: Normal

This message was sent in December, but I think it is probably a good idea if I re-send it every once in a while. Even if you think you have seen this message before, please take a few minutes to read it. Following the guidelines here will make it easier for support and development to respond to your messages.

announce@dieboldes.com

This list is for general announcements. Software releases and status updates in particular are sent to this list. You can post an annoucement about whatever you think is of interest here. In general, messages sent to the announce list are **not** followed up on the announce list. If you have a support or RCR related question that relates to a software announcement, post a follow up to those lists, not the announce list. The exception to this would be the original poster correcting errors in the announcement.

support@dieboldes.com

All support related discussion should be sent here. These include questions about our hardware and software, bug reports, information on upcoming and past elections, etc. Everyone is allowed and expected to respond to questions on the support list if they know the answer, or have something to contribute to the discussion. It is always better to send a question to the support list, even if you think it is simple or stupid. If you don't know the answer to the question, the chances are other people on the list don't know the answer either,

and would also gain from seeing the response. Since all lists are archined, we can use the archive to build a database of questions and answers for solving support problems.

rcr@dieboldes.com

Requests for changes to our software product should be sent here.

I am not very concerned with the format of people's RCRs as I am with the content. All RCRs need the following information:

- Submitter's name.
- A one line synopsis (title of the request).
- Why it is needed.
- Detailed description of the change or enhancement.

If the RCR is needed for a particular election, then the request also requires:

- What jurisdiction needs it (i.e. what county).
- What election it is needed for. When the ballots are due for the election, when early voting starts, and when election day is.

Each RCR must contain only one request. Minor related items can slide in of course, but unrelated items are a definite no-no. Bug fixes are not RCRs. Send bug fix requests to the support mailing list, or directly to your favorite developer. Small enhancements can also be sent to the support mailing list, and will get as much attention as RCRs. RCRs should be of a "project" nature. Adding a button or a field to the user interface because it would make the software more useable is usually not an RCR. Making GEMS or the Accu-Vote do something it didn't do before is definately an RCR. Use your judgement.

The description part of the RCR is the most important. The better job you do in describing how you would like the software to work, the easier (and quicker) it is to satisfy your request. Several RCRs that have been sent in have outstanding issues that need to be addressed before any work can be done. That is what the rcr@ mailing list is all about. Even if you did not submit the RCR, your are encouraged to follow up with your own ideas and suggestions as to how the change should work.

Remember a simple rule: A RCR defines a **solution** to a problem, not just the problem itself. It is not enough to say that the software needs to be able to do X. You need to tell the developers **how** you want it to look and work. Think of an RCR as a mini-design document. Now, you don't have to get carried away; some requests are fairly self-evident, and the

developers can work with you to get the fine strokes worked out. Just remember that if you don't know how GEMS would look after the problem is solved, the developers probably don't either.

For example, a reasonable request might be for GEMS to be able have "Vote Both Sides" printed on the ballots. Great. But how would you like that to work in GEMS? What dialog would the text be entered in? What options would there be? Would "Vote Both Sides" be printed even on single side ballots? In a multi-card ballot would it say "Vote Next Card?" Would the text be the same on all ballots, or could it be different on some? Would it take up all columns or just the last column? Would it be at the bottom of the card always, or right after the last race? This is just an example, but you get the idea.

If you feel your RCR has been lost in the noise, then follow up in the rcr@ mailing list asking for a status update. I will do my best to give RCR status reports when requested, if at least to say it is not being worked on currently. In general no-news is bad-news. The usual GEMS and Accu-Vote announcements on the announce@ mailing list will indicate when an RCR has been completed. We will also try to keep you informed as to what we are currently working on.

Accu-Vote Release 1.94f>

- **To**: **Announcements <announce@dieboldes.com>**
- **Subject**: **Accu-Vote Release 1.94f>**
- **From**: **Guy Lancaster <glanca@dieboldes.com>**
- Date: Wed, 27 Jan 1999 17:50:08 -0800
- Organization: Global Election Systems Inc.

For those romantics that fell in love with 1.94f, the latest flavor incorporates all the changes made since 1.94f<. This includes the changes in 1.94q, r, s, t*, and u. Pass your orders on to McKinney.

Guy

* Note: The PC 1.94t release was preempted by 1.94u.

Title: **Accu-Vote Release 1.94f>**

RELEASE NOTES

Accu-Vote 2000 - Release 1.94f>

Revised January 27, 1999

Purpose

To support multiple uploads per modem connection and to fix Accu-Vote lockup and other problems.

Compatibility

The 1.94f> release of the Accu-Vote firmware is based on the 1.94f< release. The precinct count upload protocol remains compatible with all 1.9x VTS versions. The precinct count download protocol and the memory cards are compatible with previous 1.94 releases.

Precinct Counter (PC) Release

- Allow multiple uploads per modem connection. When a modem upload is complete, the Accu-Vote still prompts with "RESULTS SENT OK - TURN UNIT OFF" but the modem connection is still up. To upload another memory card, ignore the prompt and pull out the memory card. The Accu-Vote will prompt you to "INSERT NEXT CARD". See the attached prompt diagram for details.
- The ballot sorting feature when using the feeder (used mostly for write-in ballots) has been disabled. In practice it has proved to reduce throughput too much to be warranted.
- Handle reader failures which occur in the first row or 2 of a ballot scan. Previous releases could appear to lock up or display an ISR message.
- Fix the handling of post-election memory card status values. Previous releases did not update the status beyond value 3 (shown in the audit report) which is for count finished but not uploaded.
- Fix handling of detected errors in Accu-Basic code. Previous releases could go into an infinite loop if the Accu-Basic program on the memory card was corrupted.
- Support absentee option 4 to mean "don't worry about precinct ID's on ballots". This means that if the Accu-Vote can determine a unique set of counters from just the card number, it will use those counters even if the precinct ID does not match. This is used by GEMS to implement absentee precincts that accept ballot cards from any precinct as long as the card number is recognized. The VTS absentee option 2 requires that the precinct ID begin with the digit '9' which could not be supported under GEMS.
- Offer to reprint the election results report if the report wasn't confirmed before turning the Accu-Vote off after the ender card in election mode. Since this report is "required", we require the operator to "confirm" that the report printed successfully by pressing NO to the prompt: "NEED ANOTHER PRINTOUT?". If not confirmed, the operator is prompted with "REPRINT ELECTION RESULTS REPORT?" upon entering the post-election mode. Responding with NO is treated as confirmation that the report has been printed successfully.
- Ballot error message delay can be aborted by pressing the NO button. This is most useful in the unvoted and fully voted ballot tests where you need to press the NO button to exit the test. If the last ballot fed was rejected, previously you had to wait until the message delay timed out before you could exit the test.
- Fixed bug that gave a port error if you responded NO to uploading either by phone or direct communications.
- Fix the problem whereby some units would occasionally reject a ballot and then lock up with the motor running in reverse.
- Fix problem whereby a ballot with a race having only write-in candidates would report "TCAND OVERFLOW".

- For single ballot primary ballots (primary election ballots with races from different parties), if the ballot is cross voted (i.e. races for different parties are voted), the Accu-Vote will no longer check for blank voted partisan races.
- If every race on a ballot is overvoted, the Accu-Vote will no longer reject the ballot as being unmarked.
- Memory cards will no longer be marked as corrupted. The memory card's data is checked on insertion and before each ballot is scanned and once a problem is detected, functionality will be restricted until the data again checks out correctly. Since most reports of memory card corruption are due to poor connection (dirty contacts or foreign material blocking the contacts), the memory cards were being incorrectly marked as corrupt.
- If an upload is interrupted before a connection is established, the Accu-Vote will no longer report that the upload was successful.

Versions

- (AE PC Rel 1.94f>) Precinct Counter American English Release 1.94f> with checksums A:97AF and B:06C1 dated 99-1-27.

Email is a convenient way to transfer information between people, including file attachments. Understand, however, that email was not designed to transfer large files because it is a "store and forward" system. That is, computers between our server and your machine may store your file before it is forwarded along to the next destination. Very large files can be rejected by machines along the way, or simply rejected due to a lack of disk space at any stop.

Our mail server had some problems this morning when it ran out of space. We are back running again, and the problem should not return because we have added considerably more storage.

Having said that, please keep your attachments "reasonable". There is a 3 megabyte limit on mails that go through our server. For anything larger than one meg, you should consider putting it in the /incoming directory of our ftp site. If you need instructions on how to do that, contact support.

Remember also to set up your mail client to "remove messages from server". This is usually the default setting. There is currently no limit on to your server mailbox size, so messages will just accumulate there forever if your client is not configured to remove them. Right now I don't think anyone is set up incorrectly, but it is a good fact to know.

New List in Town

- **To**: <**announce@dieboldes.com**>
- **Subject**: **New List in Town**
- **From**: **"Mike" <mike@dieboldes.com>**
- Date: Mon, 8 Feb 1999 11:20:06 -0600

There is a new List in town. The name: salestalk@dieboldes.com.
All you Salesmen (and women, Salespersons, whatever) out there looking for a good time can show up here.

To subscribe: Send a message with the following single line to majordomo@dieboldes.com

subscribe salestalk yourname@here.com

Yourname being your e-mail address.
Here being your email address, such as mike@dieboldes.com.

After you send your subscription away you will receive a notice of authentication.
Read the instructions, and send it back to Majordomo.
If you are still confused, you can call me **(mike@dieboldes.com)**

If you know of any sales people who are not currently on our announce list, please ask them to subscribe to that list as well so they can receive notices like this.

- Date: Tue, 9 Feb 1999 22:08:40 -0600

I added an ATFix Folder on our FTP site. Inside this Folder you will find 2 other Folders (ATNew, and ATOld). This is for obvious reasons, drivers, software updates, Etc... ATNew is for the new white Accutouches, and ATOld is for the Old black slabs.

Remember to Refresh your Browser or you may not see these new Folders.

Does anyone have experience using visible light readers with colored (most notably blue shade) ballots. Ian indicated at one point last year that we could print on one specific blue, but apparently you have to order a truck load of the same to make the cost of generating that specific color cost effective. Apparently shoting the ballots with blue ink is also very expensive. Short of striping ballots do we have an answer, for example Georgia that mandates a blue and green color ballot for primaries?

Mailing List Descriptions

- **To**: <**announce@dieboldes.com**>
- **Subject**: **Mailing List Descriptions**
- **From**: **"Ken Clark"** <**ken@dieboldes.com**>
- Date: Wed, 10 Feb 1999 10:09:25 -0600
- Importance: Normal

Okay, time for another "Mailing List Descriptions" post. Also time to stand on my soap box. This is not complicated kids. Announcements about your new born child goes to the announce@ list. Questions about why something is broken, how something works, or what is going on goes to the support@ list. Requests for new features in our software goes to the rcr@ list. Everything needs a subject.

This week's edition also adds the new list salestalk@dieboldes.com, plus devel@dieboldes.com which has been around forever wasn't included previously in this post because it is a closed list.

I am also open to the idea of closing salestalk@ to sales staff (I have talked to Rob about this) but in fairness that means we should create a closed support list as well. I have also considered adding a hardware@dieboldes.com for hardware related development. If you have any ideas on how the lists might be better organized, feel free to post to the support list (but you already knew that would be the right place).

Ken

announce@dieboldes.com

This list is for general announcements. Software releases and status updates in particular are sent to this list. You can post an announcement about whatever you think is of interest here. In general, messages sent to the announce list are **not** followed up on the announce list. If you have a support or RCR related question that relates to a software announcement, post a

follow up to those lists, not the announce list. The exception to this would be the original poster correcting errors in the announcement.

support@dieboldes.com

All support related discussion should be sent here. These include questions about our hardware and software, bug reports, information on upcoming and past elections, etc. Everyone is allowed and expected to respond to questions on the support list if they know the answer, or have something to contribute to the discussion. It is always better to send a question to the support list, even if you think it is simple or stupid. If you don't know the answer to the question, the chances are other people on the list don't know the answer either, and would also gain from seeing the response. Since all lists are archived, we can use the archive to build a database of questions and answers for solving support problems.

salestalk@dieboldes.com

Discussion regarding sales and selling-related topics. This includes questions about sales prospects, material for RFPs, status updates, and whatever else it is that sales people talk about.

devel@dieboldes.com

Software programming and design discussion. Closed to developers. Also contains some hardware related discussion currently for want of a better place (although Ian is not on the list right now).

rcr@dieboldes.com

Requests for changes to our software product should be sent here.

I am not very concerned with the format of people's RCRs as I am with the content. All RCRs need the following information:

- Submitter's name.
- A one line synopsis (title of the request).
- Why it is needed.
- Detailed description of the change or enhancement.

If the RCR is needed for a particular election, then the request also requires:

- What jurisdiction needs it (i.e. what county).
- What election it is needed for. When the ballots are due for the election, when early voting starts, and when election day is.

Each RCR must contain only one request. Minor related items can slide in of course, but unrelated items are a definite no-no. Bug fixes are not RCRs. Send bug fix requests to the support mailing list, or directly to your favorite developer. Small enhancements can also be sent to the support mailing list, and will get as much attention as RCRs. RCRs should be of a "project" nature. Adding a button or a field to the user interface because it would make the software more useable is usually not an RCR. Making GEMS or the Accu-Vote do something it didn't do before is definitely an RCR. Use your judgement.

The description part of the RCR is the most important. The better job you do in describing how you would like the software to work, the easier (and quicker) it is to satisfy your request. Several RCRs that have been sent in have outstanding issues that need to be addressed before any work can be done. That is what the rcr@ mailing list is all about. Even if you did not submit the RCR, your are encouraged to follow up with your own ideas and suggestions as to how the change should work.

Remember a simple rule: A RCR defines a **solution** to a problem, not just the problem itself. It is not enough to say that the software needs to be able to do X. You need to tell the developers **how** you want it to look and work. Think of an RCR as a mini-design document. Now, you don't have to get carried away; some requests are fairly self-evident, and the developers can work with you to get the fine strokes worked out. Just remember that if you don't know how GEMS would look after the problem is solved, the developers probably don't either.

For example, a reasonable request might be for GEMS to be able have "Vote Both Sides" printed on the ballots. Great. But how would you like that to work in GEMS? What dialog would the text be entered in? What options would there be? Would "Vote Both Sides" be printed even on single side ballots? In a multi-card ballot would it say "Vote Next Card?" Would the text be the same on all ballots, or could it be different on some? Would it take up all columns or just the last column? Would it be at the bottom of the card always, or right after the last race? This is just an example, but you get the idea.

If you feel your RCR has been lost in the noise, then follow up in the rcr@ mailing list asking

for a status update. I will do my best to give RCR status reports when requested, if at least to say it is not being worked on currently. In general no-news is bad-news. The usual GEMS and Accu-Vote announcements on the announce@ mailing list will indicate when an RCR has been completed. We will also try to keep you informed as to what we are currently working on.

Ken, I am 100% in favor of keeping salestalk open. Closing or restricting any of these sites serves to compartmentalize a company that is need of more communication not less.

And, for the ignorant like myself, I get more of an education everyday.

"John L. Mc Laurin" wrote:

> Has there been any further development on the status of our Accu Feed. I.e. - reliability, faster, new design?

Hi John and others:

We are currently awaiting a proposal from an engineering firm for a retrofit design for the current feeder. That proposal is scheduled to be in the latter part of this week. The retrofit design is to produce a retrofit for an existing Accu-Feed that will make it more reliable, not faster.

We are also requesting proposals for new designs of a faster ballot counting system, but the retrofit feeder design has priority at this time.

The faster ballot counting system design is in its conception stage (not even an infant yet). I have surveyed in-house marketing and in-house support staff on features for this design, which has served for the initial steps we needed to take for this project, but at this time I would like gather input from the field sales and field support staff. I will not list off the features that we have discussed so far as I want everybody to give me a fresh approach that is unrestricted.

Remember, be realistic about what you perceive as the needs of the customer. Technology can do a lot these days but it still can't perform miracles. If you want this thing to fly to the moon, it may take 10 to 20 years to design it at a +$1,000,000 product cost.

Think not only of technical features but also ergonomics (i.e., shape, size, weight, operator access

areas, operation flow, throughput, etc.). I want to see your responses in an organized list (e.g. with headings like Technical Features, Ergonomic Features, Marketing Features, etc.).

Each feature is to have a weighting factor as follows:

3 Have to have it,
2 Should have it, if it can be done,
1 Not really necessary, but it would be nice.

Only those responses that come in by Monday, February 22, 1999 will have a chance for consideration. This isn't short notice; you've probably already dreamed about what you want it to do, now put it to paper (or E-mail, which is just as good).

I thank you in advance for your contributions. I hope we can all work toward a feasible solution.

Sincerely:

Ian S. Piper

Hi John:

We're pretty restrictive on green colors too. For background colors, what is listed in the ballot spec is it.

In order to read blue pen marks, we needed the reader to emit a color of light that absorbs blue. That color of light is red (actually a pumpkin orange). This means that blue (and green ballots) look dark to the reader and it can't see light marks on a dark background.

Frank Kaplan has had experience with color striping. In the past, color striping has made the most economical sense.

Sincerely:

Ian

GEMS 1-5-3 is ready to download. The password is "5zjv7nabjtt6c".

Here are the latest updates:

1.5.3 Feb-11-99

- Fix ballot editor cut-and-paste of races with many (>8) candidate columns
- Fixed HeaderEditor where it fails to load the default language label when first started up.
- Added multiple printing option to SummaryReportDlg. A new Summary Report Print box will show the status of each report while printing.
- Added right and bottom timing mark numbers to Ballot Editor.
- Added messages to CIOException for Winsockets.
- Fixed problem with BufferedSockets infinite wait for data on close (Causing waitlock timeouts)
- Fixed problem with exception being thrown in CbufferedSocket destructor
- Added Logging to Regional Results server.

- **Subject**: **GEMS 1.5.7**
- **From**: **"Ken Clark" <ken@dieboldes.com>**
- Date: Fri, 19 Feb 1999 13:16:57 -0600
- Importance: Normal

Password is nfds8qweiusuy. Since the last public release (1.5.3) support for uploading Alameda databases from the AccuTouch over modem has been added, as well as some fixes to Summary Report that were introduced that release.

1.5.7 also contains some pretty radical changes to the poster. GEMS should no longer loose poster jobs if it crashes while jobs are still in the queue. You can test this by deliberately killing GEMS while feeding it memory cards on several machines. It would be a good idea to spend some time testing this feature.

1.5.7 Feb-19-99

- Fix Print Summary Report printing and HTML output (1.5.3)

1.5.6 Feb-18-99

- Poster crash recovery. If GEMS crashes which jobs are pending in the poster queue, they will be recovered when GEMS restarts.

1.5.5 Feb-15-99

- GEMS will now not report a precinct as returned until after the counters have actually reached the database
- Improve performance of posting upload jobs

1.5.4 Feb-12-99

- Regional upload now attempts to send an error message to Client if there is a problem.

Hello Everyone, I hope you are all are happy as can be:)
I have your Earthlink Accounts, they are active. Problem is I will be away
until the 28 of this month.
When I get back I will dish them out to those of you that feel they really
need them.

I am finding that some of you like the new PCS phones, and some of you are
scared of the new technology we are providing:)
If you have any problems with the new phones, or you are just curious,
e-mail me.(mike@dieboldes.com) I'm here to help out, not to make your life a
living hell. Send me your ideas, and I will see what I can do to make your
life less miserable.

Mike Brown

GEMS 1.5.8

- **To**: <announce@dieboldes.com>
- **Subject**: **GEMS 1.5.8**
- **From**: **"Ken Clark"** <ken@dieboldes.com>
- Date: Wed, 24 Feb 1999 10:44:57 -0600
- Importance: Normal

Password is ots63msdrpwfn. The reset mem card bug is potentially serious, but probably won't effect anyone. Memory cards were not being reset to not programmed when exiting election mode, and as a result the version number would not be incremented when they were reprogrammed after entering again. Just make sure all your memory cards have been reprogrammed since the last time you entered election mode, and you will be okay.

The poster stuff has lasted a week without exposing any egregious errors, so I think 1.5.8 is pretty stable. The Programmers Choice(TM) releases are 1.5.2 and 1.5.8.

1.5.8 Feb-24-99

- Fix internal error in race editor when using district rotation in options tab (1.4.1).
- Fix bug where exiting election mode would not reset mem cards to not programmed (1.5.6)

Accu-Vote Releases 1.94v and 1.94f@

- **To**: **Announcements <announce@dieboldes.com>**
- **Subject**: **Accu-Vote Releases 1.94v and 1.94f@**
- **From**: **Guy Lancaster <glanca@dieboldes.com>**
- Date: Thu, 25 Feb 1999 11:11:21 -0800
- Organization: Global Election Systems Inc.

Our latest 1.94 releases have been rushed out to fix a bug that slipped out with 1.94u and 1.94f>. Namely, 1.94u and 1.94f> fail to detect unvoted ballots and therefore cannot return blank ballots.

By popular request we are also introducing an enhanced race identification display for ballots returned due to voting problems. If the Accu-Vote is programmed to display race numbers, it will now also display the full race title by scrolling the title across the display.

We have long wanted to have a better way to identify the race that caused the ballot return but most of the ideas considered have been very complicated and suffered serious tradeoffs. After much discussion, we have settled on scrolling the entire race title. The biggest problem with this solution is that the display ends with just the tail of the race title left on the display. If you miss a needed part of the message, you will need to re-feed the ballot to see the message again. Feel free to discuss this implementation on our support@ mailing list.

Send your orders to Ian in our McKinney office.

Title: **Accu-Vote Release 1.94v**

RELEASE NOTES

Accu-Vote 2000 - Release 1.94v

Revised February 25, 1999

Purpose

To fix bug which prevents returning unvoted ballots as blank.

Compatibility

The 1.94v release of the Accu-Vote firmware is based on the 1.94u release. The precinct count upload protocol remains compatible with all 1.9x VTS versions. The precinct count download protocol and the memory cards are compatible with previous 1.94 releases.

Precinct Counter (PC) Release

- Fix the problem causing the Accu-Vote to fail to detect unvoted ballots. This problem meant that unvoted ballots would not be returned even if the Accu-Vote was programmed to do so.
- When the Accu-Vote is programmed to display race numbers on ballot reject messages, it will now scroll the entire race name across the display. The message will look like:

  ```
  OVER VOTED RACE
  ........RACE # 32 : THE FULL RACE TITLE
  ```

  The characters after the 16th (the width of the display) will scroll in at the rate of 3 per second which will take on the order of 10 seconds for a race like "Governor and Lieutenant Governor". The ballot will be returned once the entire message has been displayed and then the normal message display time will apply with the end of the race title staying on the second display line.

Versions

- (AE PC Rel 1.94v) Precinct Counter American English Release 1.94v with checksums A:7F66 and B:DAEC dated 99-2-24.

Come on guys. Don't disseminate this kind of drivel. Here are the references.

http://kumite.com/myths/
http://ciac.llnl.gov/ciac/CIACHoaxes.html

Here's a hint. The email says that IBM and AOL announced the virus, yet
gives no reference to the announcement. And I would add that it

gives very
stupid advice: namely to not open "unable to deliver" messages,
which are
completely harmless.

Ken

Password is ns8cbwso9bfkt. Yet more bug fixes. This bi-weekly release nonsense will end tomorrow with Piedmont being completed. My apologies folks. As with all of the recent releases, stay at 1.5.2 unless you need something special.

1.5.10 Mar-1-99

- Fix export results selection dialog (1.5.3)
- Fix reset election and set-for-election clearing of results (1.5.9)

Title: **Accu-Vote Release 1.94w**

RELEASE NOTES

Accu-Vote 2000 - Release 1.94w

Revised March 15, 1999

Purpose

To replace the scrolling race title and distribute other fixes.

Compatibility

The 1.94w release of the Accu-Vote firmware is based on the 1.94w release. The precinct count upload protocol remains compatible with all 1.9x VTS versions. The precinct count download protocol and the memory cards are compatible with previous 1.94 releases.

Precinct Counter (PC) Release

- Replace the scrolling race title in ballot reject messages with a contracted title of the form "123:A RAC..TITLE" that does not delay the ballot return.
- Print the TEST ZERO REPORT in pre-election mode (except for the one printed as part of the download procedure) instead of the ZERO TOTAL REPORT.
- Handle aborting downloads while REQUESTING COMMUNICATION. Previously we weren't displaying any message until the NO button had been pressed twice and repeated aborts would give a port error.

Versions

- (AE PC Rel 1.94w) Precinct Counter American English Release 1.94w with checksums A:2163 and B:EB2B dated 99-3-14.

Title: **Accu-Vote Release 1.95d**

RELEASE NOTES

Accu-Vote 2000 - Release 1.95d

Revised March 15, 1999

Purpose

To meet requirements of the state of Minnesota which include reporting candidates in the order that they appear on the ballot (the rotated order) and printing the voting center and precinct names on the results tapes. This latest 1.95 release also incorporates the fixes made to the the 1.94 releases.

Compatibility

The 1.95d release of the Accu-Vote firmware is based on the 1.95c release. The precinct count

upload protocol remains compatible with all 1.9x VTS versions. The precinct count download protocol and the memory cards are NOT compatible with 1.94 or previous 1.95 releases and require a recent release of GEMS and 1.95 Accu-Basic (abo) files.

Precinct Counter (PC) Release

- Up to 48 characters (2 lines) of the voting center name is now downloaded along with the poll center ID. It can be accessed in Accu-Basic reports as VOTECTR.NAME as is done in the latest 195anoka.abo.
- When printing candidates in ballot order (%USEBALLOTORDER set to 1 in Accu-Basic), the Accu-Vote no longer sorts candidates according to their position on the ballot so that the order may be set by GEMS. This fixes problems with candidate order for multi-column races and landscape ballots.

- In ballot reject messages that display the race number, now also display a contracted race title of the form "123:A RAC..TITLE" to aid in identifying the race with the voting problem. (1.94w)
- Print the TEST ZERO REPORT in pre-election mode (except for the one printed as part of the download procedure) instead of the ZERO TOTAL REPORT. (1.94w)
- Handle aborting downloads while REQUESTING COMMUNICATION. Previously we weren't displaying any message until the NO button had been pressed twice and repeated aborts would give a port error. (1.94w)
- Fix the problem causing the Accu-Vote to fail to detect unvoted ballots. This problem meant that unvoted ballots would not be returned even if the Accu-Vote was programmed to do so. (1.94v)
- Fix the problem whereby some units would occasionally reject a ballot and then lock up with the motor running in reverse. (1.94u)
- Fix problem whereby a ballot with a race having only write-in candidates would report "TCAND OVERFLOW". (1.94u)
- For single ballot primary ballots (primary election ballots with races from different parties), if the ballot is cross voted (i.e. races for different parties are voted), the Accu-Vote will no longer check for blank voted partisan races. (1.94u)
- If every race on a ballot is overvoted, the Accu-Vote will no longer reject the ballot as being unmarked. ((1.94u)
- Memory cards will no longer be marked as corrupted. The memory card's data is checked on insertion and before each ballot is scanned and once a problem is detected, functionality will be restricted until the data again checks out correctly. Since most reports of memory card corruption are due to poor connection (dirty contacts or foreign material blocking the contacts), the memory cards were being incorrectly marked as corrupt. (1.94u)
- If an upload is interrupted before a connection is established, the Accu-Vote will no longer report that the upload was successful. (1.94u)

Versions

- (AE PC 1.95d) Precinct Counter American English Release 1.95d with checksums A:0CE3 and B:2F1F dated 99-3-14.

- Date: Thu, 18 Mar 1999 12:30:00 -0600
- Importance: Normal

As some of you already know, Microsoft has released Internet Explorer 5 today. We have not tested IE5 with GEMS yet (since its only been out for a few hours) but will be doing this testing shortly. There is no reason to believe GEMS will have any trouble with the upgrade, so if you want to jump the gun you are probably safe. Bear in mind, though, that IE5 doesn't have any earth-shatering new feature or fix that will make running elections any easier. Unless you are an Internet junkie you are better off just sticking with IE 4.

We will post the results of the testing and any pitfalls to the support list when we know.

- Importance: Normal

GEMS 1.7.3 is ready for consumption. Password is jnalpqw8921dj. This should be a fairly healthy release. GEMS 1.5.2 remains another good choice if you are not interested in some of the new features. Enjoy.

Ken

1.7.3 Mar-13-99

- Fixed problem with clearing Central Count Batches
- Improved how GEMS handles Accu-Touch results.

1.7.2 Mar-11-99

- Fixed upgrade problem in 1.7.1
- Fixed infinite loop problem when saving in Race Editor.

1.7.1 Mar-11-99

- Implemented Standard Import for importing data into GEMS from a standardized import format. This import method allows re-importing of the data, to update the election from whatever source generated the import file, only affecting those records that are added, deleted or changed and so only affecting those ballots/cards using those records.
- Implemented Export Card Data to export the data for BOD printing and/or importing into a Voter Registration system.
- Improved performace of generating ballots in large databases.

1.6.1 Mar-9-99

- Added download machine type (AT/AV) and its sorting functionality to the Vote Center page in Download Dialog.
- Fixed problem laying out ballot artwork when the same header appeares multiple time on the same card
- Fixed problems when upgrading from pre-0.90 databases.

- Importance: Normal

Password is d7fprbuk9erbh. The release just fixes a really stupid bug introduced by yours truly. Thanks to Greg for finding it.

Ken

1.7.4 Mar-22-99

- Ballot length buttons in Ballot Editor are disabled after cards are layed out.
- When creating or importing database, the election title will set to the name the user provided, without the directory path.
- Fix "path not found" bug in print artwork (1.6.1)

New List: bugtrack@dieboldes.com

- **To**: <announce@dieboldes.com>
- **Subject**: **New List: bugtrack@dieboldes.com**
- **From**: **"Ken Clark" <ken@dieboldes.com>**
- Date: Fri, 26 Mar 1999 15:53:24 -0600
- Importance: Normal

I have created a new list: bugtrack@dieboldes.com. This list is for reporting and tracking test results and bugs for our software products. In short, if you find a bug in our software, report it to this list. We created this list to make sure that bug reports are not lost in the general discussion and questions posted to support@dieboldes.com.

Everyone who is subscribed to the support list has been automatically subscribed to the bugtrack list. Not everyone on the support list will necessarily be interested in the traffic on the new list however. We will still continue to announce all fixes for our software in the release notes on the announce list, so you won't miss anything unless you are responsible for testing and support. Use majordomo to unsubscribe from the list if you like.

We have discouraged people from posting databases to the support list since it would be a waste of time and space to download customer databases to everyone. Only a very few people (usually one) will be responsible for some customer's database. We will maintain this policy for the support list. However, in keeping with the credo that a picture is worth a thousand words, I am going to allow **example** database dumps that demonstrate a bug to be attached to bug reports on the bugtrack list. These should be **minimal** databases that reproduce a given bug, not copies of customer databases with full precinct tables, graphics in the rich text, etc. I am thinking an order of 5-25kbytes here. People who post King or Pima databases to the list will be summarily executed.

- Date: Fri, 26 Mar 1999 17:07:03 -0600
- Importance: Normal

Password is gtsdy6dbkl3sv. Just some minor fixes this time.

Ken

1.7.5 Mar-26-99

- The report title field of Print Summary Report appends to the precinct name on the report, rather than replacing it.
- Regions can not be deleted after set-for-election.
- Race and candidate labels, and candidate type, are not allowed to change after set-for-election.
- Fixed the problem, which may be triggered after installing Internet Explorer 5, where candidate names are not shown on Race Editor candidate list.

AVTS-3-3-3

- **To**: **"announce" <announce@dieboldes.com>**
- **Subject**: **AVTS-3-3-3**
- **From**: **"Talbot Iredale" <tiredale@dieboldes.com>**
- Date: Tue, 27 Apr 1999 15:36:23 -0700

The AVTS-3-3-3 is now on the ftp site. The password is adj9s03ndksie.
This is for the Lake County election. This fixes the reporting problem on the PollBook, the database will need to be re-downloaded.
It also adds the Ballot Header and Ballot Footer to the BallotStation.

To get the jurisdiction name and the election name you will need to use GEMS-1-9-3 which now supports a multi line election header. The first line is parsed into the Election Name and the second line into the Jurisdiction name. Our intent to to combine these two fields together and have a single mutliline header.

I will post the GEMS-1-9-3 release in the next hour.

Bug in GEMS 1-5-1 and later

- **To**: **"announce" <announce@dieboldes.com>**
- **Subject**: **Bug in GEMS 1-5-1 and later**
- **From**: **"Talbot Iredale" <tiredale@dieboldes.com>**
- Date: Wed, 28 Apr 1999 17:18:34 -0700

To all staff;

A bug has been found in GEMS "Candidate Block Options" within the RaceEditor. If a candidate block width is specified that is less than the race width then the voting positions printed on the ballot art work will not match the data downloaded to the Accu-Vote. This option is usually used when trying to get candidate ovals to be place in the center of the ballot.

The solution to this problem is to ensure the candidate block width in the race editor is > 32. If you have already layed out ballots with this option and the ballots are printed then you will have to manually adjust the ballots so the ovals are back in the position as printed.

We are working on a fix presently and will release it as soon as possible.

Mary, Josh, Scott and I moved this weekend with great success excluding Ma Bell's land line installations. It appears I will be without FAX for a minimum of week. I will advise when the line is installed and back on line. The office number remains the same 904-672-0470. The fax number should stay the same as well.

Currently my email address is as above, not jmglobal@earthlink.net. If you have been sending me mail at jmglobal it has not and will not reach me. I anticipate this too will change in the very near future and will advise accordingly.

Finally, my beeper number is inactive at this time due to a loss of the same during the move. I will advise accordingly once it rears it's ugly head.

Happy Spring one and all.

GEMS 1.9.6 (TS Integration)

- **To**: <announce@dieboldes.com>
- **Subject**: **GEMS 1.9.6 (TS Integration)**
- **From**: **"Ken Clark"** <ken@dieboldes.com>
- Date: Fri, 21 May 1999 14:32:34 -0500
- Importance: Normal

GEMS 1.9.6 is the first public release to support the AccuVote TS. We will make a public AVTS 3.4.1 release shortly. Here are the relevant GEMS files and passwords:

GEMS-1-9-6.zip ntdg8hbbvdfpq
TSText-1-9-6.zip ohg5nhj9inrfe
GEMS-Reports-1-9-6.zip hg5fhcsdenjge

New this GEMS release is the TSText subdirectory. You will need to unzip TSText similar to GEMS-Reports. Databases *created* with GEMS 1.9.1 through 1.9.5 pre-releases will not be compatible with 1.9.6. 1.8.x and earlier databases should however upgrade to cleanly to 1.9.6.

GEMS 1.9.6 should be used only with AccuVote-TS 3.4.x. As features are added to the AccuVote-TS, the protocol between GEMS and the AccuTouch is likely to change. Until the AccuTouch-TS protocol stabilizes, you will need to be careful about using matching GEMS and TS releases. We will include compatibility information as we make new GEMS and TS releases.

GEMS 1.9.x and AccuVote-TS 3.4.x contains enough functionality to run simple elections. The GEMS integration is a work in progress and there are many features not yet implemented or have rough edges. The large projects remaining are:

- There currently isn't any version or consistency checking on upload. Right now results can upload will upload multiple times, instead of being rejected like the AccuVote. Results will be overwritten (not accumulated) so this is not in general too critical in a small election. The current Poll Book is basically a hack that will need reworking.
- Tracking write-in text. The names voters write-in are recorded by the TS, but not uploaded to GEMS currently.
- Challenged voters. The TS has the capability of recording ballots from challenged voters but not including those ballots in the election night totals produced at the polls. Those ballots will need to be added to the upload protocol, and a subsystem to manage those ballots added to

GEMS.

There are a number of smaller features that are also not complete. These will be added at a fairly rapid pace:

- Rotated ballots.
- Multi-Card paper ballots (ie all races must fit on one card, even if paper ballots aren't used).
- Multi-Language elections that also need paper ballots. Can be worked around with 1.9.6.
- Multi-Language elections that have party by-lines.
- Changing the number of columns on the TS ballot. Can be worked around with 1.9.6.
- Multiple ballots per report precinct (split precincts and closed primaries).
- Party Preference Races and Recall Races (Straight Party works).
- Greater than around 250 candidates in the election.

Other missing features or bugs are fair game for the rcr and bugtrack mailing lists respectively, although we ask you to tread lightly until the code has a chance to dry. Many features are not yet well tested, so make sure to do extensive L&A tests. We have run three successful elections on pre-releases of the integrated system, and expect to have many more.

Enjoy!

Ken

Changes since GEMS 1.7.5:

1.9.6 May-20-99

- Changed label "VoteFor" to "Vote For" in HTML Precinct Summary report.
- New GEMS menu: "Program Mem Cards v2" which is used to program AccuVote-TS super-disks.

1.9.5 May-19-99

- Support AccuVote-TS 3.4.1 download protocol.
- Multi language support for AccuVote-TS.
- Re-work of Ballot Station text. Requires new directory TSText which stores the text.
- Download rich text for voter groups (use with Straight Party on AccuVote-TS). No support for editing the rich text yet.
- Support download of write-in candidates.
- Support download of AccuVote-TS ballot layout. No editor to modify these values yet.
- Improved network communication error handling.

1.9.4 May-10-99

- Disable vote center's ID, region, race filter set, number of memory cards, and count method after election is set.
- Correctly filter the ballot and cards by report precinct category in the list controls and pre-election reports.
- Change error reported by manual entry for non-existent counters from "Vote Center is not in this region" to "No Counters Available to Modify"
- Report error "Missing Endorsement Race" in Program Memory Cards when a recount is performed and the endorsement race is missing from the recount race set.
- Fixed bug in summary of card quantity. Card Precinct IDs are determined correctly for vote centers that don't need them.
- Clear the deck list in the central count dialog when the server is stopped.
- Fix bug where user was not warned to save the artwork when a race or header was moved in the ballot or card editors.
- Fixed bug in calculating oval positions when using candidate justification and candidate margins.

1.9.3 Apr-27-99

- Added AccuVote-TS support for multi-line election titles.

1.9.2 Apr-25-99

- Added support for No Votes Cast warning on AccuVote-TS.

1.9.1 Apr-23-99

- This upgrade will add AccuVote-TS instruction headers to GEMS database for editing. These headers are now included in the AccuVote-TS download protocol.

1.8.1 Apr-15-99

- Race and candidate labels can again be changed after set-for-election. The 1.7.4 behavior is restored (1.7.5).
- Database loading will be performed normally, and the user has to provide the password upon opening.
- Improve posting and central count performance.
- Closing central count dialog while running now cleanly stops the ports.
- Fix bug in switching central count vote centers.
- Adding report precincts to any report precinct category will be prohibited after cards-printed.
- Fix "too few parameters" bug when deleting rotation districts.
- Added a locale id field to each language.
- Fixed UI behavior in Region and Language editors.
- Fixed bug where central count decks would appear in download dialog. (1.7.5)

- Don't print card id text outside cut marks on artwork printed without seperate ovals set.

- **From**: **"Whitman Lee"** <**whitman@dieboldes.com**>
- Date: Fri, 21 May 1999 16:47:03 -0700

AVTS-3-4-1.zip is up and the password is jaouvxhtbqkty. Here is this short "upgrade" instructions:

- Install IMark 1.1.3 AccuTouch on Ballot Station
- Import AccuTouch-TS.reg and delete old IMARK registry
- Delete all \My Election folders
- Rename \Program Files\IMARK directory to AccuVote-TS
- Install contents of AVTS-3-4-1. Ballot Station.exe in EBS, PollBook.exe in EPB, and Voter Card.dll in \Windows\System.
- Install AVTemplate.zip into \ProgramFiles\AccuVote-TS

You can also order AVTS InstallShield releases from Dallas when it is ready.

- Importance: Normal

BackOffice Small Business Server 4.5 has been released by Microsoft, and a free upgrade is offered to registered SBS 4.0 licenses. Details are at Microsoft. Please hold off on the upgrade until ESG gets a chance to do some testing. Someone from that group will post a follow up on the test results when they are complete.

We will continue to support SBS 4.0 for the forseeable future so there is not technical reason to upgrade yet. I expect Microsoft will discontinue SBS 4.0 shortly however, so new installs with use 4.5.

GEMS 1.10.2

- **To**: <announce@dieboldes.com>
- **Subject**: **GEMS 1.10.2**
- **From**: **"Ken Clark"** <ken@dieboldes.com>
- Date: Tue, 8 Jun 1999 16:04:28 -0500
- Importance: Normal

GEMS 1.10.2 is ready. Password is "rawhvj5igxw42". New in this release is central count performance improvements, support for rich voter group text, and support for AccuVote-TS 3.5.1. If none of these features thrill you, you might opt to stick with 1.9.6 or 1.7.5, which have a few more miles on them.

The central count work is actually a cumulation of work started in January. In preliminary testing in King County, the time required to fetch the oval positions for a new card has dropped from a worst case of more than a minute (the wait lock error) to less than half a second. We wish Mike and Sophia good luck in the CC test this week.

Here's the readme:

1.10.2 Jun-8-99

- Voter group editor now uses endorsement text defaults when generating the rich text.
- Change download protocol for TS 3.5.1.

1.10.1 Jun-3-99

- Automatically disable Race Editor vote-for field and reset it to 1 for straight party races.
- Disallow running another instance of GEMS if an election with same identifier is already opened.
- Added Ballot Layout options under AccuVote-TS setting box.
- Added language and RTF support to Voter Group labels.
- The Print Artwork dialog prints "proof only" as well as date and time for proof ballots.
- The id field in the candidate list control of the Race Editor now displays correctly.
- Added RaceRotationWithCards report.
- Central count performance improvements.

- Fix bug in central count where cards with the wrong election id were not being rejected. Support CC 2.00h protocol.
- Added support for multi-line election title in the pre-election reports.

Ken

  - **Thread**

TS 3.5.1

- **To**: <announce@dieboldes.com>
- **Subject**: **TS 3.5.1**
- **From**: **"Ken Clark"** <ken@dieboldes.com>
- Date: Tue, 8 Jun 1999 16:33:32 -0500
- Importance: Normal

AccuVote-TS 3.5.1 is ready. Password is "va3z8/tfiyqke". This release requires GEMS 1.10.2. Download from other GEMS releases will not work. With this release, the short list of missing features gets shorter. Most "normal" GEMS elections should now download correctly to the TS. If you find a database that does not, please post a test cast to the bugtrack list. We are proceeding on the bigger tasks of administrative interface cleanup and upload.

The readme was not posted for the 3.4.1 release, so here are both entries:

3.5.1 Jun-8-99

- Requires GEMS 1.10.2.
- Added smart card emulation dialog.
- Added support for race rotation
- Added support for split precincts.
- Added support for greater than 255 candidates in the election.
- Fixed problem with Audit Viewer when a trailing backslash is missing from the SysDir registry entry.

3.4.1 May-20-99

- Requires GEMS 1.9.6
- Added support for write-ins.
- Added support for multiple languages.
- Added support for straight party voting, and party names with candidates.
- Added support for changing ballot style definition.

Save the whales. Feed the hungry. Free the mallocs.

- **From**: **"Whitman Lee" <whitman@dieboldes.com>**
- Date: Fri, 18 Jun 1999 14:09:02 -0700

GEMS 1.10.3 is ready. Password is "lad073tm/p.sm".
Here's the readme:

1.10.3 Jun-18-99

- Fixed voter group editor where the party name was not able to entered into the name field (1.10.1).
- Fix bug in manual entry on AccuVote-TS counter batches.
- Fix bug in manual entry database query (1.10.2)
- Added Header Report to the pre-election report set.

- **From**: **"Whitman Lee"** <**whitman@dieboldes.com**>
- Date: Fri, 18 Jun 1999 14:11:35 -0700

AccuVote-TS 3.5.2 is ready. Password is "haqnd7j3kdifu". This release requires GEMS 1.10.3.

The readme is here:

3.5.2 Jun-18-99

- Elminiated ProtCounter, TestCounter and PublicCounter from the registry, also the System Total from the user interface.
- Fix PollBook to not display baseunits for reportunits when only one baseunit.
- Fix BallotStation to display Baseunit label rather than reportunit label at bottom of ballot.
- Keep the sequence number as 1 for all ballot results, challenge results and voter history files.
- Fixed bug in AdminView that election total was not updated when the form is loaded.

- **From**: **"Ken Clark" <ken@dieboldes.com>**
- Date: Tue, 29 Jun 1999 14:26:21 -0500
- Importance: Normal
- In-Reply-To: <0da301bec254$93c18fd0$0904a8c0@dieboldes.com>

GEMS 1.11.1 is ready. Password is "uegnh.uailrqk".

The critical upload bug fix is in there. Upgrade if you are running 1.8.1 or later.

There is a new button in the election setup dialog to change the election id. Change the election id whenever you create a new election based on a "template" database. This will ensure your election id is different than past elections.

Finally, check out the rich text endorsement candidate stuff. There is now an "endorsement width" field and "wrap candidate" flag under ballot options which replaces the old "short, long, none" endorsement text options. This width defines how much of the candidate text area is allocated to the party text. If you check the wrap candidate box, then the candidate text will wrap if there is not enough room for both the candidate and the endorsement. Previously, the text would just overlap. To get the old behavior, uncheck the wrap candidate box and set the endorsement width to something large.

Ken

1.11.1 Jun-29-99

- Added regenerate election id button to Election Setup.
- Fixed bug uploading on more than one port simultaneously (1.8.1)
- Added endorsement text width option, and wrap candidate label checkbox to Ballot Option.
- Changed the default Precinct Summary Report to not have Race Id checked.
- Fix bug in setting race to recalled (1.5.1).

AVTS 3.6.1 & GEMS 1.11.1

- **To**: <announce@dieboldes.com>
- **Subject**: **AVTS 3.6.1 & GEMS 1.11.1**
- **From**: **"Ken Clark"** <ken@dieboldes.com>
- Date: Tue, 29 Jun 1999 15:06:17 -0500
- Importance: Normal

AVTS 3.6.1 is ready.

> AVTS-3-6-1.zip password "xazfyn9eg.01u".
> AVTSTemplate-3-6-1.zip password "ozkgapuvg4aek".

This release mostly fixes the problems Jeff was seeing with 3.5.2. Also, the upload procedure now has one less step: you will no longer will see a dialog to select the precincts to upload.

You need GEMS 1.10.4 or better (1.11.1) for this release.

Ken

3.6.1 Jun-29-99

- Requires GEMS 1.10.4.
- Fix bug uploading candidate totals (3.5.2).
- Eliminate precinct selection in when uploading results.
- Keep ballot results, challenge results and voter history files even if there are no results.
- Fixed election counter on the admin screen to check for the records under the result folder when starting election.

AVTS 3.6.1 InstallShield Package

- **To**: **"announce" <announce@dieboldes.com>**
- **Subject**: **AVTS 3.6.1 InstallShield Package**
- **From**: **"Whitman Lee" <whitman@dieboldes.com>**
- Date: Wed, 30 Jun 1999 16:18:49 -0700

Password is "gctnpnm/pcqjg". To people who has problem running AVTS on Win98, this package now includes the missing mfc42.dll (6.00.8267) file. These two files are included in the package and also available under ATFix directory:

vbajet32.dll
mfc42.dll.6.00.8267.0

Note you need GEMS 1.10.4 or better (1.11.1 password "uegnh.uailrqk") for this release.

AVTS 3.7.1

- **To**: <announce@dieboldes.com>
- **Subject**: **AVTS 3.7.1**
- **From**: **"Ken Clark"** <ken@dieboldes.com>
- Date: Tue, 6 Jul 1999 16:05:46 -0500
- Importance: Normal

AVTS 3.7.1 is ready and the passwords are:

AVTS-3-7-1.zip "kgjv4axlp2.6k"
AVTSTemplate-3-7-1.zip "gje/bo.jnm4ho"
AVTSIS-3-7-1.zip and AVTSIS-NOMDAC-3-7-1.zip "iobg/k4jwoy4s"

AVTSIS-3-7-1.zip is what you will now get if you order AVTSIS on an Imation disk from McKinney. It is a whopping 14MB, which is of course a royal pain to download. The NOMDAC version, as you can probably guess, does not include the MDAC stuff, so it will be a lot smaller. You need to have installed MDAC to use this version. You can download MDAC separately from the ftp site if you like.

3.7.1 includes support for recall races and closed primaries, and by popular demand restores the System Total. It does not yet fix the write-in upload problem reported earlier today. 3.7.1 should continue to work with GEMS 1.11.1.

The main reason for the release is so people can test out the new InstallShield.
Everyone responsible for the TS should do so. It should solve all the installation problems people have been seeing regardless of what OS release you are running (95, 98, or NT). MDAC 2.1 is not installed as part of the installation process if it is already installed on the machine. The intent is to have Windows 98 installed with MDAC at the factory at some point. For an explanation as to why we need to ship all of MDAC, refer to Microsoft's page on the subject.

Hats off to Whitman for putting this all together.

Ken

3.7.1 Jul-6-99

- Restore ProtCounter and System Total from the user interface. (3.5.2).
- Added support for GEMS style Recall Races.
- Added support for Closed Primary Elections.

- Next by Date: **GEMS 1.11.2**

GEMS 1.11.2 is ready and the password is "nn2ecvobmjpju".

Here is the readme since 1.10.4

1.11.2 Jul-7-99

- Fix bug uploading candidate counters (1.11.1).
- Fix bug in adding second endorsement or preference race (1.5.1?).
- Fixed spelling mistake in the pre-election report list.

1.11.1 Jun-29-99

- Added regenerate election id button to Election Setup.
- Fixed bug uploading on more than one port simultaneously (1.8.1)
- Added endorsement text width option, and wrap candidate label checkbox to Ballot Option.
- Changed the default Precinct Summary Report to not have Race Id checked.
- Fix bug in setting race to recalled (1.5.1).

For those of you that didn't get what I meant!.

Do not send any files created with Corel Draw, or Corel Word Perfect.

We use Photoshop, and MS Office here. Make the files compatible with these two suites of programs, and I will be able to make sense of the files you send.

GEMS-1-12-1.zip uegnh.uailrqk
TSText-1-12-1.zip gje/bo.jnm4ho

This is a prerelease of GEMS 1.12.1. Its intended only for testing with AVTS 3.10.1. Non-TS accounts should not be using this or any other 1.12 prelease, period. The readme file is not yet ready; we'll post a complete list of changes with the official release.

It is best if you make any time-consuming changes to your databases under GEMS 1.11.x and then upgrade to 1.12 for testing. Problems might be found with the upgrade routine, and a re-upgrade may be necessary before the official release. Bug reports for this GEMS release are welcome on the bugtrack list, but we are mostly interested in TS testing at this point.

TS 3.10.1 will be up shortly; we are still trying to squash a remaining bug that was discovered this morning.

AVTSIS-3-10-1.zip uzel1d5po6ujq
AVTS-3-10-1.zip iobg/k4jwoy4s

This release is for testing AccuVote TS accounts running this November. The official release will come once we are happy with the test results, and any bugs found are fixed. Everyone is encouraged to get involved with this testing. Please direct any bug reports to the bugtrack list. Work on the Poll Book is still in progress. Programming smart cards and reporting should work, but upload is not ready yet. We will also be improving the Poll Book user interface. The priority however is to get the Ballot Station stable in time for installation on early voting machines. We will turn our attention to the poll book once the Ballot Station is solid. Likewise, testing should concentrate on the Ballot Station first.

The TS administrative procedures have changed considerably with 3.10.1. In short, the TS should act a lot more like the AccuVote when it comes to administration. Send any comments on how the interface can be improved to the support list. We would really like some feedback in this area.

GEMS-1-12-2 and the new template AVTSTemplate-3-10-2 need to download to AVTS-3-10-2.

Here is the readme for AVTS-3-10-2 since 3.9.5

3.10.2

- Version information stored for all file types.
- Eliminiate ElectionName, ExportTo, and SecDir from registry.
- Hard disk label (serial number) no longer used.
- Download data stored on removable media (election.dld).
- Print floppy disk label after download. Disk contents label.txt stored on removable media.
- Removable media (floppy) used as primary storage. Results (.brs), audit (.adt), voter history (.hst) are updated on the removable media during election processing.
- Database (.mdb) and style (.sty) files no longer stored on the removable media (floppy).
- Store database and secondary data in ...\Ballot Station\ folder for Ballot Station and ...

\Poll Book\ for Poll Book.

- Removed challenge result file. All ballots are now stored in the .brs file.
- Administrative user interface changed to behave more like the AccuVote.
- Eliminate archive election and transfer archives.
- Precinct and Voter Group labels are displayed in the voter instruction screen.
- Support text scale factor controlled by GEMS AccuVote-TS setup.
- Support ballot headers and footers.
- Support @precinct header macro.
- Support race headers. Limitation of one header per race group.
- Support download of host phone number and server address.

The readme for GEMS-1-12-2 since 1-12-2

1.12.2

- Added artwork version option to Ballot Options.
- Fixed bug where checking on “print precinct on back” under Ballot Options while cards are printed gives error.
- Changed the ballot cast instruction rich text for write-ins.
- Fixed Vgroup Combo boxes in District editor.
- Added ExportID field to the District Editor, Race, Base Precinct, Header, Regions, Language, Vote center and Report Precinct Editor.
- All the ExportID fields added to the Export ID editor.
- Added refresh screen functionality.
- Fixed bug allowed to change Candidate Type field to Write-in when the election status is Card Printed.
- Added sorting of the entries in the PrintCards dialog

AVTS-3-10-4

- **To**: <announce@dieboldes.com>
- **Subject**: **AVTS-3-10-4**
- **From**: **"Dmitry Papushin"** <dmitry@dieboldes.com>
- Date: Fri, 1 Oct 1999 09:18:09 -0500

AVTS-3-10-4 is ready. The passwords are:

AVTSIS-3-10-4.zip ezfd0jhno2rx2
AVTS-3-10-4.zip cmbd8peftcarg

Fixed bugs and enhancements :

- Print AccuVote like label
- Change sort order of precincts in Poll book to be by label since cumulative precincts have
base precincts that contain no 'real' sorting information.
- Changed sorting of levels in poll book to use sequence rather than ID

- Importance: Normal

I had asked Dmitry to send this to Jane and Rodney for testing, but on reflection it is probably worth a general announcement.

This release uses the new GEMS v2 upload protocol. The Poll Book and Ballot Station now transfer ballot images as well as results. The ballot images are needed for write-in and challenge results, plus ballot auditing. You should also find that the time to build results on the TS has been improved. Please give me some feedback on this. The download protocol and ballot station files are compatible with previous 3-10 releases. It is only upload (transfer results) that has changed. In short, you don't have to upgrade the ballot station to take advantage of the new upload; just the poll book.

The GEMS Ballot Audit view is complete; there is a new menu item "Ballot Audit" for this. It displays paper ballots with filled ovals of the results from the AccuVote-TS. Upload and download have now been combined into one server according to protocol major version. Use the v1 server for 1.94 AccuVote upload/download, and use v2 server for the AccuVote-TS upload/download. TS upload should now behave much like the old AccuVote upload did. The list view now tracks those machines that have uploaded, and you need to reset the machine or election on the server before you can re-upload. The regional result server is no longer used for AccuVote-TS results.

Please give this a good run around the block and submit any bug reports. There are some rough edges with the AV servers, but it otherwise is looking pretty good so far.

Ken

Subject: AVTS-3-10-9, GEMS-1-13-1

AVTS-3-10-9 and GEMS-1-13-1 are ready:

AVTSIS-3-10-9.zip	cmbd8peftcarg
AVTSIS-NOMDAC-3-10-9.zip	ik12lkd2nqmpr
AVTS-3-10-9.zip	kpoen89w2aple
GEMS-1-13-1.zip	fagjqwglswr4u

Changes to AVTS:

- Handle failure of some files during upload.

Changes to GEMS:

- Fixed bug displaying all Vgroups in both the VGroup list boxes in the header editor.
- Post write-in counters.
- Post ballot box to database.
- Load TS vcenter/machine list and ballots into ballot image audit viewer.
- Display write-in lables on ballot audit viewer.
- Fix AV server crash when TCP ports are open.
- Record and play back voice.

- **To**: **"Announce" <announce@dieboldes.com>**
- **Subject**: **Re: Gems 1-13-5 - Reports**
- **From**: **"Michael Lai" <mk_lai@dieboldes.com>**
- Date: Wed, 27 Oct 1999 10:54:52 -0700
- References: <NCBBIGGNCKBDKCCGPEOAAEGHCPAA.ken@dieboldes.com>

I have put a new Gems-1-13-6-Reports.zip containing the AccuTouch Status
Report, TS Floppy Status Report, and reports.ini. The password is :

obhfg4typfnd3

Apparently, in Gems 1-13-5 - Reports, these two reports occupied only 6K of
space so it appears that the reports were not properly archived.

GEMS 1-13-9

- **To**: **"announce"** <**announce@dieboldes.com**>**,** <**tlglobal@earthlink.net**>
- **Subject**: **GEMS 1-13-9**
- **From**: **"Talbot Iredale"** <**tiredale@dieboldes.com**>
- Date: Fri, 29 Oct 1999 19:09:42 -0700

GEMS 1-13-9 is up on the ftp site. The password is jaojndej9d1se.

This fixes a problem with central count not counting votes introduced in the GEMS-1-13-8. It also fixes a problem with ChallengeBoardDlg that failed when non-challenged ballots where uploaded from the AccuTouch.

[Credit to Tracy and Susan]

‘Twas the day of the Christmas Party, when all through Global

Not a phone was ringing, not even a mobile;
The wreaths were hung on the front door with care,
Not knowing a Wind Storm soon would be there;

The employees were seated, all quiet in their spots,
Things were too calm…Our stomachs were in knots;
and Moe with his spreadsheets with Deby in tow,
Had just settled down to discuss the cash flow,

When out in the parking lot there arose such a clatter,
I sprang from my desk to see what was the matter.
Away to the window like a quick puff of smoke,
I ripped up my hose and knocked over my coke.

The sun on the lawn showed a lack of any snow
Which gave the luster of Summer to objects below,
When, what to my wondering eyes should arrive,
But a 300M. Now that’s a drive,

In the blink of an eye, he snapped back the seatbelt,
And I knew in a moment it must be Van Pelt.
More rapid than eagles his coursers they came,
And he whistled, and shouted, and called them by name;

“Now, Robert! now, Barry! now, Sherry and John!
On Diekman! on Kaplan! on Mickey and Don!
To the top of the heap to the top of it all
Outsell them, Outsell them, Outsell them all!”

And then, in a twinkling, he came up the steps
Swearing and screaming about each of the reps.
As I drew in my head, and was turning around,
In the front door Van Pelt came with a bound.

He was dressed like a prez’, from his head to his foot,
And his clothes were all pressed, no ashes or soot;
A bundle of contracts he had flung on his back,
And he looked like a peddler just opening his pack.

His eyes – how they twinkled! his dimples how merry!
He said I’ve got RFP’s…where the heck is Larry!
Orders for AccuVotes, Orders for Touch Screens,
Let’s get moving and build some machines.

We’ve got AccuPoke, AccuFake…Voting’s the theme,
And the visions encircle his head like a dream;
He had a smile on his face and whistled a tune,
As he thought about shipping 10,000 units by the end of June.

He was happy and cheerful, a right jolly ole Pelt
And I smiled when I saw him, in spite of myself;
A wink of his eye and a twist of his head,
Soon everyone was smiling, the joy was widespread;

He spoke not a word, but went straight to his work,
Picked up the phone and call the Cobb County Clerk,
He gave everyone a raise, like a good CEO,
And giving a nod, out the door he did go;

He sprang to his car, to his Team gave a whistle,
And away he did fly like the down of a thistle.
But I heard him exclaim, as he drove out of sight,
Happy Christmas to all and to all…Keep Smiling!

- Date: Thu, 23 Dec 1999 18:40:54 -0800

GEMS-1-14-2 is now up. the password is akidc903njwej

This fixes the rotation problem and the expanding of the reportunititems.

Also the artwork files now contain the party code for the card.

To All Global:

Please join me in welcoming Karen Adams to the McKinney staff. Karen is a professional technical writer with considerable experience in the development and creation of technical documentation.

Her task at Global, of course, is to review and assess our documentation needs and produce them for distribution. Her plan also involves carefully planned use of the Internet for presentation of certain materials.

In addition, Karen will serve as the coordinator of all RFP responses. Again her plan is to utilize myriad tools available to "dress up" the appearance of our response documents, and of course, to control and standardize the content wherever possible.

Karen joined our staff today and once she begins to get established, I'm sure she will be in contact with you to solicit your input.

Welcome aboard, Karen, we are excited to have you as part of the Global Team!!

I am sending this to everyone to give you a heads up on the Sprint cell phone network. After spending a good deal of time on the phone with a representative discussing cell coverage and sometimes lack thereof, it became evident that before I was going to make any progress, I needed to upgrade the software in my phone.

Coming from a software background, I should have known that the first level of support will tell me that no problem can be resolved until I have the latest version of software. (Sound familiar). Not only do I have to update my software but also my PRL (Phone Roaming List). Considering that I have not done this in 2 years I have approximately 20 towers somewhere within the Sprint network that my phone does not recognize.

I am sending this to everyone so that you too are aware that periodically you should update your Sprint PCS software & PRL's. I am told that it takes less than 10 minutes at any Sprint dealer.

I have heard many of the horror stories about coverage and messaging problems, and have encountered quite a few myself. I will be upgrading my phone to see if I can recognize any improvement. I encourage each of you to do the same. I plan to do this every quarter.

Larry J. Dix

Subject: One For The Books

I just have to share this! It has been a long day!

We use the Accu-Vote which as you know is a Mark Sense ballot system. I guess that means you have to have some sense to mark it. A voter signed the pledge, checked in, received his ballot, received ballot marking instructions and went to the voting booth to mark his ballot. After marking his ballot, he started to the tabulator and asked the election official if the tabulator would be able to read his ballot. The EO assured him it would. The voter held the ballot out and asked again. The EO did not want to see the ballot and assured him that it would. The voter mumbled that he did not know how it could that it was a mystery to him, he could not read it himself, and we must use some kind of magic ink. The EO official was far enough away that he could not really see the names so he glanced at the ballot and saw that it was not

marked. He told the voter he had to mark in the oval next to his choice. The voter said that he had. He was returned to the voting booth and both realized the voter had not removed the top from the marking pen!
Have what ever kind of day you want to!

Global will be sending out a notice to all of our direct customers. Dealers will be notified also. Dealers will be informed that they are responsible for notifying their direct customers.

If you are approached by an existing customer to order those memory cards, you can inform them that they are not available. Our order desk will do the same on direct orders placed to Global McKinney. On new contracts, only quote the 128KB memory cards.

Here is an FYI on a new virus floating around. Be aware!!!
Susan, perhap you should broadcast it to all Global people.
Thanks,
Larry

Attached is Global's news release which will be disseminated 10 minutes after the close of the market today (being 1:40 Vancouver time).

Susan, will you please advise Clint that you've received the finalized news release by e-mail.

Natasha, we made one small change to the second paragraph.

Best regards, Sharon

- **From**: **"Susan Martin" <susan@dieboldes.com>**
- Date: Tue, 3 Oct 2000 13:07:46 -0500
- Importance: High

Friday, October 6, 2000 at 3:00 pm CST, phone service in the McKinney office will be shut down for approximately 2 hours while the phone system is installed in the new building. Employees in the McKinney office who have cell phones should turn them on to receive calls during this time.

We have noticed several people having trouble opening the newsletter that
was sent earlier as an attachment.

The problem seems to stem from double clicking on the attachment from the
e-mail. If you do a "save as" on the attachment and then open it from Microsoft Word, it should work fine. Let me know if you have any problems.
Thanks.

Tracy

I'm a little disappointed that 2 very important people, Melissa Counts and,
Vicki Quisenberry's, names are not on the current employee roster. If it is
an oversight, can we please fix it.
Thanks,
Mike

Some time ago I raised the issue of having our results out six weeks after
the quarter. Ralph West assured me that in order to be complaint with SEC
rules which we are, the availability of the results was not an issue.
Unfortunately what I didn't realize was that it would take nearly another 60
days to press release the results. As a Global shareholder I was always
annoyed with the slow public reporting. We should be press releasing these
results no more that 5 days after the six week SEC filing. I agree with
Brown's position.

General:

Our mailing lists are managed my a program called **Majordomo**. You can get a list of commands that Majordomo supports by sending an email message with a single line "help" to majordomo@dieboldes.com. You can also send commands to a specific list by mailing to *list*-request@dieboldes.com where *list* is the name of the list. For example, you might send an "unsubscribe" command to support-request@dieboldes.com to unsubscribe from that list.

If have questions about using Majordomo or setting up your email, contact Mike Brown and he will be happy to help you out.

The lists are closed to Global staff. Do not CC customers when posting to the lists, or forward messages from the lists to customers without permission.

The Lists:

announce@dieboldes.com

The announce list is for general announcements. Submissions to announce should be of the "notice" variety -- much like a company bulletin board. The Global Newsletter and press releases are good examples. Messages sent to the announce list should **not** be followed up on the announce list. If you have a question, bug, or feature request, send them to the appropriate list, not announce. The exception to this would be the original submitter correcting errors in the announcement.

sw-announce@dieboldes.com

The sw-announce list is for announcements of new software releases. Submissions to sw-announce include a description of the changes in the software release, and the passwords to retrieve the release from our ftp site. Posting to the sw-announce list is restricted to the development group. If you have a support question, bug, or feature request related to a recent software announcement, send them to the appropriate list, not sw-announce.

rcr@dieboldes.com

The rcr list is for requests for new features or improvements to our products. Guidelines for posting messages to the rcr list are outlined in the document *Submission Policy* (attached).

bugtrack@dieboldes.com

The bugtrack list is for reporting bugs in our software products. Guidelines for posting messages to the bugtrack list are outlined in the document *Submission Policy* (attached).

support@dieboldes.com

The support list is for operations related discussion that is not otherwise bugs or feature requests. If you don't know if your question is a bug or rcr, post to support and ask. The issue can always be escalated to those lists later. All development and ESD personnel are welcome and expected to respond to this list if they know the answer or have something to contribute to the discussion. It is always better to send a question to the support list, even if you think it is simple or stupid. If you don't know the answer to the question, the chances are other people on the list don't know the answer either, and would also gain from seeing the response. Even if you know full well that there is only one person who knows the answer to your question, again post it to the support list, not him or her. Chances are very good that you are not the only one who needs to know the answer, or will need the answer three weeks from now. Consider the support list as a repository of communal knowledge.

salestalk@dieboldes.com

The salestalk list is for discussion regarding sales and selling-related topics. This includes questions about sales prospects, material for RFPs, status updates, and whatever else it is that sales people talk about.

Title: **Bugtrack Post Policy**

January 9, 2001

Bugtrack Submission Policy

The bugtrack list is used to report and track bugs in our software products. Bugs will not receive attention without a bugtrack submission.

Bugtrack submissions must contain:

- A subject line that contains a synopsis of the bug.
- The version of the software that contains the bug and the version in which the bug first appeared.
- A description of the bug, including all error messages.
- A test case and steps necessary to reproduce the bug.

A bugtrack submission must describe only one bug. It is possible for the same bug to manifest itself in more than one way, and this may result in more than one report, but single posts with unrelated bugs will be ignored. In particular, do not forward “bug lists” submitted by customers. Sort out and reproduce each bug, then post separate reports.

The subject line is critical. “GEMS 1.14.7.1 problem” is not an acceptable subject line for a bugtrack submission. The development group uses the subject line to track the status of the bug. We **will** lose your request without a proper subject line. If you have something to contribute to the discussion, be sure to do it using the same subject as the original submission.

If you did not catch the exact error message or were not actually present when the bug appeared, then reproduce the bug yourself and write down the details before posting. If you are not sure in which version the bug first appeared, narrow it down by testing earlier releases.

Development must be able to reproduce a bug in order to fix it. If you cannot reproduce the problem, it is very unlikely that development will be able to reproduce it either. Keep one or more toy databases you *know* worked in previous releases handy for testing. If a bug manifests itself in one database but not another, determine what settings trigger the problem by comparing the differences between the database that works and the one that doesn't. Start with the working database and then make changes until it breaks. Try to narrow your test case to a minimal database that exhibits the problem. Specifically, don't post a 2MB 1000-precinct VIBS database if a one-precinct one-race database also fails.

RCR Submission Policy

The RCR list is used request new features in our software products. Feature requests will not receive attention without a RCR submission.

RCR submissions must contain:

- A subject line that contains a synopsis of the request.
- The account requesting the feature, if applicable.
- The motivation for the request – why it is needed.
- A detailed description of the change or enhancement.
- The date the request is needed, and the nature of the deadline.

A RCR submission must describe only one new feature or enhancement. Minor related items can slide in of course, but unrelated features are verboten. In particular, do not forward "feature request lists" submitted by customers. Sort out the requests and submit them as

separate posts.

The subject line is critical. “New Report” is not an acceptable subject line for a RCR submission. The development group uses the subject line to track the status of the feature. We **will** lose your submission without a proper subject line. If you have something to contribute to the discussion, be sure to do it using the same subject as the original submission.

The description and motivation part of the RCR are important. The better job you do in describing how you would like the software to work, the better chance development has at satisfying your request. The submission must contain both the *why* and the *how* of the feature. That is, a RCR defines a *solution* to a problem, not just the problem itself. It is not enough to say that the software needs to be able to do so-and-so. You need to tell the developers *how* you want it to look and work. Think of an RCR as a mini-design document. Now, you don't have to get carried away: some requests are fairly self-evident, and the developers can work with you to get the fine strokes worked out. Just remember that if you don't know how the product would look after the problem is solved, the developers probably don't either.

Feature development is a dynamic collaborative process. If there are details of the new feature that are not obvious or there is more than one way to solve the problem, this will result in follow-ups to the original submission. If the missing details are not provided or there is no consensus on a preferred solution, this will stall the development process. Everyone is welcome to submit input on a request.

Update.

Our phone and fax lines are still down.

I am checking voice mail regularly and the best way to reach us is by
email.

At this point nobody can tell me if it is the outside lines or our
telephone
equipment.  I hope to have more information tomorrow.

Sorry.

New Staff-Only Web Site Launched

- **To**: **Announcements <announce@dieboldes.com>**
- **Subject**: **New Staff-Only Web Site Launched**
- **From**: **Guy Lancaster <glanca@dieboldes.com>**
- Date: Thu, 25 Jan 2001 17:08:20 -0800
- Organization: Global Election Systems Inc.

A new "Staff-only" site is now available at https://staff.dieboldes.com (The Staff Room). It can be used to disseminate all manner of information for internal use. Access is unrestricted from our internal networks (McKinney and Vancouver offices) and password controlled from the Internet. The password for external access will be distributed via the support@ mailing list and will be changed on the first weekend of each month.

Please have a look around. At this point the most useful items are the mailing list archives in the Lists section (https://staff.dieboldes.com/lists/). You can now browse and search the mailing list archives back to January of 1999.

I'll be adding material as it passes my way. If you have any ideas for the site please let me know.

Guy

WARNING: There's an email virus loose. DON'T OPEN "Here you have" MESSAGE ATTACHMENTS. Quitely delete them or others will be annoyed.

The virus attachment looks like an AnnaKournikova.jpg graphic but the giveaway is the .vbs suffix. Open it and it'll go through your address book sending copies of itself from you.

If you did open it, shut down your computer and then delete them

Title:

Service, Products and Sales Groups managers:

Please make sure that employees from your department who do not have email service or who do not subscribe to "announcements" get a copy of this email.

FYI: it is **important** that everyone who has email service subscribe to "announcements" because that is how general memos will be distributed. You may subscribe by sending Mike Brown a request (mike@dieboldes.com). Please take a minute to review the list below to make sure that all of the members of your department are on it.

Booth Telescoping Leg Animation

- **To**: **"Announcement \(E-mail\)" <announce@dieboldes.com>**
- **Subject**: **Booth Telescoping Leg Animation**
- **From**: **"Ian S. Piper" <ian@dieboldes.com>**
- Date: Fri, 16 Feb 2001 13:51:52 -0600
- Importance: Normal

An animation of the new telescoping leg design for the new CE unit Booth has been posted to the FTP site in the /pub/incoming directory. This animation does not include the new "sleek look" design.

The ZIP filename is Booth_leg_animation_Feb_16.zip.

The password for this ZIP file is qsp3b93nsd.

Sincerely,

Ian S. Piper
Manufacturing Director
Global Election Systems, Inc.

Can anyone who has been issued a wireless Network card for working in-house, please return them to me. I need to account for them. They were not to leave the office.
Thanks,
Mike

Staff Room Access for April 2001

- **To**: **Announcements <announce@dieboldes.com>**
- **Subject**: **Staff Room Access for April 2001**
- **From**: **Guy Lancaster <glanca@dieboldes.com>**
- Date: Thu, 29 Mar 2001 14:37:54 -0800
- Organization: Global Election Systems Inc.

Starting this weekend, to access the Staff Room (https://staff.dieboldes.com) from outside our firewalls you'll need to use:

Name: support
Password: crudfix49

The password will be changed on the first weekend of every month. Starting now the new password will be posted to the announcements mailing list. Previously it was posted to the support list but apparently some people that need remote access are not on the support list.

In case you missed it, the current password is:

Name: support
Password: ask4nothing (expires this weekend)

and yes, I failed to update it last month due to a new arrival at home. ;-)

Note that I normally post material unedited because there is very little time budgeted for site maintenance. Please feel free to edit (i.e. fix) something that is on the site and post me, mailto: webmaster@dieboldes.com, with the revision. I can do conversions to different formats. Eventually I plan to provide a way for others to post directly to the site but, until then, I'm the middleman.

Feedback is always welcome.

Guy

Staff Room Access for May 2001

- **To**: **Announcements <announce@dieboldes.com>**
- **Subject**: **Staff Room Access for May 2001**
- **From**: **Guy Lancaster <glanca@dieboldes.com>**
- Date: Fri, 04 May 2001 13:47:22 -0700
- Organization: Global Election Systems Inc.

This is the first weekend of May so, starting this weekend, to access the Staff Room (https://staff.dieboldes.com) from outside our firewalls you'll need to use:

Name: support
Password: rockbulb18

The password is changed on the first weekend of every month and posted to the announcements mailing list.

In case you missed it, the current password is:

Name: support
Password: crudfix49 (expires this weekend)

Note that I normally post material unedited because there is very little time budgeted for site maintenance. Please feel free to edit (i.e. fix) something that is on the site and post me, mailto:webmaster@dieboldes.com, with the revision. I can do conversions to different formats. Eventually I plan to provide a way for others to post directly to the site but, until then, I'm the middleman.

Feedback is always welcome.

Guy

Global Election Systems Inc. announced today that it has entered into a letter of intent to be acquired by Diebold, Incorporated based in Canton, Ohio

Last year Diebold's Brazilian subsidiary, ProComm, supplied the world's largest nationwide voting system, used by 109 million voters, during elections held throughout Brazil. Procomp provided the Brazilian government with a turnkey voting system, including more than 180,000 voting terminals, accessories, software, installation, training, logistics and support.

Diebold, a global leader in providing integrated self-service delivery systems and services, reported revenues of $1.7 billion in 2000. It employs more than 10,000 associates with representation in more that 80 countries worldwide. It is publicly traded on the New York Stock Exchange under the symbol `DBD.' For more information, visit the company's Web site at www.diebold.com.

With the signing of this letter of intent, I have assigned Mike Rasmussen and Larry Dix to head up the transition team through the transition process. Mike and Larry will be the liaison for all communications between Global Election Systems and Diebold. Please direct all inquires to either Mike or Larry.

Thank you for your dedication to Global and to the future with Diebold.

Everyone,

In case you haven't already heard, today is my last day at Global. As a matter of fact, this email should be the last thing I do at Global Election Systems. I've worked for Global for three years and nine months. It has been interesting stimulating work, and it has been brightened by getting to know and work with some of you. I've made a decision, based upon personal reasons, to go in another direction. But life is an adventure, and I do appreciate all of the great things I've gotten to do and the great places I've gotten to go because of working for Global. I carry it all with me as I head off into the future.

"And as we wind on down the road..."

Good luck, and Godspeed,

Tyler Lincks

Title:

To: Global Election Systems
From: Brian Clubb
RE: Resignation

5 October 2001

For the past three years I have worked for Spectrum then Global. Over that time I have become increasingly concerned about the apparent lack of concern over the practice of writing contracts to provide products and services which do not exist and then attempting to build these items on an unreasonable timetable with no written plan, little to no time for testing, and minimal resources. It also seems to be an accepted practice to exaggerate our progress and functionality to our customers and ourselves then make excuses at delivery time when these products and services do not meet expectations. The pressure to meet these deadlines and deal with repeated calls from sales staff and customers trying to ascertain actual progress versus exaggerated reports has become intolerable. The resulting stress has had a very negative effect on me both mentally and physically.

As internal politics and mismanagement continue to divert attention and resources away from these issues, the problems become further and further entrenched. Since the acquisition of Spectrum by Global, none of the personal or workplace benefits which the employees of Spectrum were promised have yet been realized.

This, in addition to the above issues, leads me to conclude that management is not concerned for the employees. Either they do not value the contributions of the employees, or are incapable of fulfilling these promises. Thus, seeing no end to this troubling situation, I find no other option but to end my employment with the company effective immediately.

Signed,
Brian Clubb

(Signed and submitted via fax to HR 10/5/2001)

It does not matter whether we get anything certified or not, if we can't even get the foundation of Global stable. This company is a mess! We should stop development on all new, and old products and concentrate on making them stable instead of showing vaporware. Selling a new account will only load more crap on an already over burdened entity.

Everyone is waiting for Diebold to come and save us. What do you think Diebold will say when they see what a mess everything is, or more to the point what Global has not shown them, or maybe it will not matter at that time, hmmm...

Every time I look at the support list there is another sales person or manager screaming we can't go forward without having to fix this or to fix that. You are taxing the development team beyond what they can handle. This is not there problem, it is yours.

Elections are not rocket science. Why is it so hard to get things right! I have never been at any other company that has been so miss managed. I see blame being put on anything that moves. Communication does not exist! All I here from upper management is “That’s fine, he or she will be removed”. Upper management seems to think they know what is going on. They are to caught up in to much politics, and to much self importance, to even realize that there are employees watching them, waiting for some direction... We have allot of bright people in Global, why is it so hard to get things right....

I just received a call from Ingrid, she says she is tired of getting calls from clients asking for help. No one at Global is giving them the time of day. Ingrid is the only name I will use in this conversation. I have had calls from other ex-employees stating the same thing.

We have a management team that is so redundant, it is pathetic, and yet we don't have enough employees to get the work done. Wake up! We keep loosing good people, and yet management does not see this, or more to the point, “just keep everything going, Diebold is coming and everything will be fine”. Bull!!

My views are my views only. If you wish to fire me for speaking the truth, bring it on... or fix this crap. The employees of this company are watching, waiting to see if you are the leaders that will keep them going, or the pathetic fools that will drive this company into the ground. I believe Global has great

products, great ideas, great people, just get things right and we will be the best.

Take care all.

Mike Brown.

Subject: Johnson County, KS - Battery Status & Charging

> Johnson County, KS has received 6 AVTS units for demonstration purposes. One of the units says Low for the Battery Status instead of Charging, this unit has been plugged in since they received it, over a week now. Does this mean that the battery is bad, or that the indication of the battery does not work???

Windows CE 2.12 has a bug where it always reports the Main Backup Battery as a "Low" Status. This is apparently corrected in Windows CE 3.0.

A PIC microcontroller is used to control battery charging/discharging and power distribution. The PIC monitors the battery and reports a percentage of the battery's charge capacity to WinCE, but at this time, the BallotStation software doesn't use the Battery Charge Capacity Percentage, only the status word (i.e., good, low, very low.) And WinCE 2.12 is stuck on "low". I don't know the outlook for implementing WinCE 3.0. Jeff Dean would be the person to make an inquiry to on that matter.

> They are in the planning stages of their warehouse, and would like to know what our recommendations are for charging of the AVTS units. Do the AVTS units need to be plugged in continously???

No, they don't need to be plugged in continuously. However, they can if they wish. It won't harm the unit.

> Can the AVTS units need to be charged on a rotation schedule???

If it is logistically more feasible for the warehouse staff to use a rotation schedule, then they can do that. The battery charging circuit only needs AC power attached to charge the battery. With the unit turned off and AC applied, the system will be in slow charge mode and will only draw a small amount of AC power (0.1A @ 110VAC). At that small of a current consumption, quite a few units can be attached to a single circuit.

NOTE: Sealed lead acid batteries lose approximately 3% of their charge per month just sitting on the shelf. If left unused, they should be recharged a minimum of once a year. Preferable

would be once every six months. Obviously, if they have more frequent elections cycles, and the units are charged before and after each cycle, this minimum wouldn't be a concern. But if they have spare units that are always held in reserve and never used, then they should meet the minimum charging requirements.

> Do the AVTS units need to be charged only 24 hours before an election???

On slow charge, a discharged battery will be charged in 12 hours. With AC applied and the unit is turned on and operational, the charging circuit switches into fast charge mode. This mode will bring a discharged battery to 85% of full charge within 3 hours. This is done by applying the manufacturer's maximum recommended charge current into the battery. The system will switch to slow charge after reaching the 85% point. Fast charging past that point can reduce the battery's life expectancy. The purpose behind the fast charge mode is to maximum charge time in a rolling blackout situation.

When the unit is using fast charge mode, it will consume more AC power (0.3A @ 110VAC).

NOTE: The ballot station operation takes priority over the charging of the battery. If the ballot station operation needs to draw power that nears the capacity of the power supply (e.g, someone plugs in an unapproved PCMCIA device that sucks the power down), then the battery charging circuit will either reduce to slow charge mode or stop charging in favor of the ballot station load requirements..

> I will be going down to Johnson County, KS on Tuesday for an all paper election, and they would like to know the answers to these questions.

Currently, an idle system will take 5-1/2 hours to discharge a fully charged battery. This is with the LCD panel displaying constantly. If the software is developed with a sleep mode for the LCD panel, this discharge time could be considerably longer. The LCD panel and its backlighting draw the most power.

The tested configuration for the 5-1/2 hour discharge time used a 32MB flash memory card as the only PCMCIA device. Other PCMCIA devices would draw additional power and therefore shorten the discharge time. Printing a paper tape on battery power draws considerable power, but that is cyclical and not a concern for overall discharge time. Unless, of course, it is done continuously.

On discharge, when the monitored battery voltage reaches 10.5V, the system will automatically shutdown. This is the 0% capacity point. Some components in the system require a minimum of 10.2V for operation and the life expectancy of a sealed lead acid battery will be reduced if it is used below 10.5V. Life expectancy on sealed lead acid batteries is 5 years.

I hope that answers your questions on battery charging (and discharging). Let me know if you need anything further.

Ian

Mike, rather than criticising you for speaking your mind, it is my hope that management realizes that your feelings reflect those of many other people. A wiser response is to listen and pay attention to the message, not to kill the messenger.

I see a valued employee who is a key to the success of this company going forward. We need people like you to help us through this next phase and make this transition a success. I see that your frustration level has reached the maximum. I sense the same frustration level among many employees in support and development. Your point regarding sales is valid, as are most of your points. I would counsel some patience while we see what happens here over the next month. It takes courage to speak your mind, and it's got to be done constructively to have an impact.

> It does not matter whether we get anything certified or not, if we can't even get the foundation of Global stable. This company is a mess! We should stop development on all new, and old products and concentrate on making them stable instead of showing vaporware. Selling a new account will only load more crap on an already over burdened entity.
>
> Everyone is waiting for Diebold to come and save us. What do you think Diebold will say when they see what a mess everything is, or more to the point what Global has not shown them, or maybe it will not matter at that time, hmmm...
>
> Every time I look at the support list there is another sales person or manager screaming we can't go forward without having to fix this or to fix that. You are taxing the development team beyond what they can handle. This is not there problem, it is yours.

Elections are not rocket science. Why is it so hard to get things right! I have never been at any other company that has been so miss managed. I see blame being put on anything that moves. Communication does not exist! All I here from upper management is “That’s fine, he or she will be removed”. Upper management seems to think they know what is going on. They are to caught up in to much politics, and to much self importance, to even realize that there are employees watching them, waiting for some direction... We have allot of bright people in Global, why is it so hard to get things right....

I just received a call from Ingrid, she says she is tired of getting calls from clients asking for help. No one at Global is giving them the time of day. Ingrid is the only name I will use in this conversation. I have had calls from other ex-employees stating the same thing.

We have a management team that is so redundant, it is pathetic, and yet we don't have enough employees to get the work done. Wake up! We keep loosing good people, and yet management does not see this, or more to the point, “just keep everything going, Diebold is coming and everything will be fine”. Bull!!

My views are my views only. If you wish to fire me for speaking the truth, bring it on... or fix this crap. The employees of this company are watching, waiting to see if you are the leaders that will keep them going, or the pathetic fools that will drive this company into the ground. I believe Global has great products, great ideas, great people, just get things right and we will be the best.

Take care all.

Mike Brown.

Subject: Johnson County, KS - Battery Status & Charging

> Johnson County, KS has received 6 AVTS units for demonstration purposes. One of the units says Low for the Battery Status instead of Charging, this unit has been plugged in since they received it, over a week now. Does this mean that the battery is bad, or that the indication of the battery does not work???

Windows CE 2.12 has a bug where it always reports the Main Backup Battery as a "Low" Status. This is apparently corrected in Windows CE 3.0.

A PIC microcontroller is used to control battery charging/discharging and power distribution. The PIC monitors the battery and reports a percentage of the battery's charge capacity to WinCE, but at this time, the BallotStation software doesn't use the Battery Charge Capacity Percentage, only the status word (i.e., good, low, very low.) And WinCE 2.12 is stuck on "low". I don't know the outlook for implementing WinCE 3.0. Jeff Dean would be the person to make an inquiry to on that matter.

> They are in the planning stages of their warehouse, and would like to know what our recommendations are for charging of the AVTS units. Do the AVTS units need to be plugged in continously???

No, they don't need to be plugged in continuously. However, they can if they wish. It won't harm the unit.

Can the AVTS units need to be charged on a rotation schedule???

If it is logistically more feasible for the warehouse staff to use a rotation schedule, then they can do that. The battery charging circuit only needs AC power attached to charge the battery. With the unit turned off and AC applied, the system will be in slow charge mode and will only draw a small amount of AC power (0.1A @ 110VAC). At that small of a current consumption, quite a few units can be attached to a single circuit.

NOTE: Sealed lead acid batteries lose approximately 3% of their charge per month just sitting on the shelf. If left unused, they should be recharged a minimum of once a year. Preferable would be once every six months. Obviously, if they have more frequent elections cycles, and the units are charged before and after each cycle, this minimum wouldn't be a concern. But if they have spare units that are always held in reserve and never used, then they should meet the minimum charging requirements.

Do the AVTS units need to be charged only 24 hours before an election???

On slow charge, a discharged battery will be charged in 12 hours. With AC applied and the unit is turned on and operational, the charging circuit switches into fast charge mode. This mode will bring a discharged battery to 85% of full charge within 3 hours. This is done by applying the manufacturer's maximum recommended charge current into the battery. The system will switch to slow charge after reaching the 85% point. Fast charging past that point can reduce the battery's life expectancy. The purpose behind the fast charge mode is to maximum charge time in a rolling blackout situation.

When the unit is using fast charge mode, it will consume more AC power (0.3A @ 110VAC).

NOTE: The ballot station operation takes priority over the charging of the battery. If the ballot station operation needs to draw power that nears the capacity of the power supply (e.g, someone plugs in an unapproved PCMCIA device that sucks the power down), then the battery charging circuit will either reduce to slow charge mode or stop charging in favor of the ballot station load requirements..

Ninety-five percent of the votes cast today by Global shareholders were in favor of Diebold's acquisition of Global.

More information about the transition to Deibold will be provided as it becomes available.

(Please pass this information along to your co-workers who do not have e-mail access.)

Subject: Florida Certification Update Report

The following memo, announcing certification of the Global Touch Screen Voting System was issued yesterday and is being mailed to all Supervisors of Elections in Florida.

Paul Craft

M E M O R A N D U M

TO: Supervisors of Elections

FROM: L. Clayton Roberts, Division Director

DATE: October 30, 2001

SUBJECT Voting System Certification

Certificate # 0110GLOBAL-02

The GEMS Voting System consisting of: GEMS Software, Release 1-17-17; one or more AccuVote Touch Screen (TS) R6 Version 4.0.11 (Windows CE) devices; one or more Accu-Vote Ballot ES 2000 Firmware Version 1.94-w and VLR firmware 13.9; and optionally one or more Accu-Feed Units, Revision D or E; has been certified by the State of Florida. Under this certification, all counties in Florida may purchase or use this system.

If you have any questions regarding this certification, please do not hesitate to call.

We are experiencing some difficulties with the server. You should be able to send emails, but may have difficulty receiving them or may receive them slowly.

You should be able to send and receive inter-company emails.

If you have a hotmail or other email address, you may want to use it for the next day or so.

Viruses--The True Story

- **To**: <announce@dieboldes.com>
- **Subject**: **Viruses--The True Story**
- **From**: **"Robert McDonald"** <rmcdonald@dieboldes.com>
- Date: Tue, 4 Dec 2001 20:57:46 -0600

Ok,

Here is a simple yet effective way to cleanse yourself of viruses. Don't open anything!!!!!!! Even if something is from a trusted source, you should examine it's filename and type before proceeding. 99.9% of all virus infections can be prevented by simple examination of the infected email. So please, on behalf of all support people, watch what you open.

Thanks,
Robert Mcdonald

MEMO

TO: Global Management

DATE: December 17th, 2001

SUBJECT: Resignation and 2 week notice

FROM: Mike Brown

This will confirm my resignation as a Support Specialist.

My experience with Global Election Systems has been very rewarding. I appreciate having had the opportunity to work with some really great people. I realize my leaving will have an effect on Global, and I apologize for this. I would like to thank the Management team in McKinney for helping me make this difficult decision.

Please feel free to contact me at any time should you have any questions regarding my past work. I hope that the transition will go smoothly for everyone.

I feel that over the next year, if the current management team stays in place, the Global working environment will continue to be a chaotic mess. Global management has and will be doing the best to keep their jobs at the expense of employees. Unrealistic goals will be placed on current employees, they will fail to achieve them. If Diebold wants to keep things the same for the time being, this will only compound an already dysfunctional company. Due to the lack of leadership, vision, and self-preserving nature of the current management, the future growth of this company will continue to stagnate until change comes.

- Date: Thu, 24 Jan 2002 12:42:28 -0600
- Importance: Normal

Please be advised that on January 31st, your payroll will be split between
two checks. The payroll thru January 21st will be paid from McKinney.
Payroll from January 22nd thru January 31st will be paid from Diebold. Both
of these payrolls will be paid on January 31st.

If your not confused yet, then hang in there. Please be sure to check your
first payroll from Diebold. The majority of employees will receive their
paycheck via direct deposit, but there are a few of our newest additions who
will be receiving an actual check the first time. Please take the time to
look.

On your first check from Diebold, there will be no deductions for insurance
premiums, 401K contributions, employee stock purchase, etc. On your second
check from Diebold, these premiums or contributions will be deducted twice.
After this time, the deductions will be taken out on each pay period.

Please be patient as wade through these transitional changes. If you

have
questions or concerns, please feel free to contact me, Liz Bowen, or Mike
Rasmussen.

I am pleased to announce that effective today, John Elder will be assuming
the role of General Manager of the Printed Products department of Diebold
Election Systems, Inc. John brings a wealth of knowledge along with a passion for success to this role which will be essential as we strive to
gain market share and improve profitability.

Jeff Dean has elected to maintain his affiliation with the company in a
consulting role, reporting to Pat Green. The Diebold Election Division
management team greatly values Jeff's contribution to this business and is
looking forward to his continued expertise in this market place.

Please join me in congratulating both John & Jeff in these responsibility
changes. Your assistance in making this transition efficient is greatly
appreciated.

Hello,

Your email addresses have been in a state of flux today. Much of the functionality appears to have been restored. The difficulty has been due to changing DNS records as our ISP recently made modifications to their upstream connection. This has propagated down and affected us.

Emails sent to the dieboldes.com domain are working right now, and we predict that email sent to the dieboldes.com domain should be working soon, hopefully within a day or two.

My apologies for the inconvenience.

Josh Gardner.

New "support" password for access to staff website

- **To**: <support@dieboldes.com>, <announce@dieboldes.com>
- **Subject**: **New "support" password for access to staff website**
- **From**: **"Josh Gardner"** <josh@dieboldes.com>
- Date: Thu, 16 May 2002 11:46:03 -0700
- Importance: High

Hi everyone,

Effective immediately, I have changed the "support" password for the staff website. The new password is z00land52

I've made the change in an attempt to preserve at least a passable degree of security. However, this is in all likelihood the last time the "support" password will be changed, before being deactivated, in favour of controlling access to the staff site on a per-user basis.

Questions or concerns, please contact me.

New "support" password for access to staff website

- **To**: <support@gesn.com>, <announce@gesn.com>
- **Subject**: **New "support" password for access to staff website**
- **From**: **"Josh Gardner"** <josh@gesn.com>
- Date: Thu, 16 May 2002 11:46:03 -0700
- Importance: High

Hi everyone,

Effective immediately, I have changed the "support" password for the staff website. The new password is z00land52

I've made the change in an attempt to preserve at least a passable degree of security. However, this is in all likelihood the last time the "support" password will be changed, before being deactivated, in favour of controlling access to the staff site on a per-user basis.

Questions or concerns, please contact me.

Josh Gardner

As I am sure most of you are already aware, Robert Stokes' son, Bobby, passed away on May 11th. Robert has forwarded the attached information with
regards to arrangements that have been made.

In honor of our friendship and support of Robert and his family, we will be
accepting donations today to be given to Heart House in Dallas, a children's
advocacy charity that was near to Bobby's heart. Anyone in the McKinney
office wishing to donate can bring it to Tracy Flagg. You may also make a
donation to Heart House, 5443 Ellsworth Avenue, Dallas, TX 75206 or visiting www.hearthouse.org.

Thank you.

The “support” user name and password used to access our staff site has been shut down. Each DESI associate has been sent an email with their new personal user name and password. You are encouraged to change this password after you first log in, using the edit password page. If you did not receive your password or have problems logging in, please contact Josh Gardner.

Note that this new staff site password is not related to your email or other passwords. It is only for use with the staff site. All other passwords you may be using remain unchanged.

Ken

Greg Loe has accepted the position of Controller for Diebold Election Systems. In his role, he is responsible for the accounting, budgeting, business insurance, scheduling, and order entry functions. Greg comes to Diebold with years of experience in various roles including past controller positions.

Greg has been in this role on a contract basis since June 1 and has now agreed to take the position. Liz Bowen and Robert Stokes report directly to Greg.

Please join me in welcoming Greg to DESI.

If you have questions of Greg, please do not hesitate to call him.

Johnson County's computer voting machines withstand primary

By FINN BULLERS
The Kansas City Star

The count took longer than expected, and hundreds of votes were overlooked for a time, but Johnson County's top election official on Wednesday called the county's first full-fledged use of computer voting machines a success.

Despite some human glitches, the machines withstood the pressure of a primary election across 403 precincts, Election Commissioner Connie Schmidt said after an anxious 13-hour election shift.

"The machines performed very well," Schmidt said. "We were very pleased. The software proved itself to me."

But you might have gotten a less-rosy response at 9:30 p.m. election night.

That is when workers at command central in Olathe realized that just under 500 votes recorded on six of 820 election cartridges were missing. Poll workers accidentally left the cartridges, the size of a compact disc, in polling computers that were locked away for the night.

"They basically got in a hurry and left too soon," Schmidt said.

Election foul-ups surfaced at the following locations:

• Mission Road Bible Church, 7820 Mission Road, Prairie Village.

• Overland Park Lutheran Church, 7810 W. 79th St., Overland Park.

• Redeemer Lutheran Church, 7300 Nieman Road, Shawnee.

• Rising Star Elementary School, 8600 Candlelight Lane, Lenexa.

• South Park Elementary School, 8715 W. 49th Terrace, Merriam.

The uncounted ballots were cast in races in Kansas House Districts 21, 22, 23 and 30, all uncontested races except for District 30, Schmidt said.

In District 30, David Huff, a Lenexa Republican, captured a decisive victory.

Schmidt made the decision Tuesday night to wait to add the votes from the uncounted cartridges to the totals. That will be done when the County Commission convenes at 2 p.m. Monday to certify the election results. The session at the Johnson County Election Office, 2101 E. Kansas City Road in Olathe, is open to the public.

In all, 96,002 votes were cast out of a potential 328,757 registered voters, a strong 29 percent turnout.

Election systems similar to the one used in Johnson County will be deployed this fall in Georgia; Alameda County, Calif.; and El Paso County, Texas.

Representatives from all three locations observed Tuesday night's election, along with a representative of Diebold Election Systems Inc., the McKinney, Texas, company that supplied the $3 million in hardware and software.

"I took my time last night because it was very, very, very important to me to know that the software was tabulating correctly," Schmidt said. "We owe it to the county and the taxpayers and everyone else to be sure that it's right."

When the machines were first used in April during city elections, incorrect vote totals were discovered in six races, three of them contested.

Schmidt defended the voting machines at the time, saying they worked fine. She blamed the mistakes on the software used to tally the votes.

For Tuesday's results, Schmidt devised a parallel computer tally system that delayed election results by up to 45 minutes. That double-check will not be used in November, she said.

"We knew we were going to be slower," Schmidt said. She said that the larger number of candidates on the ballot in a primary, as opposed to a general election, slows down the count.

The election commissioner insists the county's foray into electronic balloting should not be dubbed an experiment.

"No, we never signed on to be guinea pigs," Schmidt said. "Our voters love the new machines."

The Nightmare Scenario Is Here - Computer Voting With No Paper Trail

Monday, August 5, 2002

CommonDreams.org

by Lynn Landes

Dr. Rebecca Mercuri has a dream....and political candidates and their supporters had better listen up unless they want to see all their hard work go down the tube because of voting machine failure or finagling.

Mercuri is a computer science professor at Bryn Mawr College in Pennsylvania, president of the consulting firm Notable Software, and one of the nation's foremost experts in the field of voting machine technology and security. Her testimony has been used in legal battles involving voting system failures, including the Bush-Gore election.

For the last 10 years she's dreamed of the day when voting machines can be relied upon to register and count every vote correctly; where man and machine, paper and process, come together to

guarantee an almost fail-safe voting system. She's even given her dream a name, "The Mercuri Method for Voter-Verified Physical Ballots."Yes, she's a bit of a nerd and proud of it.

But instead of seeing her dream come true, Mercuri is living her worst nightmare. Scores of county election boards across the nation have rushed out and bought the latest high tech 'paperless' voting machines. And leading the herd off the cliff is Theresa LePore. That's right, the Queen of Chad, Supervisor of Elections in Palm Beach County, Florida, who some say single handedly cost Al Gore the presidency, is back with another debacle. Her office is being sued by the former Republican mayor of Boca Raton, Emil Danciu, who claims that the city council election held last March should be re-run due to malfunctions in the new $14 million dollar computer voting machines LePore bought from Sequoia Voting Systems Inc..

Sound familiar? But wait. There's a new twist to this old tale. LePore is once again, and almost perversely, providing a much-needed service by demonstrating how bungled the job of electronic voting can get. The machines LePore purchased can't be audited through a paper trail. There are no ballots. Making matters worse, LePore signed an agreement with Sequoia to protect their "trade secrets," which effectively prohibits any party contesting an election from examining the machine or its programming. That's convenient for Sequoia and the winner, but alarming for critics who believe the voting process should not be based on a Titanic leap of faith.

Mercuri says that in order for an electronic voting system to have any integrity, five components must be present - a voter, a ballot, a computerized voting machine, a printer, and an optical scanner - and three basic steps must be taken. First, the voting machine registers a voter's selection both electronically and on a paper ballot. Second, the machine then displays the paper ballot behind clear glass or plastic so that the voter can review their selection, but not take the ballot home by mistake. If the voter's selection doesn't agree with the ballot or the voter makes a mistake, the voter can call a poll worker to void the ballot, and then re-vote. And third, the paper ballot is optically scanned (most likely at the county administration building), providing a second electronic tally. If anything goes wrong with either the voting machines or the optical scanner, the paper ballots can be hand-counted as a last resort or as part of an audit. And voila! We have a fully auditable voting system with checks and balances, review and redundancy.

This is an extremely important issue. Due to difficulties using voting equipment, 1.5 million presidential votes were not recorded in 2000, and up to 3.5 million votes weren't recorded in the last election cycle for the Senate and state governors, according to The CalTech/MIT Technology Report of July 2001.

The chief problem with paperless computer voting, according to Mercuri, is this, "Any programmer can write code that displays one thing on a screen, records something else, and prints yet another result. There is no known way to ensure that this is not happening inside of a voting system." And Mercuri points out, "No electronic voting system has been certified to even the lowest level of the U.S. government or international computer security standards..." The Federal Election Commission provides only voluntary standards, and even those don't ensure election "integrity," she says.

As for Internet voting...forget about it. "A secure Internet voting system is theoretically possible, but it would be the first secure networked application ever created in the history of computers," says Bruce Schneier, founder of Counterpane Internet Security, Inc.

This summer Congress has been working on H.R. 2275, which provides for the establishment of an election standards commission. Election standards would still be voluntary, but Mercuri believes that the technical standards, if developed by the National Institute of Standards and Technology, will be effective. Unfortunately, the bill got tabled until the fall.

It's not too late to fix the problem for those counties that have already bought paperless computer voting machines, like my hometown of Philadelphia. Election officials can simply attach a printer to the computer and then feed the results into an optical scanner. A printer should cost about $20-50. Optical scanners that are hand-fed can cost $3,000 – 4,000 and scan 2,000 - 3000 ballots per hour. For populated counties automated units can cost $40,000 - $50,000 and scan 20,000 ballots per hour.

As it stands, the integrity of the voting process in the United States has already been damaged. Without a paper ballot and absent a voter's ability to check their selection, computer voting is an invitation to across the board malfunction and malfeasance. With the legitimacy of our representative democracy at stake, it's time to make Dr. Mercuri's dream come true.

Voters are getting the feel of new election equipment

By Kathy Bushouse

South Florida Sun-Sentinel

August 13 2002

For a person who doesn't know computers, the black voting machines with the oversized screens can look a bit intimidating at first.

But after a few minutes on Monday afternoon, Kitty Zimmerman, 92, was casting votes on the county's new touch-screen machine as if she'd done it a thousand times.

"I thought it was going to be so difficult because I don't understand computers," said Zimmerman, who lives west of Delray Beach. "I found it very easy, very simple."

Zimmerman was one of more than 80 people at the Heritage Park retirement community west of Delray Beach who tried out the new machines at a demonstration led by county Elections Supervisor Theresa LePore.

With four weeks to go until the Sept. 10 primary, LePore's workers aren't letting up in their effort to educate voters on how to use the county's new $14 million voting system. Demonstrations are scheduled for every week, seven days a week, until Election Day, Nov. 5.

She said many voters are nervous at first when they see the machines but are much more comfortable once they've tried it.

"If you know how to play video poker, you can use this machine," LePore told the crowd.

The county purchased the machines after the state Legislature outlawed the old punch-card machines, which received much of the blame for problems in the 2000 presidential election.

The touch-screen machines, first used in the county's spring municipal elections, have had a number of cheerleaders and critics. While many praised the machines' ease of use during their trial run, others have questioned whether the elections office has fully worked out potential problems.

But there were no complaints Monday.

Gerald Gross, who had trouble voting in the November 2000 election, said he's not nervous about voting again. After trying the new machines, he was quite happy.

"This is wonderful," said Gross, 74. "There's barely a way to make a mistake."

In addition to ensuring that voters know how to work the machines, LePore's election preparations have hit a familiar snag -- finding poll workers for the upcoming election.

Palm Beach County is about 1,200 poll workers short of the 5,000 people needed. LePore has launched an extensive publicity campaign to find more help.

As in most counties, LePore has no problem finding workers in retirement communities such as Century Village west of Boca Raton.

"It is in areas where working people live that we are having a problem," she said. "We have long waiting lists [for poll workers] in all of our retirement communities, and none of them will drive."

Areas where there is a critical need for poll workers include northern and western Palm Beach County, LePore said.

Poll worker volunteers must have two hours of orientation, then go to additional training classes. Poll workers make a minimum of $105 for a day's work. Precinct leaders make slightly more.

Broward County's predicament is worse: 3,000 poll workers and 110 locations for polls are needed.

Broward officials blamed the poll worker shortage on many elections veterans quitting rather than learning new electronic machines, and the shortage of polls on growth that has outstripped the number of buildings that can set aside a large area on Election Day for voting.

Many Florida counties also have been trying to fill openings in their new executive loan programs, where businesses and other private groups are being encouraged to lend employees to work at the polls. They would be in addition to the poll workers, helping to resolve problems and assist voters with problems.

Anyone interested in being a poll worker for Palm Beach County should call the elections office at 561-656-6200.

eDemocracy in a Changing World

12 August 2002

eGov monitor Weekly

(c) KAM Ltd 2002

By Thomas B Riley

Executive Director and Chair

Commonwealth Centre for Electronic Governance

The application of eGovernment is beginning to change, in some small ways, the traditional hierarchal forms of government. To deliver public services electronically, new types of interactions are often needed between departments or agencies, which are in turn changing the internal dynamics of government. The rise of electronic democracy - or eDemocracy - is part of this e-evolution which is also altering the relationship between government and citizen. Much has been said and written about this phenomenon but the question remains: will eDemocracy change the nature of citizen interaction with government and, more importantly, the political process? And, if so, how dramatic will this shift be?

eGovernment is rapidly developing in many countries, especially in the developed world. The UK is taking the lead in developing strategies for eParticipation and eVoting, as evidenced in the Government's recent consultation paper, In the Service of Democracy. While this paper represents an important first step, it is actually just the beginning of the wide potential of eDemocracy.

eDemocracy in the Future: Will We See Significant Change?

The OECD Public Administration (PUMA) Group, that is conducting extensive studies on eGovernment and eDemocracy, has articulated the three main components needed for online dealings between government and the citizen. These are: Information, participation and consultation.

Many governments are pledging to move in this direction but progress towards results has been slow. The precepts are easy to articulate but attaining desired

results is proving to be more difficult to achieve. Part of this can be explained through the hierarchal nature of organisations and the current role of representative government in democratic societies. External groups and individuals, on an international scale, are working to change this dynamic. But governments are moving at a slower and different pace than groups and citizens who are using the Internet to influence the evolution of government programmes, policy and legislative implementations.

Historically, the relationship between government and citizen has been a top-down affair with those in elected authority controlling the agenda. The advent of interactive technologies has seen the nature of the citizen begin to take on a new shape and form.

The potential of eGovernment to empower the citizen has been the subject of much discussion. New Information and Communication Technologies (ICTs) offer access to worldwide information, increased capacity to communicate and interact online, as well as a host of other rich experiences to individuals with the means to access them. Governments around the world have developed many programmes to cross the digital divides that exist in their own countries and stimulate their economies through grants, investment and other mechanisms. But as to empowerment of the citizen having an impact on government or the political process, there is still a long way to go before the dream and ideal of eDemocracy is reached.

Tools are being developed for online consultations between the government, citizen, action groups and business. But the results are limited. There is much discussion and interaction between groups and citizens and, to a certain extent, between government and the citizenry. However eDemocracy is evolving within society more on the level of group to group and peer-to-peer interactions with participants using ICTs to enhance and better their lives. The latter is a form of eDemocracy that has minimal influence from government, except to the degree that people might use online or offline government information to further their work. Community and online groups work well when these people are driven by individual interest, no matter what the cause.

eDemocracy, in relation to government and how we are governed, if and when it takes hold as a mass movement will have to be driven by a large section of the population who firstly, want to participate actively in government at some level and secondly, are willing to see a new form of democracy evolve.

The change will depend on the degree to which people want to be more engaged in government and on the emergence of new political thinkers who will think through to the next evolution of democracy.

ICTs are putting a certain amount of power, albeit a small one to date, in the hands of the citizen at large. eDemocracy is alive and vibrant, through citizens and interest groups, in many jurisdictions around the world, but in terms of government budgets, funding allocated to democracy programmes has been limited compared to the billions spent on eGovernment. National administrations and large corporations control the current eDemocracy proposals on a local, state/provincial, national and international scale. The latter is promoting particular technologies, especially for online voting, but also evolving technologies that will better serve the needs of the citizens coming to government web sites.

Through the new technologies being developed, a non-linear world of time and distance is merging in people's minds, and the world is being seen in new dimensions not known before in our history. It is this potential that will drive the change in our society. It is not necessarily because there is a younger generation coming up who are integrated with the technology and have adapted it with ease. Rather, it is the potential of what these technologies can do that holds within the minds of so many the kernel of change. We have only began to realize the true dimension and scale of where democracy might go.

Thomas Riley is the the co-Founder, Chair of the Board and Chief Executive of the Commonwealth Centre for Electronic Governance [http://www.electronicgov.net], a think-tank set up under a Commonwealth Secretariat programme in London. He is also the President of Riley Information Services [http://www.rileyis.

com], a consultant and advisor specialising in national and international IT policy development, and a Visiting Professor of Law and Technology at the University of Glasgow. Throughout his twenty-eight years as an access, privacy and information technology professional, Mr Riley has written numerous articles and opinion pieces published around the world, organises national and international conferences on a wide range of information technology and policy issues, and produces specialised reports for public and private sector clients. "Urgent" e-voting security consultation launched

eGov monitor Weekly

(c) KAM Ltd 2002

The Office of the e-Envoy (OeE) has launched an urgent consultation on a new set of security concepts that will form the baseline for all future pilots and full-scale implementations of electronic voting in the UK.

Industry input is being sought on recommendations put forward by the

Communications Electronics Security Group (CESG), the Government's national technical authority for information assurance, following a high-level review of e-voting systems and procedures that could be put in place to minimize the risks associated with their use.

The OeE is seeking the views of IT suppliers to inform the second phase of electoral modernization pilots, set to be announced in less than five weeks' time. The Office of Deputy Prime Minister will next month issue a prospectus to councils inviting them to participate in trials of e-voting in the May 2003 local government elections, and also publish an invitation to tender for potential suppliers. Early comments have, therefore, been invited relating to the practical arrangements of implementing pilot systems that reflect the CESG's analysis and recommendations. The deadline for responses has been set as 28 August, leaving interested parties - such as suppliers of infrastructure or services which are, or may become, relevant to e-voting election officials - with only two weeks to submit their comments. Responses will also feed into the Government's over-arching strategy for eDemocracy policy, which is subject to consultation until 31 October.

The move follows recent criticisms by the Electoral Commission of the "less than efficient" procurement process undertaken in last year's pilots, that resulted in what they reported as "timetable pressures" that in many cases, required councils and their IT partners to start developing their e-voting systems before receiving the official go-ahead.

The most significant of the 15 recommendations made by the CESG in their study is the adoption of a "key principle" which will be fundamental in the development of any successful, and secure, remote electronic voting system. The principle outlines the requirement for a trusted path between the voter's intention and what is recorded in the system - fulfilling the traditional role of the pencil, paper and ballot box. The CESG conclude that current security technologies are unable to meet the requirements implied by this key principle, and outline a technical approach using pre-encrypted ballots that could allow e-voting to be implemented for very large-scale surveys and elections.

The Nightmare Scenario Is Here - Computer Voting With No Paper Trail

Monday, August 5, 2002

CommonDreams.org

by Lynn Landes

Dr. Rebecca Mercuri has a dream....and political candidates and their supporters had better listen up unless they want to see all their hard work go down the tube because of voting machine failure or finagling.

Mercuri is a computer science professor at Bryn Mawr College in Pennsylvania, president of the consulting firm Notable Software, and one of the nation's foremost experts in the field of voting machine technology and security. Her testimony has been used in legal battles involving voting system failures, including the Bush-Gore election.

For the last 10 years she's dreamed of the day when voting machines can be relied upon to register and count every vote correctly; where man and machine, paper and process, come together to guarantee an almost fail-safe voting system. She's even given her dream a name, "The Mercuri Method for Voter-Verified Physical Ballots."Yes, she's a bit of a nerd and proud of it.

But instead of seeing her dream come true, Mercuri is living her worst nightmare. Scores of county election boards across the nation have rushed out and bought the latest high tech 'paperless' voting machines. And leading the herd off the cliff is Theresa LePore. That's right, the Queen of Chad, Supervisor of Elections in Palm Beach County, Florida, who some say single handedly cost Al Gore the presidency, is back with another debacle. Her office is being sued by the former Republican mayor of Boca Raton, Emil Danciu, who claims that the city council election held last March should be re-run due to malfunctions in the new $14 million dollar computer voting machines LePore bought from Sequoia Voting Systems Inc..

Sound familiar? But wait. There's a new twist to this old tale. LePore is once again, and almost perversely, providing a much-needed service by demonstrating how bungled the job of electronic voting can get. The machines LePore purchased can't be audited through a paper trail. There are no ballots. Making matters worse, LePore signed an agreement with Sequoia to protect their "trade secrets," which effectively prohibits any party contesting an election from examining the machine or its programming. That's convenient for Sequoia and the winner, but alarming for critics who believe the voting process should not be based on a Titanic leap of faith.

Mercuri says that in order for an electronic voting system to have any integrity, five components must be present - a voter, a ballot, a computerized voting machine, a printer, and an optical scanner - and three basic steps must be taken. First, the voting machine registers a voter's selection both electronically and on a paper ballot. Second, the machine then displays the paper ballot behind clear glass or plastic so that the voter can review their selection, but not take the ballot home by mistake. If the voter's selection doesn't agree with the ballot or the voter makes a mistake, the voter can call a poll worker to void the ballot, and then re-vote. And third, the paper ballot is optically scanned (most likely at the county administration building), providing a second electronic tally. If anything goes wrong with either the voting machines or the optical scanner, the paper ballots can be hand-counted as a last resort or as part of an audit. And voila! We have a fully auditable voting system with checks and balances, review and redundancy.

This is an extremely important issue. Due to difficulties using voting equipment,

1.5 million presidential votes were not recorded in 2000, and up to 3.5 million votes weren't recorded in the last election cycle for the Senate and state governors, according to The CalTech/MIT Technology Report of July 2001.

The chief problem with paperless computer voting, according to Mercuri, is this, "Any programmer can write code that displays one thing on a screen, records something else, and prints yet another result. There is no known way to ensure that this is not happening inside of a voting system." And Mercuri points out, "No electronic voting system has been certified to even the lowest level of the U.S. government or international computer security standards..." The Federal Election Commission provides only voluntary standards, and even those don't ensure election "integrity," she says.

As for Internet voting...forget about it. "A secure Internet voting system is theoretically possible, but it would be the first secure networked application ever created in the history of computers," says Bruce Schneier, founder of Counterpane Internet Security, Inc.

This summer Congress has been working on H.R. 2275, which provides for the establishment of an election standards commission. Election standards would still be voluntary, but Mercuri believes that the technical standards, if developed by the National Institute of Standards and Technology, will be effective. Unfortunately, the bill got tabled until the fall.

It's not too late to fix the problem for those counties that have already bought paperless computer voting machines, like my hometown of Philadelphia. Election officials can simply attach a printer to the computer and then feed the results into an optical scanner. A printer should cost about $20-50. Optical scanners that are hand-fed can cost $3,000 – 4,000 and scan 2,000 - 3000 ballots per hour. For populated counties automated units can cost $40,000 - $50,000 and scan 20,000 ballots per hour.

As it stands, the integrity of the voting process in the United States has already been damaged. Without a paper ballot and absent a voter's ability to check their selection, computer voting is an invitation to across the board malfunction and malfeasance. With the legitimacy of our representative democracy at stake, it's time to make Dr. Mercuri's dream come true.

Jeffco voters point fingers

But with new touch screens, they were supposed to

By Charley Able

Rocky Mountain News

August 14, 2002

Colorado -- Jefferson County voters entered the computer age Tuesday, using touch-screen voting for the first time in a major election.

Last spring, county commissioners agreed to spend about $6.5 million for 1,840 iVotronic units, providing one machine for every 250 active, registered voters. The machines were used in all of the county's precincts.

Faye Griffin, county clerk and recorder, said the new system was working well.

"It's going real well, almost too scary," Griffin said as the vote-counting progressed Tuesday. By 9:45 p.m., the county had posted vote totals for more than 89 percent of precincts.

"It is counting about 20 precincts in two minutes. It's not a large turnout, but it is a turnout," she said. "The only flaws we have had are some misunderstandings with election judges in opening and closing."

For years, Jefferson County's final voting results have lagged behind those of other counties by hours because of outdated punch-card voting. In the 1999 general election, the punch-card votes were not tallied until after 1 a.m.

In the November 2001 election, the county used a rented "connect the arrows" paper-ballot system that provided faster, more accurate results.

But when the time came to purchase a system, Griffin opted for the touch-screen system that was enlisted for Tuesday's primaries.

The new system records votes on three independent and redundant storage devices, providing backup to prevent loss or alterations of votes.

It is also capable of transmitting results from outlying locations, a feature that allowed polling-place results to be funneled to Griffin's office from the motor-vehicle branches throughout the county.

The motor-vehicle branches were chosen, in part, because they have phone lines capable of high-speed data transmission.

Florida ready to move past chad of 2000 election

08/13/2002

By Deborah Sharp

USA TODAY

DELRAY BEACH, Fla — The "butterfly ballot" threw him for a loop two years ago, but Edward Japalucci needed only moments to master the new touch-screen machine that many Florida voters will use in next month's primary.

It will take a lot longer for his hard feelings to fade over the 2000 presidential election, when voting mishaps made his county a national punch line and led ultimately to statewide voting changes.

"It wasn't very funny," says Japalucci, 73. "If you're a Democrat, it wasn't very funny at all."

On Sept. 10, the Florida primary will mark the first statewide election since the voting debacle of November 2000. Florida has made broad changes since then. The 30-year-old punch-card technology that was used is now banned. Voter education has increased. And recount rules are standardized.

Election supervisors have been busy demonstrating the touch-screen voting machines at malls, senior centers and small civic gatherings. The screens resemble bank ATMs.

At the Elks lodge here, Japalucci and 26 others turned out recently for a demonstration by Palm Beach County Elections Supervisor Theresa LePore. There were only a few glitches.

"It's a computer. I know that scares a lot of people, especially older people," LePore says. She compared it to other touch-screens, from microwaves to video poker. "Don't be afraid of it."

But with the old punch-card technology, Florida put the outcome of the presidential election on hold through 36 days of recounts, court battles and protests. The U.S. Supreme Court finally settled the stalemate. Of 5.8 million ballots cast in Florida for the Republican and Democrat candidates, George W. Bush beat Al Gore by an official margin of 537 votes.

Florida bore the brunt of national scrutiny of voting methods. But the narrow outcome revealed voting system flaws nationwide. Some 101 million Americans voted in the presidential election.

Researchers from the California Institute of Technology and the Massachusetts

Institute of Technology studied the nation's voting technology after the 2000 election. They concluded that between 4 million and 6 million Americans were unable to vote, or their votes were uncounted:

* At least 1.5 million presidential votes were lost due to faulty equipment or confusing ballot design.

* Registration mix-ups accounted for 1.5 million to 3 million lost votes.

* Polling place foul-ups led to 1 million lost votes.

Most Americans were surprised to discover vast numbers of votes are routinely uncounted in a system hobbled by everything from voter error to flawed technology. If victory margins are wide, the spoiled votes rarely become an issue. But in a close race, the shortcomings are revealed.

Which is why a nation learned, through the Florida recounts, about the once-obscure chad. Chad — not "chads" — are tiny bits of paper that result after a voter makes selections on a punch-card ballot. Sometimes the chad does not fully separate from the ballot, those are called hanging, pregnant or dimpled chads.

Nearly every state filed election reform measures after Florida's fiasco: a staggering 3,561 bills. By early July, only 440 provisions had passed, according to the National Conference of State Legislatures.

A handful of states, besides Florida, made major changes, including Georgia, Maryland and California.

"Obviously, some momentum has been lost. Congress hasn't produced a bill in almost two years. It's an absolute outrage," says Doug Lewis, of the non-profit Election Center. The center represents about 6,800 election supervisors in counties and other jurisdictions nationwide.

The House has passed a bill to provide up to $2.65 billion over three years to set minimum standards for national elections that would include modernizing voting equipment, improving voter education and training election administrators and poll workers. The effort has hit a snag in the Senate, however, over the insistence of Republicans that first-time voters be required to show photo ID or other documentation to vote.

In Palm Beach County, LePore has held more than 500 demonstrations with the county's $14.4 million voting machines. Fifteen of Florida's 67 counties purchased touch-screen machines. The other counties opted to use optical scan ballots, in which voters pencil in ovals next to a candidate's name, as with standardized school tests.

With touch screens, voters select a candidate by touching a circle next to the person's name. The technology allows voters to review their selections. It also includes some fail-safe measures. For example, it won't allow voters to mistakenly mark more than one candidate in a single race or skip marking a particular race. Such "over-votes" or "under-votes" were a problem in 2000.

The equipment had a rocky debut in Palm Beach County this winter. Problems in two municipal elections led losing candidates to file lawsuits and demand recounts. One of the suits has been dropped.

LePore says touch-screen problems were minimal. This year, some 65,000 people voted in 20 municipal elections, she says, and about twice that number have tried the new technology at demonstrations. The county has 700,000 registered voters.

"The equipment has worked just fine," says LePore, 47, who is serving a second term.

LePore was pilloried in 2000 for the design of the butterfly ballot. It listed the candidates on facing pages instead of down one page. She did it to make the ballot easier for seniors to read, but many voters were confused about which hole to punch for their candidate.

She says she doesn't like to relive those days after the 2000 election, when she received death threats and had to have a security detail.

But memories of that time still divide county voters. Many Democrats say victory was stolen from Gore, while many Republicans say a rightful Bush win was unfairly tainted by protests and recounts.

Bud Harvey, 79, an Elks member and a Republican, praised the new technology after his tryout: "The Republicans are going to win again. This time, without any problems."

Suwanee Voters First In State To Use Electronic Voting Twice

August 13 , 2002

Suwanee.com

When City of Suwanee residents vote in next week's special City Council election, they will be the only voters in Georgia using electronic voting equipment and the first voters in the state to use electronic voting twice. The state will use electronic voting beginning with this November's elections.

The City was one of 13 communities statewide to participate in the Secretary of State's electronic voting pilot program last November when residents approved by a wide margin a referendum that allowed the City to obtain $17.7 million in general obligation bonds to acquire and preserve land for open space, greenspace, neighborhood parks, interconnected greenways and trails, and passive recreation areas.

Voters last fall seemed generally pleased with electronic voting. "It was great," said Suwanee resident Darlene Worsham of her experience. "Fast and easy."

Suwanee residents will cast their ballots next week using one of eight electronic voting machines that will be available from 7 a.m. - 7 p.m. at Suwanee City Hall, 373 Highway 23. Voters will elect a City Councilmember to complete the term of Andrew Krieman, who has moved out of state; the term expires December 31, 2005. Candidates for the City Council seat are Tucker Balch, Jace Brooks, Jim Lenahan, and Earl Mitchell.

Poll workers will be available to assist voters who have questions about using the electronic equipment, which is being provided by VoteHere, an electronic and online voting systems company based in Bellevue, Washington.

Suwanee voters will need to go to their regular county precincts as well in order to participate in the August 20 primary election.

Absentee voting for Suwanee's City Council seat is available through August 19. Requests for absentee ballots must be made in writing or in person at City Hall. For more information about the City's August 20th special election, contact Elvira Rogers at 770/945-8996.

District of Columbia to Provide Touch Screen in Every Precinct Under Settlement with Disabled Voters

By Aron Goetzl

electionline.org

In a landmark settlement that could have ramifications for other jurisdictions that use optical-scan machines, disability rights advocates announced this morning that the District of Columbia will purchase at least one accessible touch-screen

system for every city polling place in time for the 2004 primary.

“We are utterly thrilled to resolve this case,” said Linda Royster, executive director of the Disability Rights Council of Greater Washington. “[Disabled voters] have been excluded from voting for years by architectural barriers and the way voting took place. Now they will have accessible voting machines.”

Sequoia Voting Systems will provide the touch-screens to the city at a cost of about $1 million, Royster said. She noted the company, which manufactures the District’s optical-scan systems, was a natural choice to provide touch screens.

A spokesperson for D.C. government was unavailable for comment today. The city did not send a representative to this morning’s press conference.

Advocates say the District will now become the largest metropolitan area to provide such equipment to voters with disabilities. The agreement arose from a lawsuit filed last year in U.S. District Court by the American Association of People with Disabilities (AAPD), the Disability Rights Council of Greater Washington and five disabled voters calling for the D.C. government to buy technology that enables disabled voters to cast a secret ballot.

The decision comes just one year after the city purchased a $1 million optical-scan voting system in 2001 to replace its punch-card machines that had been used since 1979 and months after the election officials completed a city-wide education program to train voters on the new machines. The District’s Sept. 10 primary marks their first use.

Disability advocates protested the upgrade to optical-scan equipment because voters who are blind or cannot use their hands are unable to cast a ballot without assistance. The lawsuit argued that D.C. election officials refused to acquire

touch-screen machines, which are accessible to disabled voters.

“D.C. has finally agreed to fulfill its legal and moral obligation,” said Marc Fiedler, chairman of the Disability Rights Council board. “This is a victory for the entire city which stands to benefit from increased participation of disabled voters.”

If disability rights advocates have their way, they could be celebrating similar victories against other optical-scan jurisdictions in the near future. The groups filed a similar suit against Duval County, which includes Jacksonville, Fla., and promise to take the fight to more places, given the rush to acquire new systems post-Florida 2000. According to Election Data Services, approximately 40 percent of the nation’s voting jurisdictions used optical-scan machines in 2001.

“This is a major signal to the hundreds of jurisdictions across the country purchasing new optical-scan systems,” said Jim Dickson, the AAPD’s vice president for government affairs. “That will not be allowed.”

Added Royster, “I see optical scan going right out the window. It is simply not legal to purchase a new voting system and not make that accessible to people with disabilities.”

But Doug Lewis, head of the Election Center and a member of electionline.org’s Advisory Board, doubted whether the District’s settlement would have as far-reaching impact on the nation’s election system as advocates for the disabled predict. He cited ongoing Congressional negotiations on a major election overhaul bill that could result in what these disability rights groups want – an accessible voting machine in every precinct in the country.

“If federal legislation passes and they fund the direct recording electronic

machines, then that takes care of the problem," Lewis said today from the Election Center's summer conference in San Antonio. "The settlement sounds like it is mirroring federal legislation."

Dickson said he hopes today's announcement will spur Congress to finalize a bill with the accessible-machine provision. The District could be reimbursed for purchasing these new touch-screen machines under the current language in the Senate version of election reform, he said.

"It is time for them to buckle down to business," he said.

Although the new machines will not be ready for use in the city's 2002 elections, as the suit originally called for, they will be on display for educational purposes in half of all precincts in the September primary and the other half in the November general election. Advocates said today that the city is seeking volunteers to demonstrate how to use the touch-screens during both elections.

Subject: electionline.org ALERT -- August 16, 2002: Election Administration Preview of August 20 Georgia Primary

ELECTION ADMINISTRATION PREVIEWS 2002

Georgia Primary – August 20, 2002

Major Races: Republican nomination for Governor; Republican nomination for U. S. Senator; nominations for 13 Congressional seats; nominations for Secretary of State and other statewide constitutional offices; and nominations for all state legislative seats.

Voting Systems: With Georgia $B!G (Bs new statewide touch-screen system set to debut in the November election, Tuesday could mark the last major election for counties $B!G (B current voting systems – paper ballots (2 counties), lever machines (73), punch cards (16), optical scanners (66) and touch screens (2). A slide show identifying what system each county uses can be found at: http://www.sos.state.ga.us/vote_comm/election_terms_files/frame.htm

Background: Tuesday $B!G (Bs primary features a number of key races on the ballot with national implications. But perhaps just as significant, Georgia $B!G (Bs counties will use different voting machine types for the last time in a major statewide election, excluding a possible September runoff contest. When voters go to the polls in November, they will use a new $54 million Diebold touch-screen system. In doing so, the state will become the first to go completely high-tech. The total overhaul of Georgia $B!G (Bs elections system began almost immediately after November 2000, when the state experienced a high number of spoiled punch-card ballots as well as long lines at the polls. Officials have said that only the wide margin of George W. Bush $B!G (Bs victory in the state prevented Georgia from being $B!H (Banother Florida. $B!I (B In 2001, the state legislature, with the backing of Secretary of State Cathy Cox, required all counties to adopt a more modern, uniform voting system by 2004. A state commission subsequently examined options and eventually recommended Diebold $B!G (Bs machines. The state inked its deal with the company for 19,000 new touch-screens in May of 2002. $B!H (BThis is a massive undertaking. We $B! G (Bre excited to be the first to do this, $B!I (B said state elections director Linda Beazley.

New in Election Administration:

$B!| (B **New Machines:** Two counties – Hall and Marion – will use the new touch-screen machines Tuesday, due to problems with their prior systems. Beazley said Georgia officials will be closely monitoring the results in those two counties as a possible harbinger of what might happen in the fall. Although the rest of the state $B!G (Bs 159 counties will not use the touch-screens to record actual votes, at least one will be available for demonstration purposes in every Georgia precinct. Beazley said the state will use Tuesday as an opportunity to

educate voters on how to use the new machines in preparation for November. In 2001, several municipalities experimented with touch-screen machines during local elections.

$B!| (B **Old Machines:** *The Atlanta Journal-Constitution* reported in July that New York State has agreed to purchase 400 lever machines from Georgia once they are phased out after the primary elections.

$B!| (B **Legislation:** S.B. 213 authorized the state to purchase the new uniform touch-screen system. It also allows counties to purchase additional direct recording electronic (DRE) machines beyond what the state has allotted to them, but they must do so at their own cost. Currently, the state has purchased about one machine per 200 voters. Cherokee County, for example, will purchase about 170 machines, *The Atlanta Journal-Constitution* reported. The bill also gave the Secretary of State $B!G (Bs office the ability to remove dead voters from the rolls.

$B!| (B **Legislation:** S.B. 414 established provisional balloting for voters who claim to be properly registered but do not appear on the rolls when they show up to vote. The law however does not go into effect until October, so provisional ballots will not be available Tuesday.

$B!| (B **Voter Education:** In an effort to familiarize voters with the impending switch to new voting technology, the Secretary of State $B!G (Bs office created positions for 13 regional voter education coordinators. They have already been at work for two months, Beazley said. The state will also mail a color brochure with instructions for how to use the new machines to every registered voter in the state.

$B!| (B **Precinct Locations:** Georgia residents can now locate their polling

places and figure out who they are able to vote for at the Secretary of State $B!G (Bs web site.

Yes - Diebold fully acquired Global Election Systems and they are currently operating as a wholly-owned subsidiary of Diebold, Inc - both US and Canadian operations.

Tracy - do you know of anyone else within DES that is operating on a Visa? Can you put the questions out there and find out for Carrie? Thanks!

Sharon

Sharon,

Sophia Lee's attorney that prepared her visa application is looking into the fact that she did not get an approval notice. Since Global's name has changed since then, an option would be to apply for a new visa under the Diebold Election Systems name. Can you please read his message below and verify the relationship between Diebold & DES. Thanks!

Carrie

Also, can you please verify that there are no other DES associates on visas. I don't want anyone slipping through the cracks!

Someone needs to update me concerning Diebold's acquisition of Global. Normally, a new petition isn't required where a company acquires all the assets of another company, assuming the qualifying relationship still exists. The L petition requires related entities in the U.S. and abroad. Did Diebold acquire the Canadian and U.S. operations of Global? Is there still a parent-subsidiary relationship in existence? If not, we'll need to look at another visa category for Sophia.

I have a question related to all this: What company did this visa relate to? Was it still Global then, or was is in Diebold Election System's name? If its in Global's name, this could pose another problem since the company really doesn't exist anymore. Do we need to file a new petition to change the company name anyway?

Ladies:

It is going to take some time to get a response from the liaison for the service center that should have issued Sophia's approval notice following her entry in April 2002. In the meantime, there are a couple of options: (1) attempt travel as scheduled with I-94, passport and copy of packet submitted to Peace Arch in April 2002 and see what happens; if denied entry, we proceed to other options; if admitted, we follow up with service center to get the approval notice; (2) prepare new I-129 and employer support letter and have it adjudicated at the chosen port of entry (this would require some quick action on everyone's part, but is certainly workable from our end). Let me know how you want to proceed.

Best regards,

John D. Smart

Hi Mr. Smart,

In terms of your questions:

1. When and where did Ms. Lee encounter a problem entering the U.S.?
>> I encountered a problem entering the U.S. on July 16 via the YVR
>> Vancouver, B.C.) airport on route to Los Angeles, CA. Previously,
>> I had no problem entering on many occasions using my new I-94.

2. Also, did Ms. Lee get the new I-94 at the Peach Arch in April 2002 or
another border crossing location?
>> I received my new I-94 at the Peach Arch border crossing location.

By the way, I am scheduled to travel to Los Angeles on August 20th.

Thank you all for your assistance on this matter.

Subject: RE: L-1B Visa for Sophia Lee

Dear Ms. Flagg:

My recollection is that Sophia Lee was in Canada at the time she needed an extension of her L visa (i.e., her original L visa was soon to expire when she needed to return to the U.S.) I prepared an extension packet for submission to INS at the Canadian border (which the INS border office will treat as a new L petition). The border immigration/free trade officer apparently reviewed and approved her L petition/extension, as evidenced by her admission with a new I-94 departure date of April 14, 2003. At that point, my understanding is that the free trade officer should have forwarded the paperwork to the applicable INS service center, which would then issue the I-797 approval notice. I have never received an approval notice for Ms. Lee. That could be a result of several events: (1) the free trade officer didn't forward the petition to a service center: (2) the free trade officer didn't forward the G-28 form to the service center; however, in that case, an approval notice should still have been sent to Global Elections Systems and/or Ms. Lee; (3) the approval notice was lost in the mail; (4) for reasons unknown, the service center didn't adjudicate the new petition and issue an I-797.

A couple of things aren't clear to me from your email. When and where did Ms. Lee encounter a problem entering the U.S.? Also, did Ms. Lee get the new I-94 at the Peach Arch in April 2002 or another border crossing location?

If you can provide this information, I can follow up with the

appropriate
free trade officer and/or service center and try to find out why no
I-797
was issued.

Touch-screen machines get high marks in Marion County
Marion one of two counties testing new vote machines
BY HARRY FRANKLIN
State Editor

BUENA VISTA, Ga. - Merry Taylor said she thought she might have to review the new touch-screen voting machines before casting her ballot Tuesday.

But after watching someone else get a demonstration on the Diebold machine, the Buena Vista resident said, "It's fairly self-explanatory. They are much easier than the old machines. I like them a lot. I liked being able to review it also."

She expected to see a line of people waiting to vote at the Marion County Courthouse because voters would need demonstrations. But voters moved through swiftly, with seven machines in service.

Jacquelyn Statham of Buena Vista also was pleased with the new machines.

"Yes, I've voted on the old machines," she said. "These are better, a lot quicker and more convenient."

Dave Moyser of Buena Vista, formerly of Chattahoochee County, said he was used to the old

lever voting machines.

"I like this better," he said. "The instructions are very clear. You could read it better. It's easy to change your ballot. I didn't think the old machines were bad, but I guess this is more accurate."

Those observations pleased Jeff Hintz, a project manager with Diebold, which won the contract from the state to supply Georgia's 159 counties with the new voting machines -- 20,000 needed statewide -- for November's general election. Only Marion and Hall counties used the new machines in Tuesday's primary elections.

"We have nine people in Marion County today, one at each of the seven precincts and two of us from out of state," he said. "So far, everybody seems to accept it. It's simple and easy to use. I don't think anybody has had a problem using it."

The company's biggest concern, Hintz said, is "just getting training to the customers with such a short period of time."

Using the new machines "really cut down on our assisted voters," said Marion County Elections Superintendent James "Bump" Welch. "We've had good compliments on the machines from everybody. We haven't had any complaints."

Michael Barnes, from the Georgia Secretary of State's office, arrived in Buena Vista about 5:45 a. m. Tuesday to spend the day observing operation of the new voting machines at all seven Marion County precincts. As he moved from precinct to precinct, Barnes found no problems.

"I'll be here until the last vote is counted," said Barnes, assistant director of elections for the Secretary of State Elections Division and project manager for the statewide rollout of the new voting system.

"We're hearing the same thing in Hall County as here," Barnes said about 3 p.m. "It's working on all cylinders and voters say they are satisfied with it."

Barnes watched county voting officials smoothly set up the system in Buena Vista Tuesday morning in about 30 minutes. If all the machines across the county came in at the same time -- which almost never happens -- Barnes said the results could be downloaded in about five minutes onto a memory card. The rapid return withstanding, accuracy, not speed, is being stressed during these tests.

Bud Fletcher, former election director in Bibb County, was assisting the state in checking out the new machines in Marion County. "I have a list of things they will no longer have to do using these new machines," he said. "All the units are handicap accessible, for example. These things are really, really good."

In the future, Barnes said the state will put election returns on a Web site and that organizations such as newspapers will be able to have local returns transmitted directly into their computer systems. The Macon Telegraph arranged to do that this year by installing a telephone hookup where ballots are tabulated in Macon.

"We were not ready to use all the available technology this year," Barnes said.

JACQUE SMITH, co-anchor:

Welcome back. It's time to get Street Wise this Monday morning.

TRACY McCOOL, co-anchor:

Joining us to offer financial advice is Rick Butacore (sp), President and CEO of Victory Capital Management. Good morning and thanks for being with us this Monday morning.

Mr. RICK BUTACORE (President & CEO, Victory Capital Management): Good morning, thanks for having me.

SMITH: Glad to see you this morning. We have a viewer

e-mail. Melissa says--she wants to know what you think about Diebold stock. She says they have a new voting system, and their stock seems to be very steady.

Mr. BUTACORE: Their stock has been great. In this market environment, any stock that has a dividend--that has a dividend like Diebold does is very, very good. Their earnings for the second quarter came in strong. Their business is at the core ATM business, which is what banks are using. During the 90's, when the banks were consolidating, that business slowed down, but this voting system is really an opportunity for them to grow, as well as some of those ATMs are aging. So as they start replacing them, their business will also grow. The other thing that's good about their business is 55 percent of their earnings are pretty recurring because they're on service agreements. So it's a good company. We would hold it, we own it ourselves (sic).

McCOOL: Okay.

Title: **Recent elections**

I wanted to thank each of you for a strong start to election season. Georgia, Johnson County, KS, Maryland, etc. went smoothly over the last 30 days. You may be aware that several of our competitors had trouble in Florida, which will not go unnoticed by election officials around the country. I am sure our sales organization will be able to leverage the current situation to a competitive advantage in the marketplace.

Your support during the various phases of the election processes enabled these recent successes. Your pride and performance is noted throughout the entire Diebold organization. We have a long way to go for the November election, but we learned some valuable lessons with these primaries that we will apply to the general elections in November.

There are too many individuals to thank individually but it's all those individual efforts adding up to a total team success.. Your colleges at Diebold from manufacturing, procurement, finance, etc. are all providing valuable resources and assistance - sometimes behind the scenes. There are many eyes on this business internally as well as externally by analysts and you have reason to be proud.

We will not rest nor be content with pass successes because there is much yet to be done. I just you to know how proud I am of what you are accomplishing.

Subject: PRESS RELEASE

The following release was distributed to the news and analysts wires today.

DIEBOLD TOUCH-SCREEN VOTING TERMINALS PERFORM WELL IN PRIMARY ELECTIONS

Voters in Maryland, Georgia and Kansas Show Widespread Acceptance to New Technology

Photo available at http://www2.diebold.com/whatsnews/pr/photo.htm

NORTH CANTON, Ohio - Diebold Election Systems, Inc., a wholly owned subsidiary of Diebold, Incorporated, today announced its touch-screen voting terminals performed extremely well in four counties within the state of Maryland. This election marks the state's first widespread use of the new AccuVote-TS electronic touch-screen voting system to be deployed statewide for future elections.

Over 40 percent of the state's 2.7 million registered voters, located in four counties -Montgomery, Prince George's, Allegany and Dorchester - were the first to use the new electronic voting system in Tuesday's primary election.

Currently, Diebold has touch-screen voting systems in more than 170 counties in many states throughout the United States, totaling more than 35,000 voting stations. Diebold's touch-screen system was not utilized in the recent Florida primary election.

"The response from voters was absolutely positive," said Margaret Jurgensen, election director, Montgomery County Board of Elections. "I spoke to many voters after they cast their ballots, and they stated that they loved the ease of voting with the new system. Many voters commented about the ease of reading the ballot on the touch screen. One visually impaired voter was able to vote for the first time without assistance because of the ballot magnification feature of the system. As with any new technology, our election staff grew more comfortable with the system as the day progressed, and we see the implementation of the touch screen system continuing to improve as our staff becomes more familiar with the technology."

"Our first touch screen primary election was a tremendous success," stated Donna Rahe, Dorchester County election director. "The voters of Dorchester County adapted to the touch screen technology extremely well, and the combined coordination efforts of the county's election staff and Diebold Election Systems caused a very smooth transition to the new election system."

Diebold experienced similar success in August when voters in Hall and Marion counties in the state of

Georgia tallied primary election results on the touch-screen voting system. Georgia is the first state in the country to implement a uniform statewide, computerized touch-screen voting system. Earlier this year, Diebold announced a $54 million agreement with Georgia officials to overhaul the state's election system technology making the state a national leader in replacing outdated election equipment.

"Georgia's new uniform electronic voting system received its first test in the Primary Election and the Diebold units passed with flying colors," said Georgia Secretary of State Cathy Cox, Georgia's chief elections official. "Throughout Hall and Marion Counties we heard extremely positive comments from voters and poll workers about the convenience, security and ease of use of the new AccuVote-TS units."

Voters in Johnson County, Kansas, were pleased with the touch-screen system as well. Approximately 99-percent of the voters who completed a comment card after using the system gave it a favorable rating.

"The Johnson County Election Office is proud of its reputation of making voting convenient and accessible," said Connie Schmidt, Johnson County Election Commissioner. "We are pleased to be the first county in the Midwest to deploy touch-screen voting computers to all polling places countywide."

"Considering the magnitude of these elections, which includes more than 870,000 registered voters within the four Maryland counties, we are very pleased with the results as every single vote was accurately counted," said Bob Urosevich, president of Diebold Election Systems, Inc. "Increased familiarity with the system will continue to make the process even smoother in future elections. We are working with the voters, poll workers and election officials to ensure that the entire process is intuitive and streamlined for everyone involved."

Diebold Election Systems offers a comprehensive solution that includes advanced technology, project management, service and voter outreach. The AccuVote-TS system offers voters an entirely new state-of-the-art design that represents a major leap forward in voting technology. Many voters feel comfortable using the system because the user interface is very similar to that of an automated teller machine. The reliable and efficient system accurately and securely captures each vote.

Title: **Message**

FYI...

October 4, 2002: Initial Summary of Election Reform Compromise

electionline.org's Aron Goetzl attended today's press conference and briefing regarding the election reform compromise reached in Congress this morning.
Until the actual legislative language is available, here is his summary of provisions in the compromise reached between Senate and House conferees, as described by staff aides:

- The disbursement of $865 million immediately in the following manner: $325 million for state grants; $325 million to replace punch-card and lever machines; $100 million for purchase of machines for disabled voters; and $115 million for other programs in the bill.
- The disbursement of an additional $3 billion during the next three years for state grants. A five percent (5%) state match is required to receive those funds.
- States and localities will be reimbursed for the purchase of new voting systems retroactive to November 2000.
- The creation of an Election Assistance Commission that will serve as a clearinghouse of elections information and administer the block grants. The body will not have rule-making authority.
- States are required to have provisional balloting procedures in place by 2004.
- Beginning in 2003, first-time voters who register by mail must provide a copy of or show in person a current valid form of identification. If the voter provides a photo ID (i.e., government ID, student ID, driver license), it need only include the voter's name. If the voter provides a document such as a credit card bill or utility bill, it must include the voter's name and current address.
- States are required to have statewide voter registration systems in place by 2006. These systems must feature electronic verification, which will enable states to match voters with a unique identifying number, such as the last four digits of their Social Security number, their driver license number or a state-assigned number. States are required to link their registration systems to their

respective motor vehicles department.

- States are required to meet voting machine requirements for the disabled by 2006.
- States are required to meet new posting requirements at polling places by 2004.
- States are required to establish an administrative grievance procedure to handle voters' complaints. These bodies must be in place before states are able to receive federal grants.

Of course, we will provide more detailed information as it becomes available.

Title: **Message**

For your information, the following press releases were issued recently in the Middle East They are part of Diebold's press kit for the GITEX Information Technology Exhibition taking place October 13-17, in Dubai, United Arab Emirates.

DIEBOLD TO SHOWCASE INNOVATIVE WIRELESS CONCEPT FOR THE ATM

Wireless E-commerce Makes Debut at Dubai's GITEX 2002 Show

DUBAI: Diebold, Incorporated will showcase a concept solution using emerging technology that integrates the functionality of automated teller machines (ATMs) and wireless delivery channels at GITEX 2002, to be held in Dubai from October 13-18, 2002.

On display in Stand K5-1, Hall 5, Diebold's two-way wireless data communication technology uses a PalmOS device with an infrared (IR) connection to an ATM powered by Windows(r) TCS Plus software. After the IR link is secured between an ATM and a mobile device, such as a mobile telephone or personal digital assistant (PDA), the mobile device takes over the transaction.

Pre-loaded transactions or transactions keyed into the PDA while at the ATM are quickly executed as information bursts back and forth with the ATM. Data that can be transmitted includes: advertising, direct marketing information or graphical data such as an account statement.

Explaining the concept, Hassan Hares, Business Development Manager, Diebold Middle East, said: "In the future, consumers may be able to utilize the ATM in the same manner in which they synchronize their mobile device with information from their personal computer. Financial institutions can utilize e-mail messaging to notify their customers of scheduled transactions and other time-sensitive, useful information."

Additionally, a wireless application also satisfies the bank's need for high service levels that delight their customers and achieve customer retention. The consumer benefits by saving time with pre-loading transactions, keeping their finances current, and receiving useful information like stock quotes, map directions, and promotional information tailored to their needs. Diebold delivers this wireless integration with the ATM through existing hardware and software that is available in the marketplace today.

In 2002, some 70 million consumers worldwide will have wireless mobile devices that send and receive data via the Internet. "Our wireless application demonstrates how Diebold can implement channel integration and provide banks with a customer retention strategy for consumers adopting online e-commerce solutions," explained Hares. "It provides consumers with more options to conduct business and communicate with financial service providers even when they are on the move and do not have access to a home office or personal computer."

Diebold's wireless concept gives financial institutions a high-value customer relationship management (CRM) investment strategy by providing consumers with another touch-point for interactions, transactions and useful information. The wireless model works via a two-way transfer of data while the consumer is in front of the ATM terminal, which is a secure network by which consumers can send and receive information without using valuable airtime on their wireless equipment.

Customers can then dispense a paper receipt directly from the ATM, store an electronic receipt on their hand-held device, or access and review the stored data on the mobile device at their leisure at a separate location away from the ATM.

Diebold Introduces New Custom Applications Platform

Vendor-independent solutions using Agilis Power(tm) will offer customers increased flexibility, functionality and profitability throughout their network

DUBAI: Diebold, Incorporated, (NYSE: DBD), a world leader in integrated self-service solutions, announced that it will shortly unveil in the Middle East its trendsetting Agilis Power(tm), a new development environment that enables Diebold Professional Services to create vendor-independent custom applications for automated teller machines (ATMs).

Using Agilis Power, Diebold's worldwide software and self-service experts can help financial institutions implement customized applications that run across a multi-vendor ATM network. This gives consumers a consistent user experience every time they access their financial institution, while reducing the operating costs associated with running a multi-vendor network.

Diebold's Professional Services experts help financial institutions easily migrate to the newest technologies with enhanced flexibility and speed. Employing innovative Microsoft Windows(r) and .NET (tm) Framework technology, Agilis Power, the base software architecture, allows Diebold to use

common software components across multiple systems and devices for greater consistency of design and ease of implementation.

A top Diebold M.E. official said that this year's GITEX 2002, to be held at the Dubai World Trade Center from October 13-18, 2002, would provide the launch-pad to showcase the concept to the region's customers. "Custom applications built using Agilis Power allow our customers to take advantage of Diebold's extensive professional services expertise and smoothly integrate new vendor-independent applications into their entire ATM networks," explained Hassan Hares, Business Development Manager for Diebold Middle East.

Built on an industry-leading INvolve(r) middleware platform from Nexus, Agilis Power provides an open architecture that takes advantage of industry-standard technology. Diebold's dedicated software development resources experienced in large-scale customer applications and specialized solutions use Agilis Power to assist financial institutions in the implementation of a solution customized to their needs.

Diebold Professional Services' project managers, technical trainers and systems engineers are also deployed to support development efforts and coordinate these engagements.

"This solution will help maintain the integrity of the user experience, regardless of the channel the consumer selects. Through expanded services and direct marketing, the financial institution can effectively increase revenue potential, as well as maximize their Customer Relationship Management strategies. Additionally, Agilis Power's custom applications provide the flexibility financial institutions need in order to add enhanced functionality and web capabilities to their ATMs," Hares added.

Please welcome Donna Caylor to the Customer Service Team. Donna officially started on Monday, October 14, and is based in the McKinney office. Her role will be focused on Customer Service (CS) Operations. Major responsibilities include:

- assisting with proposal preparations
- developing processes and procedures for reporting billable customer service activity
- maintain service related pricing and communicating that pricing both internally & externally
- interface between project managers and the internal order fulfillment processes
- develop & coordinate a hardware preventive maintenance program
- provide a communication focal point within CS when I am not available

Donna comes to Diebold Elections with over 15 years of experience, primarily with EDS and Nortel Networks. Please welcome her to the team!

Ladies and Gentlemen:

We are having some technical difficulty with our phone lines. We have one
phone line down and the others are all in use. We are addressing this situation and you will see improvement by tomorrow.

I apologize for the inconvenience, please continue trying to reach us and
you will get thru. There is someone answering the phones during business
hours at all times.

Thanks for your patience.

Third Quarter Conference Call

We will release third quarter financial results on Wednesday, October 23, before trading begins on the New York Stock Exchange. At 10:00 a.m. (EDT) that day **Wally O'Dell,** chairman, president and chief executive officer, and **Greg Geswein,** senior vice president and chief financial officer, will discuss the results during a conference call. Associates are encouraged to listen to the call from Diebold's Web site at http://www.diebold.com. The replay can also be accessed on the site for up to one year after the call.

Boldly Speaking Online - October Issue

Check out the most recent issue of *Boldly Speaking* Online at http://doc/ficcascnew/default.htm. This issue contains a *"We won't rest"* success story about sales and implementation teams who came to the rescue of a former Mosler customer, Maine State Employees Credit Union. To find out more, visit the *Boldly Speaking* Web site.

Diebold Viewed as Technology Builder in Ohio

The October 15 issue of the *Akron Beacon Journal* chronicled Gov. Bob Taft's recent visit to Diebold headquarters in North Canton, Ohio. The article discusses Ohio's position in the United States as a technology builder in comparison to other states. Kevin Newton, vice president of Global Design, is quoted in the article as saying technology workers like to know they are moving into a region with several employers with challenging job possibilities - and it's important for Ohio to be able to support that in order to succeed.

To read the entire article, please visit http://www.ohio.com/mld/beaconjournal/2002/10/15/news/local/4287663.htm

More Diebold Election Systems in the News

The *Atlanta Journal-Constitution* featured an article in its October 13 edition which focuses on blind and visually impaired voters in Georgia being delighted by DES' voting equipment -- enabling them to cast their ballot in privacy for the very first time. The *AJC* also featured two articles in its October 17 edition outlining the training and preparation process of two counties in advance of the November 5 election.

Also, the October 14 edition of the San Francisco *Chronicle* ran an article on Alameda county's preparation for the upcoming November 5 election using DES' touch-screen voting terminals.

To view the full article in the *Chronicle*, please visit http://www.sfgate.com/cgi-bin/article.cgi?file=/chronicle/archive/2002/10/14/BA25040.DTL

Diebold Counts (and Sorts) in Casinos

Casinos are one of the target markets for the Electronic Security and Currency Systems Group, which sells, installs and services Toshiba's currency processing systems in the United States. Starting in November, we will be running an ad in *Casino Journal* and *Indian Gaming* that promotes the Diebold difference to this audience.

You can see the ad at http://doc2.diebold.com/ficcglo/ads/CasinoSecurity.pdf.

Following Diebold Stock: What Happened Last Week

Shares of Diebold (DBD) turned in their second straight weekly gain along with a more positive sentiment in the overall markets. Volume was very light early in the week. Tuesday saw DBD open on a $0.50 uptick from the previous day's close and shoot higher by nearly $1.00 in the morning; however, volume remained light. On Wednesday, overall markets turned lower and passed along their technical rebound to DBD, which lost nearly $1.00 in the first half hour's trading. Positive sentiment caused by economic indicators including housing starts and industrial production bounced consumer-related stock higher again on Thursday. On Friday, DBD closed up $0.31 on high volume.

Upcoming Diebold Tradeshows

Third Quarter Conference Call

We will release third quarter financial results on Wednesday, October 23, before trading begins on the New York Stock Exchange. At 10:00 a.m. (EDT) that day **Wally O'Dell,** chairman, president and chief executive officer, and **Greg Geswein,** senior vice president and chief financial officer, will discuss the results during a conference call. Associates are encouraged to listen to the call from Diebold's Web site at http://www.diebold.com. The replay can also be accessed on the site for up to one year after the call.

Boldly Speaking Online - October Issue

Check out the most recent issue of *Boldly Speaking* Online at http://doc/ficcascnew/default.htm. This issue contains a *"We won't rest"* success story about sales and implementation teams who came to the rescue of a former Mosler customer, Maine State Employees Credit Union. To find out more, visit the *Boldly Speaking* Web site.

Diebold Viewed as Technology Builder in Ohio

The October 15 issue of the *Akron Beacon Journal* chronicled Gov. Bob Taft's recent visit to Diebold headquarters in North Canton, Ohio. The article discusses Ohio's position in the United States as a technology builder in comparison to other states. Kevin Newton, vice president of Global Design, is quoted in the article as saying technology workers like to know they are moving into a region with several employers with challenging job possibilities -

Benefit Update - Reimbursement Accounts

More Diebold Election Systems in the News

The *Atlanta Journal-Constitution* featured an article in its October 13 edition which focuses on blind and visually impaired voters in Georgia being delighted by DES' voting equipment -- enabling them to cast their ballot in privacy for the very first time. The *AJC* also featured two articles in its October 17 edition outlining the training and preparation process of two counties in advance of the November 5 election.

Also, the October 14 edition of the San Francisco *Chronicle* ran an article on Alameda county's preparation for the upcoming November 5 election using DES' touch-screen voting terminals.

To view the full article in the *Chronicle*, please visit http://www.sfgate.com/cgi-bin/article.cgi?file=/chronicle/archive/2002/10/14/BA25040.DTL

Diebold Counts (and Sorts) in Casinos

Casinos are one of the target markets for the Electronic Security and Currency Systems Group, which sells, installs and services Toshiba's currency processing systems in the United States. Starting in November, we will be running an ad in *Casino Journal* and *Indian Gaming* that promotes the Diebold difference to this audience.

You can see the ad at http://doc2.diebold.com/ficcglo/ads/CasinoSecurity.pdf.

Following Diebold Stock: What Happened Last Week

Shares of Diebold (DBD) turned in their second straight weekly gain along with a more positive sentiment in the overall markets. Volume was very light early in the week. Tuesday saw DBD open on a $0.50 uptick from the previous day's close and shoot higher by nearly $1.00 in the morning; however, volume remained light. On Wednesday, overall markets turned lower and passed along their technical rebound to DBD, which lost nearly $1.00 in the first half hour's trading. Positive sentiment caused by economic indicators including housing starts and industrial production bounced consumer-related stock higher again on Thursday. On Friday, DBD closed up $0.31 on high volume.

Peers Weekly Change with Volume

Benefit Update - Reimbursement Accounts

Reimbursement accounts put more money in your pocket by allowing you to pay for childcare and certain medical expenses with pre-tax dollars.

Here's how it works:

1. Estimate the amount of eligible expenses at http://doc2.diebold.com/fihr/Benefits%20Pages/RA%20worksheet.doc.

2. Enroll for the reimbursement accounts during Diebold's benefits open enrollment in November.

3. When you have an eligible expense, pay it first and submit the receipt. You are reimbursed via direct deposit.

To learn more about the reimbursement account plan profile, visit http://doc2.diebold.com/fihr/Benefits%20Pages/RAPlan%20Profile.doc.

To learn what expenses are eligible, visit http://doc2.diebold.com/fihr/Benefits%20Pages/RA%20eligible%20and%20ineligible%20expenses.doc.

New Auto Enrollment for the Diebold 401(k) Plan

If you are an eligible associate not participating in the 401(k) plan, you recently received a personal identification number (PIN) from Vanguard. The PIN enables you to enroll in the plan at your convenience by calling Vanguard

at 1-800-523-1188 or online at www.vanguard.com. If you have any questions, please contact Cassandra Williams in human resources 330-490-5827.

Change of Address

Effective October 31, Branch 8039 in Knoxville, Tenn., will no longer be using a P.O. Box address. Please mail all correspondence to:

Diebold, Incorporated
1832 Midpark Rd., Suite A
Knoxville, TN 37921

Personnel Announcement

Per **Danny O'Brien**, senior vice president, global product management and engineering, United Kingdom.

FRANK MONACO has been named director of global hardware products. He will be responsible for the hardware development organization in EMEA, including the associates in Ivrea, Italy, and Erpe Mere, Belgium.

Prior to joining Diebold, Monaco was European technical director (European vice president of engineering), vice president of new business and technology for Invensys. He attended State University of New York in Buffalo and received a degree in electronics engineering from Universita' Degli Studi di Genova in Italy. He also holds a doctorate in computer science from Pacific Western University in Los Angeles, Calif.

Quote of the Week

County Democrats say early votes miscounted

Court hearing delayed as meeting planned on touch-screen problem; GOP criticizes filing

10/23/2002

By ED HOUSEWRIGHT and VICTORIA LOE HICKS / The Dallas Morning News

Dallas County Democrats asked a state district court judge to shut down early voting Tuesday because some touch-screen ballot machines hadn't accurately recorded votes.

But Democratic leaders opted later to delay a court hearing, agreeing to meet Wednesday with county elections officials and representatives of the Nebraska-based ballot machine manufacturer for an explanation.

The Democrats said they received several dozen complaints Monday and Tuesday from people who said that they selected a Democratic candidate but that their vote appeared beside the name of a Republican on the screen. They also said some votes cast for Republicans were counted for Democrats.

Problems were reported in seven or eight of the 24 early voting locations, and 18 machines were taken out of service, said Bruce Sherbet, county elections administrator. Affected races included the hotly contested U.S. Senate race between Republican John Cornyn and Democrat Ron Kirk, the former Dallas mayor.

Democratic officials said they didn't know how many votes might have been inaccurately recorded. No problems were reported in other counties.

"We don't know if we lost 10 votes, 100 votes, 1,000 or 10,000," said Susan Hays, chairwoman of the Dallas County Democratic Party.

Dallas County Republican Party Chairman Nate Crain called the Democrats' court filing "a blatant attempt to stop people from exercising their right to vote early."

Early voting began Monday, and more than 16,000 Dallas County voters had cast ballots, county officials said. Early voting ends Nov.

1, and Election Day is Nov. 5.

More than 400 electronic ballot machines – introduced to Dallas County in 1998 – are used at polling places. If a voter reported a problem on a machine, he or she was directed to another machine at the same location, and the vote was properly recorded, Mr. Sherbet said.

He said he would be surprised if any votes were lost or assigned to an unintended candidate. It should have been obvious to voters if their vote did not register by the candidate they intended, and voters could have sought assistance from a poll worker, Mr. Sherbet said.

Jostling causes problem

Similar, isolated problems have occurred in previous elections, he said. They normally occur when the machines are jostled in transport and get "misaligned," Mr. Sherbet said.

Readjusting and properly aligning the machine's mechanisms, he said, is a quick, simple process for a county elections employee who has been trained by the manufacturer.

The touch-screen machines – made by Election Systems & Software – have been used in more than 90 Dallas County elections in the past four years and have an outstanding record overall, Mr. Sherbet said.

"Any touch-screen system – from a voting machine to a Palm Pilot to an ATM – can have calibration issues," he said. "We want to address every concern."

For early voting only

The touch-screen system has been used in Dallas County only for early voting. On election days in Dallas County, voters use pens to fill in circles next to candidates' names on paper ballots. The ballots are read by scanning equipment.

County officials have said they would prefer to use touch screens on Election Day, too, but the cost of buying enough machines is prohibitive.

Ms. Hays said it appears that the problem was with the voting equipment, not county elections personnel.

"This is a vendor's problem," she said. "They need to prove to us that voters' votes are being cast as they want."

Last year, the outcomes of 18 suburban Dallas County elections remained unclear days after the election because of vote-counting problems. About 5,000 of nearly 18,000 ballots cast during the early voting period were not properly assigned to candidates.

Computer problems were caused when a candidate was added after early voting had started. The county faulted ESS officials for not recognizing that the addition could cause problems.

Mike Limas, chief operating officer of ESS, defended the voting system Tuesday.

"We're continuing to work with the county to see if we can validate what's being discussed and resolve it," Mr. Limas said. "This really doesn't happen very often, although obviously it's very serious to someone who feels that their vote is not being accurately counted."

ESS says it is the world's largest manufacturer of voting equipment. The company says it has handled more than 40,000 elections representing more than 100 million ballots. It contracts with 1,700 jurisdictions in 49 states, Canada and other countries.Some county Republican leaders said Tuesday that Democrats were exaggerating the extent of the voting problems for political gain.

Dallas County Commissioner Jim Jackson said it would be "a travesty" to shut down early voting based on the temporary restraining order request filed late Tuesday by Democratic leaders to try to halt the election.

"This is a partisan effort to disrupt the election because they are losing," said Mr. Jackson, a longtime Republican.The petition for a temporary restraining order said that "widespread" problems occurred in at least 11 early voting locations. A hearing before state District Judge Mary Murphy began Tuesday before the delay.

Some voters who wanted to vote a straight Democratic Party ticket instead had votes assigned to all Republican candidates, the court filing says.

'Gross violation'

The problem is a "gross violation of constitutional and statutory rights," it says.

Voter Kate Kettles told The Associated Press that she tried to vote for all Democratic candidates but that the computer highlighted Republicans all the way down the ballot. She said that an election official moved her to another machine but that it took several tries to get the correct candidates selected.

"It's the fact that I'm having to make a serious effort that is really disconcerting," Ms. Kettles said.

Mr. Kirk said he was concerned about the voting problems.

"The good news is that I know Bruce Sherbet," he said. "I know he's someone with integrity. We are pleading with voters to scroll through the ballot and make sure what the ballot reflects is the way you have voted."

Staff writers Gromer Jeffers Jr. and Todd J. Gillman contributed to this report.

As we announce our third quarter earnings today, I again want to compliment each of our associates for their continued good work during the past three months. Once again, in a climate that's been difficult for businesses around the world, we were able to achieve solid results during the past quarter.

The road ahead will be challenging. But if we continue to work together as a great global team - while maintaining our sense of urgency and 'We won't rest' approach in serving our customers - we will continue to thrive and succeed. Thanks again for all your efforts.

Wally

DIEBOLD ANNOUNCES RECORD THIRD QUARTER REVENUE AND EARNINGS

NORTH CANTON, Ohio - Diebold, Incorporated (NYSE: DBD) today reported third quarter net income of $44,080,000, or diluted earnings per share of $.61 on revenue of $529,799,000, at the high end of the company's previous guidance of $.57 to $.61. Included in the results for the third quarter was a gain of $.01 per share from the previously announced sale of owned and operated cash dispenser assets to Cardtronics. This compares to third quarter 2001 net income of $14,265,000, or diluted $.20 per share on revenue of $444,627,000.

In accordance with the adoption of Statement of Financial Accounting Standards No. 142, "Goodwill and Other Intangible Assets" (SFAS 142), Diebold discontinued amortization of goodwill as of January 1, 2002. Excluding goodwill amortization, realignment, special charges and MedSelect, the prior-year third quarter net income was $38,387,000 or $.53 per diluted share. This included $.01 earnings per diluted share related to the InnoVentry business, which did not repeat as a result of its cessation of operations.

Third Quarter Highlights

- Total revenue grew 19.2 percent and on a fixed exchange rate basis increased 21.0 percent. Earnings per share grew 15.1 percent, excluding goodwill amortization, realignment, special charges and MedSelect.
- Financial self-service service revenue grew 13.7 percent, and 14.0 percent on a fixed exchange rate basis.
- Total Asia-Pacific revenue increased 33.0 percent, and 31.6 percent on a fixed exchange rate basis.
- Total revenue for the Americas grew 20.9 percent and 25.7 percent on a fixed exchange rate basis.
- Total Europe, the Middle East and Africa revenue increased 5.3 percent, but declined 2.8 percent on a fixed exchange rate basis.
- Security solutions revenue grew 31.7 percent as the company continued to capture additional business in this segment.
- Voting solutions revenue reached $55 million during the quarter.

Financial Results

"I am extremely pleased with the strong revenue and earnings growth we reported in the third quarter, particularly the outstanding performance in our voting and security businesses," said Walden W. O'Dell, chairman, president and chief executive officer. "While revenue for financial self-service hardware remained weak during the quarter, we were encouraged by solid order growth, particularly in the Americas and Asia-Pacific. In addition, we grew our global service revenue by 15.2 percent through an intense focus on providing new services and continuing to gain market share."

"On a geographic basis, Asia-Pacific once again showed the strongest revenue growth at 33.0 percent, while the Americas grew 20.9 percent due to strong growth in security and voting. In Brazil, we continue to see demand for self-service as witnessed by recent strong orders there. Europe, the Middle East and Africa showed significant improvement sequentially, which is particularly encouraging in light of the tough comparison to the third quarter 2001, when a large portion of our total Euro conversion/ upgrade revenue was recorded."

Fixed Rate Third Quarter Orders

Despite a challenging global economic environment, total orders for product and service increased in the low double-digit range. The Americas increased in the double-digit range and Asia-Pacific orders increased in the high single digit range, while EMEA orders decreased in the low double digit range. Security orders remain strong, increasing well into the double digits.

Significant orders for the quarter included:

- A self-service order valued at more than $25 million from a large financial institution in Brazil.
- Self-service orders totaling more than $17 million from two large financial institutions in China.
- Self-service orders for more than $12 million from several financial institutions in the United States.
- A self-service order valued at $2.7 million from a financial institution in India.
- More than $2 million in upgrade orders from two financial institutions in Mexico
- Orders valued at more than $2 million for several financial institutions in Belgium.
- $1.6 million in security system orders for a major U.S. retailer and a large government facility.

Revenue

Total revenue for the quarter was up $85.2 million, or 19.2 percent and 21.0 percent on a fixed exchange rate basis. Total financial self-service revenue increased 1.0 percent and 3.0 percent on a fixed exchange rate basis. Security revenue grew 31.7 percent as the result of increased penetration in the financial security market.

Gross Margin

Total gross margin for the third quarter was 30.1 percent, down from 30.6 percent in the third quarter 2001. Excluding special charges, third quarter 2001 total gross margin was 31.8 percent.

Financial self-service product gross margin increased during the quarter, however, total product gross margin in the third quarter decreased to 31.1 percent from 34.6 percent, excluding special charges. The decrease was the result of higher security and voting sales in the current period, which carry lower gross margins.

Service gross margin was 28.9 percent and compared favorably to the 28.7 percent from the third quarter 2001 excluding special charges.

Operating Expenses

Total operating expenses for the quarter were 17.4 percent, down from 19.8 percent from the third quarter 2001. Excluding realignment, special charges and MedSelect, third quarter 2001 operating expenses were 18.4 percent.

Operating Profit

Operating profit was 12.7 percent of revenue, up from 10.7 percent from 2001. Excluding realignment, special charges and MedSelect, third quarter 2001 operating profit was 13.5 percent. The rapid growth of security and voting is the cause of the decrease of operating profit margin. There was no margin erosion in the core business.

-

Net Income

Net income was 8.3 percent of revenue compared to 3.2 percent in the third quarter 2001. Excluding realignment, special charges and MedSelect, second quarter 2001 net income was 8.0 percent of revenue.

Balance Sheet Items ($000's)

Diebold's balance sheet remains one of the strongest in any industry with a net debt to total capital ratio of approximately 11 percent.

While improvement in working capital was noted during the quarter, net debt increased due to the previously disclosed payment to the IRS in July 2002 related to the Company Owned Life Insurance and a higher overall income tax payment.

In July 2002, the company entered into a multi-year information technology outsourcing arrangement with Deloitte Consulting to transform specific business processes, administer application development, and provide related project management, maintenance and support. As part of this arrangement, the company purchased an Oracle global information technology platform, which will be reflected in property, plant and equipment and other long-term liabilities.

-

Stock Option Expense

On October 4, 2002 the FASB issued an exposure draft, Accounting for Stock-Based Compensation - Transition and Disclosure, which would amend SFAS 123, Accounting for Stock-Based Compensation. As part of this proposed amendment, companies electing not to expense stock options would be required to provide the pro forma net income and earnings per share information not only annually but also on a quarterly basis. While continuing to review the matter, the company has no current plans to begin expensing stock options. The company estimates that if it had expensed stock options (in accordance with SFAS 123), the full-year impact in 2002 would be approximately $.05 per share.

Pension Income

The company is in the process of reviewing key assumptions related to its pension plans for 2003. The company anticipates that it will be lowering pension plan assumptions from 2002 within the following ranges:

Based upon these anticipated lower assumptions as well as the stock market downturn this year, the company expects pension income to decline from approximately $5.0 million in 2002 to a net expense position in 2003 in the range of approximately $3.0 million to $4.0 million.

Currently, our pension plan remains adequately funded and we do not anticipate a need for additional funding at this time.

Pension income excludes retiree medical expense, which is considered to be a part of normal operating expense and is approximately $3.0 million for 2002.

Outlook

The following statements are based on current expectations. These statements are forward-looking and actual results may differ materially. These statements do not include the potential impact of any future mergers, acquisitions, disposals or other business combinations.

The global efficiencies that Diebold has experienced by balancing manufacturing, product rationalization, organizational alignment and process improvements will continue to benefit the company into the fourth quarter.

Taking these factors into consideration, expectations for the fourth quarter and year include:

- Fourth quarter revenue will increase in the mid single digit range vs. prior year including voting. Voting is not expected to contribute materially to revenue in the fourth quarter.
- Fourth quarter EPS to be in the range of $.66 to $.72.
- Depreciation and amortization to be approximately $17 to $18 million for the fourth quarter.
- Full year revenue growth of approximately 10 percent.
- For 2002, operating profit margins, excluding pension income, for the self-service business will be approximately 14 percent, while the security and voting business operating profit margins will be approximately 8 percent.
- Full year EPS to be in the range of $2.19 to $2.25, before the effect of the cumulative accounting change, which represents 12-15 percent EPS growth over 2001.
- A full year effective tax rate of approximately 32.0 percent.

Looking forward to 2003, while business unit forecasts have yet to be finalized and visibility is difficult given uncertain global economic conditions, management believes that through continued focus on speed, global efficiencies, and creative solutions to customer needs, the company will continue to gain market share. The company also expects positive gains in the global voting market as a result of our successful acquisition and integration of Diebold Election Systems. The following expectations do not include the potential impact of any future mergers, acquisitions, disposals, other business combinations or any impact from an unfavorable ruling on the Company Owned Life Insurance claim by the IRS. Given these factors management has the following expectations:

- 2003 revenue growth of 8 to 10 percent, on a fixed rate basis.
- Depreciation and amortization in the range of $70 to $75 million.
- Pension expense will negatively impact earnings per share by approximately $.08 to $.09 versus 2002.
- Effective tax rate of 32 percent.
- 2003 earnings per share is expected to be in the range of $2.32 to $2.45. This represents a 10 to 13 percent increase in EPS excluding pension impact.

Financial Information

Walden W. O'Dell and Senior Vice President and Chief Financial Officer Gregory T. Geswein will discuss the company's financial performance during a conference call today at 10:00 a.m. (EDT). Access is available from Diebold's Web site at www.diebold.com. The replay can also be accessed on the site for up to one year after the call.

Forward-Looking Statement

In the company's written or oral statements, the use of the words "believes," "anticipates," "expects" and similar expressions is intended to identify forward-looking statements that have been made and may in the future be made by or on behalf of the company, including statements concerning future operating performance, the company's share of new and existing markets, and the company's short- and long-term revenue and earnings growth rates. Although the company believes that its outlook is based upon reasonable assumptions regarding the economy, its knowledge of its business, and on key performance indicators, which impact the company, there can be no assurance that the company's goals will be realized. The company is not obligated to report changes to its outlook. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. The company's uncertainties could cause actual results to differ materially from those anticipated in forward-looking statements. These include, but are not limited to:

- competitive pressures, including pricing pressures and technological developments;
- changes in the company's relationships with customers, suppliers, distributors and/or partners in its business ventures;
- changes in political, economic or other factors such as currency exchange rates, inflation rates, recessionary or expansive trends, taxes and regulations and laws affecting the worldwide business in each of the company's operations, including Brazil, where a significant portion of the company's revenue is derived;
- acceptance of the company's product and technology introductions in the marketplace;
- unanticipated litigation, claims or assessments;
- ability to reduce costs and expenses and improve internal operating efficiencies; and
- variation in consumer demand for self-service technologies, products and services.

Diebold, Incorporated is a global leader in providing integrated self-service delivery systems and services. Diebold employs more than 13,000 associates with representation in more than 88 countries worldwide and headquarters in Canton, Ohio, USA. Diebold reported revenue of $1.76 billion in 2001 and is publicly traded on the New York Stock Exchange under the symbol 'DBD.' For more information, visit the company's Web site at www.diebold.com.

FYI - Internal communication - Third quarter results were very encouraging.

Quarterly *Boldly Speaking* Web cast - Q&A with Greg Geswein

Third Quarter Earnings News

Wireless Technology and Other Innovations

Following Diebold Stock: What Happened Last Week

Upcoming Diebold Tradeshows

Quarterly *Boldly Speaking* Web cast - Q&A with Greg Geswein

Do you have questions regarding our third quarter earnings announcement or other Diebold financial matters? For our third quarter Web cast, Greg Geswein, chief financial officer, will briefly review Diebold's performance and respond to your questions.

Please e-mail your questions to Anita Wright (wrighta@diebold.com) before the end of the day on Wednesday, October 30. We look forward to your participation.

Third Quarter Earnings News

Diebold's record third quarter revenue and earnings were covered in the October 24 editions of *The Canton Repository*, *The Akron Beacon Journal*, *The Cleveland Plain Dealer* and *Wall Street Journal* online. A replay of the third quarter conference call is available from our Web site at www.diebold.com. During the conference call Wally O'Dell said, "I remain optimistic about our ability to continue to capture market share and grow our business, producing sustainable superior performance and creating shareholder value."

Update on Breakfast Session with Wally O'Dell

Wally recently spent time with a group of associates reviewing our recent

performance and responding to their questions about current issues and opportunities. For more information, please review the notes from Wally's breakfast session at http://doc2.diebold.com/ficcascnby/Breakfast session.htm.

Wireless Technology and Other Innovations

The October issue of *America's Community Banker* mentions Diebold in two articles about ATM advertising, wireless ATMs and the Check Truncation Act. Due to Americans with Disabilities Act (ADA) proposals, ATMs may be required to be speech-enabled. This potential mandate, along with the new triple DES standards, will require ATMs to be far more powerful. However, the upgraded machines could broaden the range of possibilities for the ATM. Cassie Metzger, senior marketing manager, global marketing, is quoted.

Following Diebold Stock: What Happened Last Week

Shares of Diebold Inc. (DBD) outpaced the broader markets to finish the week ending October 25 higher, marking its third straight week of advances. Monday's trading showed heavy volume, moving nearly 300,000 shares of both buying and selling and trading large blocks amid a 5% drive higher on the day. Tuesday showed light volume, with only one notable institutional activity for the day. Wednesday's trading volume remained light as DBD released third quarter earnings figures. DBD traded closely with the overall market throughout the day. NCR Corp. (NCR) released its third quarter figures that showed disappointing results across all of its businesses; NCR fell $1.21 on heavy volume for the day and lost nearly 9% on the week after facing a round of downgrades from brokers Morgan Stanley, Lazard, and Robert W. Baird on Friday morning. Friday saw continued light trading in DBD with some small blocks totaling 40,000 shares.

Subject: CNN Voting Technology LIVE segment

Thanks to all of you for getting back to me today. I think this will be an exciting and interesting segment for our viewers next week. Now we just have to firm up a date! Does next Thursday work for everyone?

This segment will be a LIVE demo of machines from your respective companies in-studio here in Atlanta. The idea is to have CNN Technology Correspondent Daniel Sieberg walk our viewers through each of the machines and demonstrate features and usability. NOTE: THIS IS NOT A COMPARISON PIECE. We aren't going to rate or rank the machines. Because we have a wide audience, we want to show viewers across the nation what to expect in various precincts. "If you're in Houston, you'll see this technology next Tuesday, etc etc." "If you go to vote in Miami-Dade, here's what you'll find, etc etc"

Judy Woodruff and the producers of "Inside Politics" have already expressed much interest in this. CNN Headline News likes it, and the weekly CNN science and technology show "Next@CNN" has already planned to package it. What does that mean? Well, in addition to the LIVE studio hits, a piece will run twice on CNN the weekend before the election, and then have 21 other airings on CNN International, CNN Airport Network, and aboard Amtrak's Acela service. The bottomline is that your products will get a lot of face time as we go full-speed into our election coverage.

I understand all of you must be gearing up for Election Day, and your staffing must be spread pretty thin next week. That being said, perhaps all of you could just send us a demo machine and walk through the setup over the phone? You might be worried that we'd screw up the setup and make your company look bad to a national audience. DON'T WORRY! You have my word as a Generation Xer and CNN technology producer that I will setup everything properly and do a test run with you on the phone. I DO THIS ALL THE TIME WITH ALL SORTS OF CRAZY DEVICES! Of course, if you want to send a company representative, that's fine too. I just don't want that to derail the segment.

So how's next Thursday?

Alex Walker
Producer
CNN Science & Technology

Bush Signs Voting Changes Bill

Tuesday, October 29, 2002

WASHINGTON — President Bush signed legislation to revamp the nation's voting system and protect against the kinds of errors that threw his own election into dispute two years ago.

The White House scheduled a morning bill-signing ceremony for Tuesday, starting Bush's two-day respite from campaigning for GOP House, Senate and gubernatorial candidates in next Tuesday's elections.

Under the Martin Luther King Jr. Equal Protection of Voting Rights Act of 2002, states will receive $3.9 billion in federal money over the next three years to replace outdated punch-card and lever voting machines or improve voter education and poll-worker training.

The new law's protections against voting error will not affect next week's balloting but are scheduled to be mostly implemented in time for the 2004 congressional and presidential vote, which will most likely include Bush's re-election bid.

It was Bush's bitter 2000 Florida recount battle with Democrat Al Gore — with its confusing "butterfly ballots," half-perforated punch ballots and allegations of voter intimidation — that gave rise to the legislation. Bush's election was ultimately decided by the Supreme Court.

The House approved election changes late last year and the Senate followed suit in April, but Republican demands for strong anti-fraud provisions stalled reconciliation of the two versions for months. Lawmakers did not send a final bill to Bush until last Wednesday.

"This has been a long marathon, but the finish line is finally in sight and the winner is the American public," said Senate Rules Committee Chairman Chris Dodd, D-Conn. "This landmark legislation will ensure that everyone not only has the right to vote on Election Day, but that their voice is heard."

Beginning Jan. 1, first-time voters who registered by mail will be required to provide identification when they show up at the polls.

By the 2004 vote, states will be required to provide provisional ballots to voters whose names do not appear on voter rolls. Those provisional ballots would counted once valid registration is verified.

For 2006 balloting, states will be required to maintain computerized, statewide voter registration lists linked to their driver's license databases. States will also be required to have voting machines that allow voters to confirm the way they marked their ballot — and, if necessary, change their votes — before they are finally cast.

Such voting software was tested in one jurisdiction in the 2001 Virginia gubernatorial election. The Century Foundation, which reviewed the results, found that the "lost vote" rate went from between 600-700 votes in the 2000 election to just one vote in 2001, said Tova Andrea Wang, a staffer to the National Commission on Federal Election Reform who later oversaw the foundation's study.

"The bill goes a long way toward addressing a lot of the problems, but the extent to which the bill works relies on what the states do because they are given a lot of discretion," said Wang.

"A new polling machine is fine and great as long as people know how to use it, and there's no specificity in the legislation on poll-worker training and voter education."

Wang and other election experts also worry that discriminatory enforcement of the voter-ID

requirements could especially disenfranchise minorities, the poor, immigrants and students. She called the provision "something that may have to be revisited."

Voter turnout heavy despite rain

By Lynn Harasin, Channel 2 Action News

November 5, 2002 -- Voter turnout

Voting

Patt May, left, of Diebold Election Systems, talks with Allen Moss, poll manager at the Pine Log Fire Station voting precinct in Pine Log, Ga., Tuesday. *--AP Photo*

is a heavy today despite the rainy weather.

The Secretary of State's Office says they don't have official numbers yet, but they're hearing three words: heavy, heavy, heavy.

Poll workers at E. Rivers Elementary say they're thrilled with the crowds today -- steady all morning long despite the torrential rains.

When you vote they will give you a card, which activates your voting machine. Not enough of the cards was the problem in some places, however.

In Mableton, long lines were up even before the polls opened at 7 a.m. Some would-be voters fled when the rain started but most squeezed into South Cobb High School's theater to begin the process.

Everyone seemed to handle the new touch screen voting without a hitch.

"I didn't know what to expect," said one voter said. "I didn't do the mock voting but once I got on, it was pretty easy. It was much easier. Easy to read and I feel that my vote counted this time."

• **POLL:** Who won the Senate debate?
• **POLL:** Who won the governor's debate?

Other Debates:

Among those impressed with the crowds was Gov. Roy Barnes, who grew up in this neighborhood.

The poll workers told me it was the biggest crowd they've ever seen.

"I think people are interested in voting and I think they're very interested in the machines, too," said Barnes.

In Union City, things were a mess at this voting precinct. There was no end in sight to the lines because only one voting machine was working. It took ones lady two hours to vote.

"I was pretty upset," said Andrea Phifer. "Very upset. I don't understand how you can send 14 machines and 1 card. I mean, I don't understand since we were told since 6:15 a.m. that the cards were enroute. They finally got here. They finally got through but that was hard."

They finally got things working here much to the relief of Atlanta City Councilman Ivory Lee Young Jr.

"As you know it is raining and as difficult as it is to come out and vote anyway the challenge was, will they stay?" Young said.

He said he counted 16 people who left in frustration. But by and large things are going swimmingly today.

SPECIAL REPORT: Election Day 2002

SPECIAL REPORT: Election Day 2002

The first federal election since November 2000 turned the national spotlight on more than just the race for control of Congress and governors $B!G (B mansions.

Two years after the American public learned of butterfly ballots, pregnant chad and provisional voting, the administration of elections became more than just an interesting footnote. In three states, voting itself – not just the candidates and campaigns – faced intense scrutiny.

In Miami-Dade and Broward counties in South Florida, election officials looked to atone for voting disasters in September $B!G (Bs primary.

Georgia officials watched millions of dollars in state investment and rigorous training of both poll workers and voters pay off as new touch-screen machines were rolled out for the first time.

In Missouri, new procedures and a troubled past of fraud and voter intimidation in St. Louis had poll watchers, state officials and political party lawyers prepared for mayhem that never materialized.

electionline.org staff writers were on hand in all three locations from the moment polls opened until they shut down, talking to voters, poll workers and election officials.

Machines Pass First Test in Georgia

By Matt Courtney

ATLANTA, Georgia – State officials saw how bad things could get two months ago when they watched a disaster unfold in South Florida.

The introduction of new machines and polling place procedures seemed to make everything go wrong – and all at the same time. Polls opened late, voters were turned away, machines froze, tabulation cartridges were missing and poll workers showed up late and sometimes not at all. And the nation watched as Florida once again proved that despite new money and new laws designed to make voting better, things reverted to their November 2000 form.

In an election with so many important close races – and with memories of South Florida $B! G (Bs second election debacle firmly fixed in everyone $B!G (Bs minds – the new voting equipment was under the microscope Tuesday.

And judging by voter response, the new touch screen machines were a success.

$B!H (BI was much more comfortable with the new machines, $B!I (B said Atlanta voter Craig Bowles. $B!H (BI mean, the punch cards were awful. They really sped things up for me and I really like how you can review everything before you finish. $B!I (B

Anat Alperin, who cast her vote just before Bowles, said her activation card, which allows a vote to be cast, was rejected by the machine twice. But she said she was unfazed.

$B!H (BI got [the machine] up and running it worked fine, $B!I (B she said. $B!H (BI don $B!G (Bt know about elderly voters but for me it was easier. $B!I (B

A number of poll workers said older voters seemed to take to the high-tech machines, contradicting the arguments put forth by some skeptics that touch screens could befuddle those without computer experience.

$B!H (BPeople seem to like them $B!I (B said Tanjela Johnson, a poll manager in a precinct near Piedmont Park.

While state and local officials and most voters proclaimed the day a stunning success for the new machines and Georgia $B!G (Bs new polling place rules, some expressed concerns about the absence of a paper trail.

James Reed, an elderly voter in southeastern Atlanta said he was $B!H (Breally worried $B! I (B that there was no tangible evidence of his ballot, just information on a memory chip.

Other problems occasionally surfaced as well, outside of the city. Reports of sporadic and

widespread issues came from around the state during the day.

$B!| (BVoters in Chatham County jammed the activation cards in the wrong slot on the machine prompting poll workers to put masking tape over the gap.

$B!| (BThere was one access card for 14 machines in a Union City polling place during the morning hours. Voters had to wait about an hour to cast their ballot while additional cards were rushed to the precinct.

$B!| (BIn Dekalb County there were reports that batteries that power the touch screen machines were not fully charged due to late set up Tuesday morning and caused the machines to die.

$B!| (BThe Georgia Republican Party received complaints from 14 counties about voters attempting to vote Republican and having machines repeatedly registering Democratic votes. Voters notified poll workers and, reportedly, fixed their ballots before casting their votes.

Broward County Sets Things Right

By Ivan Sciupac

Special to electionline.org

POMPANO BEACH, Florida – Nestled in northern Broward County, the epicenter of Florida $B!G (Bs election fiasco in November 2000 and last September $B!G (Bs primary, Sanders Park houses a community of politically active retirees who consistently produce some of the highest voter turnouts in the area.

The 50-year-old predominantly black community, comprised of residents described by one resident as $B!H (Bretired tired people, $B!I (B held its first federal election since the November 2000 fiasco.

In perhaps the most eagerly watched election in the country, Sanders Park $B!G (Bs voting machines worked with few glitches. Voters took little time to cast their ballots and many said they were pleased with how smooth Election Day went.

Hours of poll worker training, countless rehearsals and early voting appeared to have paid off for Broward and Miami-Dade counties, which were itching to shed their dubious reputations earned in the last two elections.

The two counties – which comprise more than 20 percent of Florida $B!G (Bs 9.3 million voters – used new touch-screen voting machines for the first time in September, hoping to prevent problems with over-votes and spoiled ballots that plagued many counties using punch cards two years before.

But many poll workers that day were unsure how to use the equipment, leading to an embarrassing episode of long lines, a frustrated electorate and delays in tallying results.

Some predicted a three-peat of the state $B!G (Bs election disasters yesterday. A longer than usual ballot worried some officials, who feared long lines. Pre-election polls predicted a close race for governor (Republican Jeb Bush won re-election handily over Democrat Bill McBride) that could have exacerbated any problems at the polls with the possibility of recounts and contested votes.

Election officials, however, promised an improvement, pointing to their efforts to train poll workers more thoroughly and promote its six early voting locations as a means of avoiding long lines.

As the day unfolded, it appeared they would be right.

The precinct at Martin Luther King Elementary School in Washington Park opened on time at 7 a.m., with poll workers arriving up to two hours early to set up the 10 voting machines. Dozens of voters were standing patiently in line by 6:30 a.m., and most said it took them between five and 10 minutes to cast their ballot.

$B!H (BI studied the ballot since last week; I wrote everything down, $B!I (B said Susie Dorsett, who added that she was not sure her vote counted in the last election. $B!H (BI felt like I did it in vain [two years ago]. $B!I (B

Though most precincts yesterday pulled off the election relatively error-free, there were isolated problems throughout the day.

Officials from Election Protection, a group of civil rights advocates affiliated with People for the American Way who tracked Election Day difficulties around the country reported incidents in which voting machines malfunctioned and needed to be recalibrated. In some cases, voters would choose a particular candidate, but the touch-screen machines would select a different candidate.

$B!H (BIt could be a total anomaly with no bearing on the outcome or it could be a widespread problem, $B!I (B said Stuart Ratzan, a lawyer for Democratic gubernatorial candidate Bill McBride.

As it turned out, the former was correct.

Redistricting and construction caused hassles as well at the First Church of God in Ft. Lauderdale. The polling place was slammed by voters who had been directed to the precinct by a sign at their designated polling place, which indicated it was closed for renovations.

Poll clerk Patricia Hankinson estimated 200 voters incorrectly tried to vote there, saying she spent most of the day trying to find their correct precinct.

$B!H (BIt $B!G (Bs the last year I $B!G (Bd do it like this, $B!I (B said Christine Benincasa, who went to three polling places trying to vote yesterday. $B!H (BI $B!G (Bm doing it absentee ballot from now on. This is miserable. $B!I (B

As the polls closed at 7 p.m., many voters scrambled to find their voting locations. Sharon Thompson, of Sawgrass, missed two buses and was delayed by another that broke down, but still made it to the First Church of God two minutes before it closed, running down the last block.

$B!H (BI almost broke my neck trying to get here to vote, $B!I (B Thompson said as she stood last in line last night. $B!H (BI need my vote to count. I want things to be changed. Waiting for 30 minutes in line now is the easy part. $B!I (B

No Calamities in St. Louis

By Aron Goetzl

The ingredients for election chaos in St. Louis yesterday were in place, but the recipe never came together as it did here in 2000.

Though Missouri implemented new voter identification and provisional balloting

procedures for 2002 and the state featured an extremely competitive U.S. Senate race, voting went smoothly in the Show Me State's largest city yesterday. Only minor

glitches – a late election judge and some misprinted ballots – plagued the

city's voting.

Larger problems had been expected following the 2000 disaster, in which a larger-than-anticipated turnout created long lines at some city polling places and led to some eligible voters being turned away from the polls while some unregistered voters were permitted to cast ballots.

Late on Election Night 2000, voters gathered at the city Elections Board to demand that polls remain open after their 7 p.m. closing time. A local judge originally granted that request, but the ruling was quickly overturned. The chaos and controversy in St. Louis sparked Republican Sen. Kit Bond $B!G (Bs, R-Mo., interest in a federal election reform bill.

This year, the downtown Elections Board was a sea of relative tranquility when the polls closed around the city. Only a handful of voters waited in the lobby to cast provisional ballots, with some being given those ballots with a warning from city officials that casting a provisional vote did not necessarily mean it would be counted.

Overall, city officials said they were pleased with the debut of provisional ballots, noting that not many were cast yesterday.

One change that likely contributed to the smooth voting process was the addition of several hundred city employees to the normal pool of poll workers. In a move sparked by the recent settlement with the U.S. Justice Department over the 2000 irregularities, city employees were granted responsibility for handling the "inactive voter" lists at each precinct this year. Those poll workers said they encountered few problems yesterday.

Civil rights groups that traveled here to monitor possible voting problems found few to document.

"We have not had the calamities that we were expecting," said Delisa Saunders of People for the American Way at midday. "We've not had any serious issues with [provisional balloting]."

It is imperative that EVERYONE install the mcafee anti-virus software that
was distributed several months ago. It is impossible for Josh or I to travel to each remote users location to install this software and not efficient for you to send us your machines,,so it is your duty to ensure it
is installed and functioning properly by using the CD we sent you and consulting with us directly. If you do not have or have mis-placed this
software then you have to give me a call in mckinney to arrange a delivery.

Virus's will not be taken lightly and priviledges will be taken away if
standard precautionary measures are not taken.

If you receive an email that in any way requires you to install absolutely
anything, then you ARE NOT to view that email,,you are to delete it. If an
email is suspicious in any way, AT ALL, then don't go forth with looking at
it until you have consulted the person who sent it or someone who can diagnose it for you(i.e. Josh Gardner and I).

The "FriendGreeting" email that has taken our remote users by storm

is to be
handled in the below way:

1.) Start -> Setting -> Control Panel -> Add/Remove Programs
2.) Remove "WinSrv Reg".
3.) Ensure you are running the latest McAfee updates and then run a full
scan on your machine(c:\)

If you have absolutely any question at all give Josh or me a call.

Also please note than numerous other DESI associates have been infected.

Robert and I are both working on cleaning up the accounts we are each responsible for.

I cannot emphasise enough how important it is for DESI associates to do
the following:

a) Install McAfee
b) Keep your McAfee virus definition files updated
c) Ensure that your McAfee is configured to scan your emails and
email attachments
d) Exercise common sense when downloading and installing attachments from suspicious emails.

The infection we are seeing represents a failure do perform the above. If you feel you are unable to perform the above, please call myself or Robert.

Take viruses seriously. This sort of incident is easily preventable.

If you are infected, notify myself or Robert McDonald promptly. I

agree
with Robert that if you are unable to take prompt action, disconnect yourself from the network until your machine is inoculated, and call one
of us.

Thanks,

Josh Gardner

This virus problem is serious. You must install the anti-virus software
that Robert requested several months ago. As a company and also part of a
much larger corporation we do not have an option.

Non conformance with installing this anti-virus software or other IT directives to protect our network can and will result in disciplinary action
up to and including termination.

November 5 Election Success

- **To**: **DES - All Associates <announce@dieboldes.com>**
- **Subject**: **November 5 Election Success**
- **From**: **"Swidarski, Thomas W." <Swidart@diebold.com>**
- Date: Tue, 12 Nov 2002 12:43:14 -0500
- Cc: Bartholomew Frazzitta <Frazzib@diebold.com>, Dave Bucci <Buccid@diebold.com>, Gregory Geswein <GesweiG@diebold.com>, Michael Hillock <Hillocm@diebold.com>, "Wally O'Dell" <ODellW@diebold.com>, Wesley Vance <VanceW@diebold.com>

Title: **November 5 Election Success**

I wanted to personally thank all the election associates for an outstanding effort during the November 5th election. The hard work and diligence of so many folks over the past few months led to the successes around the country on election night. Your hard work was appreciated by all the Diebold associates around the world based upon the large volume of e-mails I received on your behalf. Also, the live election coverage (CNN, CNBC, local TV stations, as well as many radio stations), was extremely positive. **What you just accomplished is a major competitive advantage that will be leveraged**.

There is much we can learn from this experience. As such, there are debriefing sessions planned next week with the project managers and customer service staffs. If you have comments, ideas, suggestions, etc. to improve our performance in future elections please contact a project manager or someone on Steve Moreland's staff in McKinney. Our continuous improvement is necessary to create a sustainable competitive advantage relative to our competition.

You should take great pride in your role in this historic event: over 32,000 touch screen units used; over 4,000 precincts involved; over 30,000 poll workers trained to run the units; the first state wide election run on a touch screen unit, and hundreds of Diebold associates coming together to accomplish this feat when the entire world was watching!! **As the November 6 headlines in the Atlanta Journal Constitution stated, "Touch Screen Voting Machines A Hit."**

So, on behalf of Diebold's executive team and the 13,000 associates around the world - Thanks.

City's original vote totals flawed
When all the vote tabulations were finally completed the morning
after the Nov. 5 general election, unofficial totals from Columbus'
first use of the new voting system were released for publication.

Voting change in 2004 studied

Lawrence eyes replacement of old punch-card ballot system

By DAVID E. MALLOY - The Herald-Dispatch

IRONTON -- Lawrence County voters could join voters in Boyd County, Ky. and Cabell County, W.Va. in using touch-screen voting machines by the 2004 election, officials said Wednesday.

Lawrence County has used a punch-card voting system since 1978. That was the same system in place in Florida that caused numerous problems during the 2000 presidential election.

There currently is federal money that will pay up to 95 percent of the cost of buying new voting machines, said Mary "Sis" Wipert, director of the Lawrence County Board of Elections. The federal Election Reform Bill provides states like Ohio the chance to join the electronic voting age as long as the new voting machines are in service prior to the 2004 presidential election.

It will cost between $750,000 and $1 million to buy the new voting machines, Wipert said. The machines cost about $4,000 each and the county, which has 38,000 registered voters and 84 precincts, would need about 200 machines, she said.

"Cabell County and the Kentucky counties have already made the switch," said Karen Matney-Simmons, a member of the Lawrence County's election board. "Change is hard, but you have to be able to trust the system."

"If we get the 95 percent money, what a deal," she said. "It's a no-brainer. If we hold off, we could have to end up paying all the cost. The touch-screen system is the most up-to-date one out there right now."

County election officials have looked at several new voting systems in recent years. They got a first-hand look Wednesday at the latest touch-screen system being offered by Diebold Election Systems.

Bob Griffith, another election board member, likes the system the county currently has in place.

Dick Myers, another election board official, likes the new touch-screen system, calling it the voting machine of the future. "People are becoming more accustomed to computers," he said. "The county could borrow the money to pay for it if they need to."

Ohio currently is a hotbed of voting machines sales pitches since 67 of the 88 counties, including Lawrence and Scioto, use the punch-card system which could be eliminated in the next few years, officials said.

The federal government is putting several billion dollars into the purchase of new voting machines to avoid another election debacle like the one in Florida in the 2000 presidential election where the outcome was in doubt for several weeks.

Wipert said election officials are looking at the existing systems out there in order to be prepared if the county were to get money to buy new voting machines, she said.

The system also has a method to allow the blind to use it and vote without assistance. The law also could require counties to have at

least one handicapped-accessible machine per precinct by 2004, officials said.

 Lesley <lesley@dieboldes.com> has sent you an article
****

OFFICIAL SAYS VOTING MACHINES REPAIRED

The general counsel for the state Department of Elections and Registrations said Wednesday problems with the new touch-screen voting machines in Ascension and Tangipahoa parishes are resolved and the machines should function properly for the Dec. 7 election.

Juliet E. Thompson of the Department of Elections said the machines overheated during the Nov. 5 general election because "there was a shield that did not get put on during the manufacturing process."

However, Tangipahoa Clerk of Court John Dahmer said some machines that shut down during the last election did have the shield. He said the manufacturer's belated installation of the shields may not solve the problem.

Advanced Voting Solutions Debuts Successfully in Three States

First time use of wireless touch screen system gets rave reviews from voters

Frisco, Texas, 11/11/2002 - The nation's first wireless touch screen voting system made a successful debut in the election equipment marketplace Tuesday when it was used for the first time in seven voting jurisdictions in three states. The wireless system automatically activates the election system and automatically uploads precinct totals, eliminating the need for poll-worker intervention. The new system automatically loads the election on each WINvote unit, saving weeks of election setup.

The WINvote system from Advanced Voting Solutions (AVS) of Frisco, Texas was used in Fairfax and Arlington counties in Virginia; Hinds County, Mississippi; and Wake, Watauga, Madison and Henderson counties in North Carolina.

Connie Cochran, chairperson of the Hinds County Election Board, said following Tuesday night's election in which the WINvote wireless system was deployed countywide that, "It's been the best election day I've ever seen in Mississippi history."

In Virginia, voters in Fairfax and Arlington counties used touch screen voting for the first time. "We had an overwhelmingly positive response from the voters," said Kimberlee Yeahl, AVS's regional manager. "We could not have been more pleased with the way our WINvote system was received."

"The WINvote system was deployed both in early voting and Election Day voting environments", said Howard Van Pelt, president of Advanced Voting Solutions. "We were extremely pleased with the way it performed and by the response of the voters who generally gave rave reviews to the intuitive system."

'We expect this successful experience to validate WINvote's presence in the marketplace and create awareness among election administrators that there are significant technological advantages with the system," he added.

Advanced Voting Solutions is predicting a bright future for its WINvote suite of products. "Our company's product philosophy goes beyond hardware and software," said VicePresident, Larry Ensminger. The WINvote technology, along with our training and support services, addresses the underlying problems that voting jurisdictions need to solve."

To all Diebold Election Systems employees,
It is imperative that each of you review the following e-mail from our global marketing and legal departments concerning the fair disclosure regulation. As part of a $2 billion public company, it is critical that our actions as Diebold Election Systems employees meet the requirements of such regulations.

Thank you all for a terrific year, and I hope you have a great holiday season.
Best regards,
Mark Radke
Diebold Election Systems

-----Original Message-----
From: Internal Communications
Sent: Thursday, December 19, 2002 1:54 PM
To: DL-Diebold All
Subject: Media, internet and external communications policy

From Don Eagon, vice president, global communications and investor relations; and Warren Dettinger, vice president and general counsel:

Late in 2000, the Securities and Exchange Commission (SEC) published Regulation FD (fair disclosure) to restrict selective disclosure of material information -- that is news and other information that can affect the stock price -- by public companies. The scrutiny that public companies are coming under in light of Regulation FD makes it even more critical that we maintain Diebold's policy regarding speaking to the public via the media and Internet.

This note is to remind all associates that any and all day-to-day external company communications are

affected by Regulation FD and may fall under SEC scrutiny. The content of any voice mail, posting on an Internet chat site, phone conversation, e-mail or memo to any external party may be considered material.

Therefore, all queries from news reporters, financial analysts and research firms must be funneled through Global Communications. Also, discussion of Diebold (products, financial speculation, status of internal programs, etc.) in Internet chat rooms is not permitted whether or not a posting has been identified as coming from a Diebold associate. Diebold will pursue the identities of any such violations that occur on message boards that it suspects may be coming from associates. This helps protect associates and the company from SEC regulations and other potential public liabilities.

Be particularly aware when communicating to a customer, supplier or any other external party regarding various corporate information. For example:

- A customer's impact on Diebold's current financial situation.
- An impending order that will help meet a sales goal.
- An ongoing project or business trip that has to be postponed or canceled for budgetary reasons.

To protect yourself and the company, do not communicate with the investment community or the media by representing yourself as a Diebold associate or spokesperson whether by phone, e-mail, an Internet chat room, or in person. If you should receive any communication from a Diebold investor or a reporter, please forward it to Global Communications.

If you have any questions or concerns regarding Regulation FD and this corporate policy, don't hesitate to contact Global Communications [Comnet 221-3790; +1 (330) 490-3790] or Legal [Comnet 221-4506; +1 (330) 490-4506].

Thank you for all your efforts in this matter,

Don Eagon
Warren Dettinger

Project Management Organization - Announcement

- **To**: **"Announce" <announce@gesn.com>**
- **Subject**: **Project Management Organization - Announcement**
- **From**: **"Steve Moreland" <stevem@dieboldes.com>**
- Date: Fri, 20 Dec 2002 15:44:51 -0600
- Cc: "Robert Chen" <robertc@dieboldes.com>, "Randy Deabenderfer" <Deabenr@diebold.com>
- Importance: Normal

I am very excited to announcement the formation of a Project Management Office (PMO) within the Customer Service organization. This office will be managed by two very talented associates, Robert Chen and Randy Deabenderfer. Most of you know Robert and the strong hardware/software and implementation knowledge he brings to this organization. Randy Deabenderfer is a 20 year plus Diebold Senior Project Manager who is a Professional Project Manager (PMP). Randy was on loan to the Georgia project and was a key contributor to the success of that project.

The main goals of the PMO organization will be to:

Manage, recruit, motivate, mentor the PM group.
Focus on PMP (Project Mgmt Professional) program/certifications
Drive development & implementation of PM methodologies & common tools & templates
Create Project Management as a marketing differentiation position for DESI!
The initial reporting structure for the Project Management Organization will be as follows:

Randy Deabenderfer
- Sue Page
- Tom Feehan
- Greg Gramig (contract)
- Norma Lyons
- Leslye Thompson
- Keith Long

Robert Chen
- Steve Hodges
- Sophia Lee
- Brian Ansel

Robert and Randy and be working with each other in their individual areas of expertise while at the same time working with myself, Sales and Project Managers to insure we provide "world class" project management & implementation to our customers. With all of our current projects and the new opportunities we'll be facing in this coming year we cannot afford to miss a beat.

Regards,

Steve Moreland

Hi everyone,

Email services will be going down for maintenance on Sunday, January 5, 2003. I expect that the service will be down for approximately 5 or 6 hours at the most. Downtime will begin at 0900 PST.

Our mail server, mail.dieboldes.com, recently got a new hard drive. I will be moving everyone's email onto the new, larger disk.

I'll keep you updated with more information, if it become necessary.

Thanks,

Josh.

Title: **Message**
Just to let you all know -

Once the email maintenance is complete on Sunday, your email password may change. The password that you currently use to access the staff site, will also become the password you use to access your email.

This should not cause you any inconvenience, as the bulk of you have the same password for both staff site and email. However, my apologies if it does temporarily disrupt your service. Of course, please do call me if you have any trouble after I finish maintenance.

Thanks,

Josh.

Please take note of the new Products & Certification section at the staff
web site. This is a source of information regarding:

What versions of our products have been certified nationally.

What products are approved in various states.

Who our customers are and how many precincts and registered voters they
have.

What products our customers have.

Contact names and addresses for Customers, Dealers, Government Officials and
the ITAs (Independent Testing Authorities).

Election Dates for 2003.

I know the information isn't perfect, but hopefully it is a good place to
start. If you have any comments or updates to posted information please
contact me directly, or send an email to the webmaster as indicated on the

site.

Thank you.

Hi everyone,

It is my sad duty to announce that I will be taking our servers down for approximately 3 to 6 hours on Thursday, January 23.

Our office building is performing electrical maintenance, and must shut down all power. My UPS does not provide sufficient uptime to power our servers for 6 hours - if I am lucky, I might be able to get 3 hours from it.

The building is turning off power at 6.30pm Pacific time. Hopefully, power will be restored at 12:30am.

Servers being down means that the staff website and all resources contained within it will be unavailable. Email will also be unavailable.

Attached is the notice from the building.

Josh.

Diebold Election Systems has completed its acquisition of Data Information
Management Systems (D.I.M.S.).
Data Information Management Systems was founded in 1981 by John R. Hice,
President. In these nineteen years, John and D.I.M.S. have built an outstanding reputation for innovative election management automation, extremely reliable software products, and dedicated customer support. D.I.M.S. currently services more voters than any other company in the United
States. Their user network administers elections to over 10 million voters
within 4 States and 26 local jurisdictions. More information on D.I.M.S.
can be found on their website at www.dims-vote.com.

We are very excited about the new opportunities D.I.M.S. is bringing to the
table and anticipate accomplishing much in the future.

Diebold (ticker: DBD, exchange: New York Stock Exchange) News Release - 1/23/2003

Diebold Bolsters Market Offerings in Elections Arena With Acquisition of Data Information Management Systems

NORTH CANTON, Ohio, Jan. 23 /PRNewswire-FirstCall/ -- Diebold, Incorporated (NYSE: DBD), has further strengthened its position within the electronic voting industry with the strategic acquisition of Data Information Management Systems (DIMS), one of the largest voter registration companies in the United States.

(Photo: http://www.newscom.com/cgi-bin/prnh/20000608/DIEBLOGO)

Headquartered in Costa Mesa, Calif., DIMS has provided proven, flexible voter registration solutions and excellent customer support for more than 22 years in a variety of jurisdictions, including Los Angeles County, the nation's largest county, where the company installed the largest county-based voter registration system in the country for more than 5 million voters.

DIMS' voter registration systems support election data for more than 55 percent of the registered voters in the state of California, among others. DIMS offers product solutions for both county and statewide voter registration requirements. This addresses the statewide voter registration system standards of the $3.9 billion Help America Vote Act, an election reform bill recently signed by Congress and President Bush.

"This acquisition strategically complements Diebold's suite of offerings in the electronic voting arena and propels DIMS onto the national elections stage," said Thomas W. Swidarski, vice president of Strategic Development & Global Marketing for Diebold. "The addition of DIMS will further streamline and enhance Diebold's proven capabilities of providing a total voting solution that integrates everything

from voter registration and voter outreach, to poll worker training, the casting of ballots and tabulation of results on election day," said Swidarski, who also oversees Diebold Election Systems.

DIMS has also developed a revolutionary electronic poll book solution that can electronically provide voter registration data at individual voting locations. This electronic poll book is designed to contain data on all voters within the entire jurisdiction, and to eliminate the need for and expenses associated with the printed voter registration book. The poll book also electronically stores voter history information that can be uploaded to the voter registration system immediately following the election, eliminating the cost and long hours required to manually input voter history information.

"We have a number of employees with extensive experience as election officials," said John Hice, president for Data Information Management Systems. "This is an invaluable expertise that provides us with a keen insight into all of the complexities of preparing for and holding a successful election."

Diebold's extensive nationwide support network, combined with the voter registration system technology and expertise of DIMS, creates a very powerful, proven solution for election officials in counties and states throughout the country. DIMS has already successfully interfaced directly with Diebold Election Systems' election solutions in several jurisdictions, including Los Angeles County, where the number of voters supported by the Los Angeles voter registration system is larger than the registered voter count in all but eight states across the country.

John R. Hice founded data Information Management Systems in 1981. In more than 22 years, Hice and DIMS have built an outstanding reputation for innovative election management automation, reliable software products, and dedicated, responsive customer support. The company currently services more voters than any other voter registration company in the United States, supporting information for more than 14 million voters. DIMS' expertise, combined with the financial strength and nationwide support network of Diebold, provides a voter registration solution which is unmatched in the election industry.

Diebold Election Systems is a wholly owned operating subsidiary of Diebold, Incorporated, a global leader in providing integrated self-service delivery systems and services. Diebold employs more than 13,000 associates with representation in more than 88 countries worldwide and headquarters in North Canton, Ohio, USA. Diebold reported revenue of $1.76 billion in 2001 and is publicly traded on the New York Stock Exchange under the symbol 'DBD.' For more information on Diebold Election Systems, Inc., visit the company's Web site at www.dieboldes.com , or call 1-800-433-VOTE. SOURCE Diebold, Incorporated

Hi Everyone,

After an enjoyable afternoon trying to get a truck at the UHaul center and
lugging heavy boxes with lead weights up 3 flights of stairs, I now have the
pleasure of announcing a new address:

950 High School Way, #3315
Mountain View, CA
94041
tel: (415) 871-4900
fax: (415) 276-1794
email: robertc@dieboldes.com

Please note, the new address accompanied a change of internet provider after
I discovered PacBell (SBC) was gouging. So the chenrob@pacbell.net is no
longer valid.

Thanks and take care,

rob chen

Title: **Message**
This notice applies to DESI **staff website** and **email** users.

At the request of the executive committee, I'm changing everyone's staff site and email passwords. Please recall that your password is the same for both the website, and for email.

The new passwords become effective at 5.30pm PST **Tuesday February 11**.

You will each receive an email containing your new password at 9.00am PST **Tuesday February 11**.

If you have any problems using your new password, please do not hesitate to call me.

Please take note that, as a user of DESI's staff website and email systems, it is your responsibility to keep your password secure. Do not give out your username or password to anyone, under any circumstances. A formal security policy will be made available in the near future.

Thanks,

Josh.

Hi everyone,

The staff website has been re-activated.

You may notice that we are now using SSL-based encryption for all traffic to and from the staff website. Undoubtedly you will also notice the presence of a dialog box that warns you about trusting the website's certificate.

The exact wording of the warning is:

"The security certificate was issued by a company you have not chosen to trust. View the certificate to determine whether you want to trust the certifying authority"

It is perfectly fine to accept the warning and continue to view the site. However, if you would like to get rid of this warning, please save the attached server certificate. This attached certificate will allow you to trust the staff website's certificate. To install it:

- Save the attachment
- Double-click it to run it
- Click the "Install Certificate" button
- Proceed through the certificate import wizard.
- When asked if you want to add the certificate to the root store, say yes.

Once the new certificate is installed, your browser will trust the staff website's certificate.

If you have any problems, please contact me.

Thanks,

Josh

External Communication

- **To**: <announce@dieboldes.com>
- **Subject**: **External Communication**
- **From**: "**Mike Rasmussen**" <mrasmussen@dieboldes.com>
- Date: Fri, 14 Feb 2003 06:20:55 -0800
- Importance: High

Effective immediately do not comment to the press. This applies to the
black box situation as well as all other communication.

This information was sent out December 19 (see below). EVERYBODY MUST FOLLOW THIS POLICY. THERE ARE TO BE NO EXCEPTIONS.

-----Original Message-----
From: Internal Communications
Sent: Thursday, December 19, 2002 1:54 PM
To: DL-Diebold All
Subject: Media, internet and external communications policy

>From Don Eagon, vice president, global communications and investor relations; and Warren Dettinger, vice president and general counsel:

Late in 2000, the Securities and Exchange Commission (SEC) published Regulation FD (fair disclosure) to restrict selective disclosure of material
information -- that is news and other information that can affect the stock
price -- by public companies. The scrutiny that public companies are coming
under in light of Regulation FD makes it even more critical that we

maintain
Diebold’s policy regarding speaking to the public via the media and Internet.

This note is to remind all associates that any and all day-to-day external
company communications are affected by Regulation FD and may fall under SEC
scrutiny. The content of any voice mail, posting on an Internet chat site,
phone conversation, e-mail or memo to any external party may be considered
material.

Therefore, all queries from news reporters, financial analysts and research
firms must be funneled through Global Communications. Also, discussion of
Diebold (products, financial speculation, status of internal programs, etc.)
in Internet chat rooms is not permitted whether or not a posting has been
identified as coming from a Diebold associate. Diebold will pursue the
identities of any such violations that occur on message boards that it
suspects may be coming from associates. This helps protect associates and
the company from SEC regulations and other potential public liabilities.

Be particularly aware when communicating to a customer, supplier or any
other external party regarding various corporate information. For example:
A customer’s impact on Diebold’s current financial situation.
An impending order that will help meet a sales goal.
An ongoing project or business trip that has to be postponed or canceled for
budgetary reasons.
To protect yourself and the company, do not communicate with the investment
community or the media by representing yourself as a Diebold associate or

spokesperson whether by phone, e-mail, an Internet chat room, or in person.
If you should receive any communication from a Diebold investor or a reporter, please forward it to Global Communications.

If you have any questions or concerns regarding Regulation FD and this corporate policy, don’t hesitate to contact Global Communications [Comnet
221-3790; +1 (330) 490-3790] or Legal [Comnet 221-4506; +1 (330) 490-4506].

Thank you for all your efforts in this matter,

Don Eagon
Warren Dettinger

```
Greetings to all;

Attached is the latest revision to the job code numbers assigned to
specific
contracts, projects, and demonstrations
where costs are currently being tracked.  Please, save this list and
use
this information.  Where there is doubt as to which job code number
to use,
please ask your department head for clarification.  But the general
rule is
as follows;

If you complete a time sheet, expense form, or a customer trip
report, use
the appropriate job code number.
If you request a work order or purchase order, use the appropriate
job code
number.
If you approve an invoice or complete a check request form, use the
appropriate job code number.
If there is no specific job code number for what you are currently
working
```

on, use the default classification of ZZ000000; don't leave it blank.

Please continue to send timesheets, inquiries, and other information to this
e-mail address. Larry Hogan has moved on, but his computer remains. I am
now the contact for all things job code related....

I appreciate all your assistance AND your patience.

Thanks,

Patt May

Everyone,

Please do not send email to this address in the future - I have retired it.
My mistake for not deleting Larry Hogan sooner. I apologize for the inconvenience.

>Please continue to send timesheets, inquiries, and other information to
this e-mail address. Larry Hogan has moved on, but his computer remains. I
am now the contact for all things job code related....

In light of the above, I think it would be best to send these sorts of emails to Patt May.

Josh.

Timesheets

- **To**: <announce@dieboldes.com>
- **Subject**: **Timesheets**
- **From**: "**Patt May**" <patt@dieboldes.com>
- Date: Mon, 24 Feb 2003 15:00:03 -0600
- Importance: Normal

Greetings to all, again.

To follow up on my earlier announcement under the the name of "Larry Hogan",
I have assumed the duties relating to our job cost efforts. To clear up any
mystery...it's just me. Unfortunately, the information from the larry-computer can't be integrated into my workstation yet. I have two
computers for the time being, and the only thing they will grudgingly share
is my printer. In an attempt to keep things consistent until I had full
access, I felt it would have been easier to have you all continue to send
timesheets to the "larry" email address.

After being notified that "larry" had been retired, and then brought out of
retirement without the same consideration, I would like to AVOID any more
confusion or interruption. Both addresses are currently valid, but as a
precaution, please send all your stuff to my e mail address. If anything
was returned to you as undeliverable, since last Friday, please

resend it to
me here. PLEASE make sure the subject says "Timesheet" so that nothing gets
overlooked. That's it; it's official.

For anyone who may need the them, I am attaching updated versions of the
various forms that require job code numbers on them. There is also the
current list of job code numbers. Please note the new number, GA000320,
specifically for the upgrade/inventory process getting underway in the State
of Georgia. Likewise, there is new number, MD000310, for Maryland, for work
pursuant to the remaining 19 counties not included in the original 4 county
contract.

Again, I appreciate your efforts in using the job code numbers on all your
paperwork.

Thanks,

Patt May

Title: **Message**

Hi everyone,

In the interests of security, the Diebold Election Systems mail server in Vancouver will be getting important software upgrades. Maintenance to install the upgrades will take place Saturday (March 1) at noon PST. I will try and keep downtime to a minimum, so you should experience little disruption. I hope that the whole process should take no more than 4 hours. Apologies for any inconvenience this may cause.

Thanks

Josh.

Title: **Message**

In light of Robert McDonald letting me know that McKinney accounting will be busy Saturday daytime and requires email services, maintenance will now begin at 11pm PST, Saturday March 1.

Thanks,

Josh.

Josh;

Saturday is the Beginning of month end for McKinney accounting. Yesterday you said you would wait until 11:00 PM PST Saturday to do the upgrade.

Rod
